I agree - have you heard that running IBOC would reduce the wattage of the broadcaster ? I have never heard of that, and I doubt it. I know that IBOC sidebands are only transmitted at 1/100 of the wattage of the analog main lobe...

This guy is unbelievable - what a salesman ! I wonder, if he ever
dabbled in used cars ? Hey bud, we'll see - to try and mandate that
all future AM/FM radios be able to receive/procees IBOC is absurd !
IBOC is going to save AM/FM - what a fucking joke ! I am sure many
people, including myself, are perfectly happy with AM/FM, as it is; if
anything, new programming formats will "save" the airwaves, not some
crummy new broadcasting transmission technology !

You are right... I suppose they could care less, but that is unlikely. They
care not a tad.

1652. HD-IBOC - The Death of AM/MW Radio Listening . . .

Newsgroup: rec.radio.shortwave

> decent analog radio, both AM and FM, if you give it a decent antenna.
> (the antennas provided with the radio are crap) Of course, it is pretty
> expensive as well!
>

- Of course, the problem for the radio industry is that
- almost nobody *has* a Receptor HD - when the
- interference cranks up, people will buy XM or Sirius,
- put in a CD, or turn on the TV long before they'll buy
- a HD radio.

DS [W9WI] - Yes in spite of the idea behind HD-IBOC
AM/MW Broadcasting as being the 'savior' of AM Radio.
Many DX {Out-of-Area} Listeners may simply Turn-Off
the AM Radio and Turn-On something else. ~ RHF

In the SF Bay currently I can hear many Out-of-Area
AM/MW {Analog} Radio Stations like :
Sacramento - KSTE 650 kHz and KFBK 1530 kHz
Fresno KRE 580 kHz
With HD-IBOC these AM Signals will be under the
Digital Signal Hash an no longer be able to be heard.
* With HD-IBOC these AM Signals will be under the
Digital Signal Hash an no longer be able to be heard.
* Local Only - HD-IBOC will result in about 30 AM
Radio Stations that could be heard easily with 6-7
of those being so close to the each other that the
number may even be smaller.

In the Twain Harte, CA currently I can hear many
Out-of-Area AM/MW {Analog} Radio Stations like :
Sacramento - KSTE 650 kHz and KFBK 1530 kHz
Fresno KRE 580 kHz
* With HD-IBOC these AM Signals will be under the
Digital Signal Hash an no longer be able to be heard.
* Local Only - HD-IBOC will result in about 9 AM
Radio Stations that could be heard easily.

Funny you put it that way because that's the way I remember it too. The last time I listened was maybe ten years ago. He kept talking the McVeigh & nickols story and played that stupid steam boat Swaney River over & over. And power beams from space trying to talk control of him or some such thing.

The only stations I can get at night are KNX and a bunch of
out-of-market stations e.g. KGO and KKOH. (Yeah, I can get KSL and
KFBK, too, but they suck). KDWN has some choice moments on occasion.

1672. The Worst Defense

Newsgroup: rec.radio.shortwave

The Worst Defense

It's been an interesting couple of weeks for looking at the war against the Islamo-fascists and other enemies of the United States. North Korea attempted to launch an Intercontinental Ballistic Missile capable of reaching American shores and one day carrying a nuclear warhead. Both technologies were made available to the North Koreans to put the best possible face on it by lax security controls and diplomatic follies during the Clinton administration. To allay public distress over the missile launch, President Bush announced that anti-ballistic systems the United States was developing provided us with a good chance of intercepting the Korean missiles. Perhaps by the time the North Koreans achieve this capability, our anti-ballistic missile shield will be in place.

But this is also no thanks to Democrats who have waged a ferocious 25-year war against the building of an anti-ballistic missile defense. The entire liberal arsenal was launched against this program, right at the outset with the mockery of Reagan's Star Wars initiative and reached a crescendo when the Democrats supported Soviet objections to scrapping the SALT II agreements and later to Russian objections to withdrawing from the defunct ABM Treaty which would have prevented us from finishing the SDI program. Left to Democrats, in other words, America would have no defense against the maniac in Pyongyang, Kim Jong-il.

You have a disease called amnesia caused by propaganda brainwashing.

"From April 1995 through the time of the Khobar Towers bombing in June 1996,
the analytic community [CIA] published more than 100 products on the topic
of terrorism on the Arabian peninsula," the report stated, including
specific intelligence warnings that the Khobar Towers complex was under
surveillance by Iranian intelligence agents and local surrogates.

The intelligence reports contained specific warnings of "ongoing Iranian and
radical Islamic fundamentalist groups' attempts to target American
servicemen in the Eastern province of Saudi Arabia for terrorist acts"
...
In April 1996, Schwalier met with the CIA station chief in Riyadh...

The CIA man said the U.S. suspected the explosives were being "transferred"
to Saudi Arabia, or were "passing through" Saudi Arabia, and that a Saudi
"dissident financier" named Osama Bin Laden was likely involved. But he made
no mention of Iran or of any potential threat to Dhahran.
...
"Contrary to what the intelligence community may have suggested, I was never
advised of a specific terrorist threat to Khobar Towers"
...
http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=23049

Khobar Towers: Iran's involvement

http://intelligence-summit.blogspot.com/2006/06/khobar-towers.html

"One way or the other, we are determined to deny Iraq the capacity to
develop weapons of mass destruction and the missiles to deliver them. That
is our bottom line." - President Clinton, Feb. 4, 1998

"If Saddam rejects peace and we have to use force, our purpose is clear. We
want to seriously diminish the threat posed by Iraq's weapons of mass
destruction program." - President Bill Clinton, Feb. 17, 1998

"We must stop Saddam from ever again jeopardizing the stability and security of his neighbors with weapons of mass destruction." - Madeline Albright, Feb 1, 1998

"He will use those weapons of mass destruction again, as he has ten times since 1983."
- Sandy Berger, Clinton National Security Adviser, Feb, 18, 1998

"[W]e urge you, after consulting with Congress, and consistent with the U.S. Constitution and laws, to take necessary actions (including, if appropriate, air and missile strikes on suspect Iraqi sites) to respond effectively to the threat posed by Iraq's refusal to end its weapons of mass destruction programs."
Letter to President Clinton. - (D) Senators Carl Levin, Tom Daschle, John Kerry, others, Oct. 9, 1998

"Saddam Hussein has been engaged in the development of weapons of mass destruction technology which is a threat to countries in the region and he has made a mockery of the weapons inspection process."
- Rep. Nancy Pelosi (D, CA) , Dec. 16, 1998

"Hussein has chosen to spend his money on building weapons of mass destruction and palaces for his cronies."
- Madeline Albright, Clinton Secretary of State, Nov. 10, 1999

"We begin with the common belief that Saddam Hussein is a tyrant and a threat to the peace and stability of the region. He has ignored the mandate of the United Nations and is building weapons of mass destruction and the means of delivering them."
- Sen. Carl Levin (D, MI) , Sept. 19, 2002

"We know that he has stored secret supplies of biological and chemical weapons throughout his country."
- Al Gore, Sept. 23, 2002

"Iraq's search for weapons of mass destruction has proven impossible to deter and we should assume that it will continue for as long as Saddam is in power." - Al Gore, Sept. 23, 2002

"We have known for many years that Saddam Hussein is seeking and developing weapons of mass destruction."
- Sen. Ted Kennedy (D, MA) , Sept. 27, 2002

"The last UN weapons inspectors left Iraq in October of 1998. We are confident that Saddam Hussein retains some stockpiles of chemical and biological weapons, and that he has since embarked on a crash course to build up his chemical and biological warfare capabilities. Intelligence reports indicate that he is seeking nuclear weapons."
- Sen. Robert Byrd (D, WV) , Oct. 3, 2002

"I will be voting to give the President of the United States the authority to use force - if necessary - to disarm Saddam Hussein because I believe that a deadly arsenal of weapons of mass destruction in his hands is a real and grave threat to our security." - Sen. John F. Kerry (D, MA) , Oct. 9,

2002

"There is unmistakable evidence that Saddam Hussein is working aggressively to develop nuclear weapons and will likely have nuclear weapons within the next five years . We also should remember we have always underestimated the progress Saddam has made in development of weapons of mass destruction." - Sen. Jay Rockefeller (D, WV) , Oct 10, 2002

"In the four years since the inspectors left, intelligence reports show that Saddam Hussein has worked to rebuild his chemical and biological weapons stock, his missile delivery capability, and his nuclear program. He has also given aid, comfort, and sanctuary to terrorists, including al Qaeda members . It is clear, however, that if left unchecked, Saddam Hussein will continue to increase his capacity to wage biological and chemical warfare, and will keep trying to develop nuclear weapons."
- Sen. Hillary Clinton (D, NY) , Oct 10, 2002

"We are in possession of what I think to be compelling evidence that Saddam Hussein has, and has had for a number of years, a developing capacity for the production and storage of weapons of mass destruction."
- Sen. Bob Graham (D, FL) , Dec. 8, 2002

"Without question, we need to disarm Saddam Hussein. He is a brutal, murderous dictator, leading an oppressive regime . He presents a particularly grievous threat because he is so consistently prone to miscalculation . And now he is miscalculating America's response to his continued deceit and his consistent grasp for weapons of mass destruction . So the threat of Saddam Hussein with weapons of mass destruction is real."
- Sen. John F. Kerry (D, MA) , Jan. 23. 2003

Here's one for you Eduardo..

Out in Richfield, Utah, we had a single local station. Almost nobody
listened to it, preferring instead to listen to much more distant Salt Lake
stations. And those Salt Lake stations most certainly did have regional
advertisements, even for local/semilocal businesses like car dealerships,
etc. Mind you, there were SOME listeners of the local station, mainly those
farmers that wanted the farm news.

No, that is called C.Y.A., especially since I was "negged" by a non-paying bidder who was bidding on a lot of auctions he was not paying for. I left him a negative and he turns around and did the same to me. Now if I would had been smart and did what I do now my feedback would be a lot better. Same with the guy who left me a negative 2 months after the fact.

And you might want to check first before you go and trash people on usenet. We have had numerous discussions on the 8-track group. I used to think somewhat highly of you but not anymore. Have fun stalking Nudo.

Name is David Eduardo, like Billy Bob. You would not call Billy Bob just
plain "Bob" would you?
>
> Out in Richfield, Utah, we had a single local station.

That area looks like it has about a dozen FMs giving primary service now,
including two in Richfield, several more in Price and a bunch in places like
Manti, etc.

> Almost nobody listened to it, preferring instead to listen to much more
> distant Salt Lake stations.

I would assume that most listen to the plethora of local FMs now.

> And those Salt Lake stations most certainly did have regional
> advertisements, even for local/semilocal businesses like car dealerships,

And today? I would imagine that most people under their mid-40's won't put up with anything on AM and would prefer the local FMs over some distant AM.

I rather doubt you'd be able to get 1360 up in MI, Ace,
even without IBOC. Not that it's not possible, but
IIRC, 1360 isn't a very strong signal.

Kinda the way I see it, too. If they didn't care about losing listeners
outside their "market", then why would they give a damn about pirates?

Pirates are a concern in a specific market to the stations licensed in that
market.

Radio is a local medium, and ad sales are based on local metro ratings. Even
stations that do well in ratings in adjacent markets generally get no
benefit from this audience. An example would be KLVE, which is an LA station
(#1 or #2 there) is also in the top 5 most of the time in Riverside/San
Bernardino, but does not get any additional revenue from this out-of-metro
audience.

True, it is possibly a harmonic he's hearing, but it's probably R. Verdad. There are some nights when it seems as though they use a directional antenna and are beaming it north, it comes in that good here, compared to other times. According to the director, they have received reception reports from all over the world.

Interestingly enough, with the QSL they included an info sheet on achieving better reception of R. Verdad, if you're in Guatamala!

They seem to ID on the half hour (I've always heard it then, anyway). The program schedule I have lists the "Back To Jesus Broadcast" in English on Saturdays at (local time) 5:10 to 5:25 am, 7:00 to 7:15 am, 6:00 to 6:15 pm and 10:15 to 10:30 pm. Also "Spiritual Songs" in English Saturdays at 11:00 pm. I have no idea if Guatamala uses Daylight Time, but its -6 hours from UTC Keep trying, you'll get them eventually.

Hope this helps.

Radio is supposed to serve the public while selling ads. Part of
serving the public is caring about people who listen, regardless of
whether you can monetize every listener.

There is no way to serve listeners that are a two hour drive away from one's
licensed city and market.

We are talking about Rush "The Confirmed Drug Addict" Limbaugh right?

The hypocrite that hasn't met a pill that he hasn't popped.

With the Viagra he has, I really want to know who is desperate enought
to do this guy....Ann Coulter?

So AM stations become cheaper to buy and thus less corporate influence.
So the problem is?????

This from the October 2004 edition of "Tattler":

Univision's David Gleason told the crowd that radio should focus on listeners,
not on the market.

1713. Getting local AM station engineering aware of harmonic problems

Newsgroup: rec.radio.shortwave
Date: 2006-07-11 12:47:12 UTC
From: shoppa@trailing-edge.com
Message-ID: <1152622032.290345.201220@p79g2000cwp.googlegroups.com>
Source record: 82948

I have a local MW station (630 WMAL) that is radiating harmonics (1260, 1.890, etc.) on up the spectrum.

The harmonics are strong enough that 1260 AM (also a local station) is unlistenable for about a mile surrounding WMAL's towers. It's also an irritation throughout the SW bands.

I am rather certain that the harmonics are coming out of the transmitter and not the result of local rectification (near or in the receiver) because building a trap for 630kHz has no effect on the harmonic and the harmonic is present over a very wide area.

My first attempts (calling the station, writing a letter) have been met with no acknowledgment that there is a problem (it is not even obvious that anyone understands that there MIGHT be a technical issue to pass on to engineering.)

Any advice?

Tim.

We had a similar circumstance with a new tower in Algonquin shared by three stations, the mix products of which completely wiped out our station in a very hot zipcode for us.

We started by getting listener complaints from the stations being interfered with, us and one other on the tower.

That would be you.

Then they sent me out to record some audio in the area of interference, and that was followed by the Cheap Engineer doing some field strength readings.

Phone calls to the offending stations were not returned, or acknowledged.

The package was then sent to our corporate lawyers, who sent it to FCC for resolution.

Things jumped pretty quickly from there.

The key was that we were a local station, and this was pretty significant interference to the local audience.

So...you need to gather your facts. And tapes would be good, if you can get them, (especially during a spot break...get the tail end of the programming, capturing the calls, and then a string of spots that are difficult to hear with all the trash, then back into programming again capturing the calls,) and contact the station being interfered with. They can take the complaint to the FCC a lot quicker and with more certainty than you can. Explain to them (and you may need to talk to two or three people inside to get the right attention) that you're a local listener, and that you cannot listen to their station because of interference from the offending station. I'd contact the Cheap Engineer, first. Then the General Mangler. And if you get nowhere there, go to over his head to the real power in the building: the Sales Mangler.

You tell a Sales Mangler that his prime inventory isn't being heard in a local area, and he'll have the National Guard on the property within the hour.

If you STILL don't get satisfaction, then take it to the next level. Talk to someone at the home office. Or better still, start talking to advertisers on the station being interfered with....Start with Coca-Cola. Coke will get their attention, but quick. Just make sure you're out of the way. You don't want to get any on you.

After you've made your noise with the station, contact the district office of FCC, and make your complaint to them, as well. That will reinforce the station's action.

If station is being sold then maybe potential new owner would like to
hear that signal is AFU. Perhaps you contact them and they will have
present owner fix before papers signed.

If that doesn't work then here's what I would do. Get yourself some
spraypaint, gasoline and an old mattress. Spraypaint a small blurb
about a dirty signal on the side of the radio station. If is located
in an urban area this is even better. Throw the mattress down and soak
with gasoline and light her up. Call up a few local TV station and
tell em the studio is on fire. They will send a crew over and film the
mattress and the blurb you wrote on the side of the building and a good
chance it will be fixed right away.

Source record: 82952

I concentrate on finding out who the chief engineer is and contacting him.

Find other stations the company owns, and look for the chief engineer of
any of those, and contact them asking who the CE is of your station.

Sooner or later you can find out a name, and it's possible the CE is
in fact interested.

There's an enormous chain of management that does not care, however, so
usually you can't get anywhere through obvious channels.

Getting the FCC interested is very hard.

WRFD 880 in Columbus OH has been radiating on WJR 760 Detroit MI for years
and I haven't gotten anywhere yet, so it doesn't always work. WRFD is
authorized by God so they don't care. (2*820-880=760 ; 820 is another
local station, an odd fact that would interest a genuine engineer.)

AM radio, as we know it is fading away - just like so many other things we grew up with. Those days of listening to some distant radio signal coming via the ionosphere - fading in and out like the surf on the sea are slipping fast.

Out-of-control technology is reducing the quality of life - not improving it. If you don't believe this just consider the fact that you have absolutely no privacy anymore. Everything about you is in some database somewhere. In addition to that, you can't go very many places where you're not on camera either.

Hi Tech isn't all that great when you consider what it has become. The demand for it isn't always there but we get it anyway. Funny thing - most users don't really understand it, they just know they want it.

Slick marketing creates the demand and the dollar rules.

I wouldn't discount AM radio yet - there are thousands of AM stations
on the air still.

You don't even know what that means.

It means pay attention to the listeners themselves, not the "trends" and
stuff in the market itself... rumor and heresy and insider remarks.

Having a harmonic within a mile of a transmitter is not particularly
unusual. And a mixing product is common where several transmitters are
located within a few miles.

SC, if you wanted to really figure out why I HATE Chuck Harder (and I do not use that all-caps word lightly), you had to have listened to his second hour yesterday, when he had on Doctor Jerome Corsi (another tinfoil hat psycho). Chuck and Jerome claimed that the Bush Administration is plotting to end the U. S. of A. as we know it, via an evil document signed by Bush, Vincente Fox of Mexico and the prime minister of Canada on March 23, 2005, called the "Security and Prosperity Partnership" (SPP) initiative.
According to Chuck and Jerome, the SPP will quickly lead to a three-nation currency (the "Amero"), the dissolving of the borders between the U.S., Mexico, and Canada, and a "super-government" overseeing all three. The U.S. Constitution will be voided, to be replaced with something very much like what the E.U. is considering.
Other political entities pushing this insane conspiracy theory? None other than the John Birch Society, that paragon of Americanist conservatism that claimed back in 1958 (the year I was born) that President Dwight D. Eisenhower was a Communist.
The really tragic thing about all this is that Chuck was saying the exact same things about Dubya's daddy back in 1992; back then, Bush Sr. was plotting to set up a world government, the so-called "New World Order," according to Chuck.
Chuck will never learn.
Naturally, there is absolutely nothing to the SPP conspiracy theory.
One telltale sign is how defensive Dr. Corsi got as he was spinning his wheels; he said over and over again that "this is no conspiracy theory." That's a dead giveaway that it is indeed a conspiracy theory.
Look, SC, you may not agree with me, but this "michigoss" (Yiddish for "crap") is not conservatism. It is lunacy, draped in the 'Merican flag.
No one in their right mind would fall for it. If it were true, every reporter, pundit, Congressman, and Senator would be all over the Bush Administration. Remember Dubai? This would be a million times worse!
Don't you think that if it were true, Rep. Tom Tancredo (R-CO) would put it at the top of his Web site?
Do you know what Rep. Tancredo's big issue is right now?
"Tancredo Discusses Sierra Leone Issues with Isaiah Washington."

No, I'm not making this up. And no, I do not know who Isaiah Washington
is.
QED!

That is one phrase, taken out of context. It makes a nice headline. The year before, when I said "Spanish is a language not a (radio) format" it also go t a headline.

The statement, in the context of the Super Session at NAB where I said it, meant to focus on individulal listener needs, not perceived "groups" of listeners. Program to the listener one by one, and you will get the groups of listeners because the groups are made up of individuals. When I am training announcers, as I also mentioned at NAB, I often tell them to put up a picture of a typical listener... maybe cut out of a picture from a station event... and speak to that person as if they were the only listener.

Now you get it?

David,

In 5-10 years all you will be able to Hear is nothing but
hash, Hash. HASH ! from both short and long distance.

KFHK 1530 kHz from Sacramento, CA has the
"Rush-Re-Play" :o) - For all those, who work
during the day and can not listen.
http://www.kfbk.com/pages/programschedule.html

KSL 1160 kHz from Salt Lake City, UT
Does have "When Radio Was"
http://www.radiospirits.com/onradio/wrw_future.asp
- Hosted by Stan Freberg
http://www.ksl.com/index.php?nid=312&sid=122030
Plus the "Twilight Zone on the Radio" Show
http://www.twilightzoneradio.com/

A GREAT IDEA !
Always thought a that the AM Radio Station
that 'replayed' "Coast-to-Coast AM" During the
Morning from 9-12 -or- during the Day from 12-3
would tap a unique Day-Time group of Listeners.

Radio - It's About Listening and Your Ears Don't Lie [.]

david - enjoy your radios ~ RHF
.
.

KFBK was a much better station when I was a kid, as was KSL.

Stan Freberg is on AM 1260 (and FM 105.1 HD2) here.

XM and Sirius carry the Stacy Keach Twilight Zone.

George Noory is on KFI but all I get is the skywave fighting with the
groundwave at my house so I have to listen on 780. Or 770. Or 840.
You get the idea.

Great. Click on the L.A. thread and see Dwardo bad-mouthing the
competition.

FYI AM 1260 is simulcast on the second stream on 105.1 HD and covers
all of Los Angeles. This is what HD is good for.

how so?

it allows me to live 15 miles from the nearest town and still know what
is going everywhere I want to know most of the news I don't even have
to go looking anymore I hve told the PC to look and find it

I have my job that used to require tolive in a major urban area with a
much higher costof liveing in both money and having to deal with crime

What will the death of AM be like? Will we someday turn on our AM radios
and hear nothing but noise and static, much as the surviviors did in any one
of Roger Corman's post apocoplyse movies?

AM stereo didn't need Leonard Kahn to fail. The public never cared much about it, Kahn nothwithstanding. But he did provide a convienient excuse. If Kahn wasn't there to blame, it would have been some other damn thing.

To quote Alibi Ike:

"I coulda hit a homer, but I had a rock in my shoe."

That has been an ongoing fight. Fidel Castro cut the power to the
Embassy so the electric sign could not function.

For One and All,

We all know about the popular makers of
HF {Shortwave} Antennas here in the USA
such as : Alpha Delta; Antenna Supermarket;
Par Electronics; Barker & Williamson; Hy Power;
Van Gorden; Cushcraft; Diamond; Hustler . . .

But here is another HF {Shortwave} Antenna
maker from The-Land-Down-Under {Australia}
http://www.bushcomm.com.au/
http://www.bushcommonline.biz/SearchResults.asp?Cat=110
Always worth a look for some ideas on
"How To" Construct {Build} an Antenna
in a new and different way . . .

sometimes up-side-down can be interesting - iane ~ RHF
.
.

I don't see the point of spending the extra money required to buy an
antenna for transmit when what we need is a receiving antenna.

Seoul is within artillery range of N. Korea.

<Reduces the effectiveness of an anti-ballistic missile system that
relies on intercepting individual warheads. While a MIRVed attacking
missile can have multiple (3-12 on various US missiles) warheads,
interceptors can only have one warhead per missile. Thus, in both a
military and economic sense, MIRVs render ABM systems less effective,
as the costs of maintaining a workable defense against MIRVs would
greatly increase, requiring multiple defensive missiles for each
offensive one.

China's Islamist front

On June 27 the government of Uzbekistan transferred Huseyincan Celil, now a Canadian citizen, to Chinese custody to await execution. While authorities of the People's Republic of China charge that Mr. Cecil is guilty of killing Chinese delegates in Kyrgyzstan in 2000, the evidence suggests that Cecil was in fact in Turkey at the time under the direction of the United Nations High Commission for Refugees. The Toronto Star noted that the man "was sentenced to death in absentia for founding a political party to work on behalf of the Uighur people in Xinjiang province." Beijing's insistence on the execution of a man who is likely to be purely a human rights activist is not difficult to explain, but rather illustrative of the anxiety the Chinese Communist Party maintains over the country's Muslim west.

1760. What next, Taxes for Listening to Shortwave?

Newsgroup: rec.radio.shortwave
Date: 2006-07-11 23:07:45 UTC
From: Haruspex <HFH@4u2.net>
Message-ID: <12b8c2k17voff1e@corp.supernews.com>
Source record: 82997

Today's Wall Street Journal features in the front page of its "Marketplace" Section a typically fatuous article about the "Two Bills" - Microsoft founder and chairman Bill Gates and former President Bill Clinton - who have joined forces for the purpose of "bettering global health." The article describes at some length the informal partnership that has been developing between the two men and their respective foundations to bring private and public sector resources to bear in particular in fighting the international AIDS epidemic.

Curiously, nowhere in the article is there any reference to a particularly insidious focus of the Two Bill's joint fundraising efforts: the idea of establishing "innovative sources of financing" - read, global taxes - to pay for their ambitious plans for countering the world's diseases.

As it happens, this "hidden agenda" and the role of the Clinton and Gates Foundations (among others) in promoting it is the subject of a column in today's Washington Times by Center for Security Policy President Frank J. Gaffney, Jr. Mr. Gaffney warns that, unless President Bush acts to prevent it, the sub rosa global taxes agenda will likely be advanced at the upcoming G-8 meeting, where several members (notably, France, Britain and Germany) are committed to promoting such "solidarity levies" and, as of 1 July, the French have already instituted a prototype international tax on airline travel.

I hadn't heard about that yet. I'm very sorry to hear that news. Floyd is one of my favorite groups from way back. One the plus side, at least Gilmore is still going strong, and his latest album ON AN ISLAND isn't bad at all. Thanks for sharing that news; I just wish it was better news.
RIP Syd.

1766. ICFSW7600 receiver

Newsgroup: rec.radio.shortwave
Date: 2006-07-11 23:41:11 UTC
From: blair thompson <blairt@abcomm.ca>
Message-ID: <6uc8b2lfelgjvaju51k22qllhb1mda43iv@4ax.com>
Source record: 82901

The FM tuning on my Sony has lost its bearings, but everything else still works fine. It just bugs me that a function has gone south. A local techie looked at it for $30, but thought I should probably take it to a Sony repair facility for further delving into.

Is it worth it to throw more money at this rig? I bought it new 16 years ago, for $400 Canadian, and have been generally well-satisfied with the radio, listening mostly to SW, Morse code, etc. Guess it doesn't really owe me much of anything. But maybe I should be looking at a rig with newer electronics, etc., probably for less dinero, but the same overall features :)

Now this is the 7600, NOT the 7600GR...whatever that is...Is there a difference? The 7600GR is generally well-regarded on the Eham review site, by many radio amateurs.

Thanks for any input.

This is a nice use of HD 2. However, there are probably less than 200 HD radios in all LA so far, 90% owned by employees of radio stations.

Saying a signal is bad is not bad-mouthing. It is simply saying the signal does not cover anywhere near all the market. The 1260 transmitter is in San Fernando, it is on 1260, a bad frequency, and is not particularly high power. To cover LA on 1260 from that location, even 50 kw would not be enough.

Many talk formats are moving to FM. One in Tallahassee did it this week.
Others in DC, Salt Lake City and Phoenix have or are doing it. What we will
find is a gradual change to pure niche formats (Like KIRN in LA... all
Farsi) and then, probably, its demise as the less competitive signals go
silent.

This whole thing was started by what's called a troll. It was forged, not from the person it purports to be from. Many of the "responses" are also forged, and from the same person or his cohorts.

It exists to piss people off, get them riled up, and so the forgers can sit back and laugh at what they have gotten those in the newsgroups, who they consider to be idiots, to post as responses.

There is no excuse for the junk that IBOC puts out on the sidebands. It is a poor excuse of a system. On my current job, we are designing the next generation of VHF/UHF land mobile equipment. One of the measurements I make are ACCP (adjacent channel couple power). It has to be well below a level that could interfere with adjacent channel users.
Apparently, either the IBOC folks never heard of a vector signal analyzer, don't know how to use it, or they just didn't care when they launched their inferior system.

That is very true.....I e-mailed WBBM and never got a response. Last year, I actually phoned Ibiquity and was referred to an e-mail link. Somebody did respond, extolling the qualities of IBOC. When I asked that person how this system was going to be able to deal with evening propagation, I never got a response.

Neither WBBM, WTMJ, not WGN seemed to care. First hand experience, since I
am one of the people who contacted them, letting them know that they had
lost a listener. They don't care. They are too busy putting on appearances,
being "with it".

Unless you are in our own metro, the one in which the station is licensed,
none of us have any real benefit to be received from out of market
listeners. No revenue, no programming implications. Making any effort to
appeal to out of market listeners is an expense with no payback.

Hi:
Which external antenna are you using? I recently found that the wire
antenna that came with my Kaito 1102 didn't do much for me, but the
reel antenna that came with my SW7600GR is quite effective.

I agree with all negative comments regarding RadioMart, but I think most people in the hobby already know about him and have him filtered out of their eBay searches. He caters to the newbies.

However, I disagree that eBay is a bad place to buy gear. It is definitely the largest collection of radio and related equipment available, and with careful buying it is possible to avoid being taken. I have had a few attempts to rip me off, but Paypal is your best friend when it comes to getting your money back. EBay knows it can't afford to alienate buyers with a bad reputation and so it protects sellers pretty well. And the nice thing about eBay is that if a particular seller seems shady or uncooperative, just walk away. Another one just like it will always come up.

While I'm about a mile from WMAL's towers, I believe that I'm within
about 5 miles of WWRC 1260's towers, and they both are listed by the
FCC as running 5kW. So at least it wouldn't be a very far move :-).

WWRC's signal is pretty damn lousy for a 5kW transmitter just a couple
of miles away. I mean, it doesn't help that WMAL's harmonic is stamping
all over it in my neighborhood, but even when I get away from my
neighborhood reception is pretty bad even within a 10 mile radius.

Tim.

Try using an external antenna with a co-ax lead in.

The average house / apt has all sorts of electronic noise that a coax
lead-in reduces,
increasind SW reception / Clarity..

dxAce, et al.

I've gotten a few pdf files on the radio that I will send to your email address - or anybody else that may want. I would appreciate comments on the radio's specs.

Looks like an interesting radio and as I said, my friend rebuilds them, so I have a service option if I need. I will send 3 .pdf files after work from home. If you have another email address you would rather me send to then let me know by email. I know some people don't like posting their real email to usenet groups.

regards,
Bob

Laugh. Still fuming over that conversation?

>
> You see, Richards was right....we, as listeners have alternatives.
>

Unfortunately, one thing we will lose is the ability to listen to information sources that cannot be shut down on demand. All broadband, satellite, cell phone go through a massive infrastructure with built-in choke points. HF/AM do not. What we will lose is more important than the political implications; it has emergency implications as well.

Source record: 82999

I've been listening to radio talk show host Chuck Harder since 1991.
No more.
I've had it with him. I'm tuning him out forever.
I refuse to subject my intelligence to Chuck's infantile verbal assaults, goofy conspiracy theories, lame-brain Bush bashing, and so on, and so forth.
Hey, I never liked the guy in the first place ... so, in essence, this is no big deal. Yes, yes, yes, I know: Chuck suffered a lot in the last 10 years, most notably his bad accident in 1999 that confined him to a wheelchair for years. And I do realize the charitable efforts on the part of his network (TalkStar) and some radio stations (KCAA AM 1050, Loma Linda, CA for example) to keep him on the air.
But charity only goes so far.
Chuck should have stayed in Tampa; failing that, he should have stayed the hell out of politics. He is incapable of expressing a rational political thought - the mental version of his physical handicap, as it were - a handicap caused by his pathological hatred of the U.S. government, a hatred that defies all logical explanation.
Only Timothy McVeigh hated Uncle Sam more than Chuck Harder does, in my opinion. And we all know what McVeigh did.
Chuck Harder is not a "populist"; he is most definitely not a conservative. I would venture to say that he is not even a patriot. He is a government-hater, a "counter-culture-nik" born 40 years too late, a contemporary of Dr. Ward Churchill. He stands for nothing, but is against everything. And he, in my view, is dragging down everyone and everything associated with him: his radio network, his family, his friends, his listeners, his ideological comrades.
The most tragic thing of all is the fact that it's too late for him to reform. If this were 1992 or 1995, there might be a chance. Not now.
In a way, I feel sorry for the SOB. But my sympathy is tempered by my disdain for his politics. Nobody forced him to take that road to nowhere; he did it himself.
I cannot predict when Chuck Harder will go off the air permanently, but whenever that happens, it will be none too soon.

There is no absolute way to avoid being taken short of trying to buy
elsewhere.

> I have had a few
> attempts to rip me off, but Paypal is your best friend when it comes to
> getting your money back.

Ebay owns Paypal. They watch each other's backs.

> EBay knows it can't afford to alienate buyers with
> a bad reputation and so it protects sellers pretty well. And the nice thing
> about eBay is that if a particular seller seems shady or uncooperative, just

After a sale, when the purchased item arrives and the buyer can see it was
misrepresented, Ebay always supports the seller; that's where their money
comes from.

Although eBay is convenient, the company employs dummys, and is impossible
to deal with when there is a problem.

1827. Understanding the AM/MW Radio Broadcasting Business Model . . .

Newsgroup: rec.radio.shortwave
Date: 2006-07-12 17:19:15 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1152724755.048232.205020@75g2000cwc.googlegroups.com>
Source record: 83015
Body handling: HTML body converted to readable text

For One and All,

For the most part AM/MW Radio Broadcasting Business Model
is now 'by-design' a Local Media that serves Local Business Market.
Broadcasters serve Local Business Markets which are Limited
Geographic Areas related to Marketing 'potential' of Businesses
within the Area. Anything beyond the Area is Out-of-Market
and by definition a waste of Advertising Money and Broadcast
Resources.

NOTE - Any AM/MW HD-IBOC Signal Interference Problems
that are 'out' of the Local Market is by definition "Not-a-Problem".

FWIW - The Days of the Nation Wide Clear Channel Broadcaster
are long gone; and the Days of the Regional {Extended Market}
Broadcaster are Numbered; with the implementation of AM/MW
HD-IBOC Broadcasting.

The AM/MW HD-IBOC Broadcasting System makes sense in a
Local Marketing Media System : In that it further Localizes the
Local {Limited} Market Area and minimizes the Out of Area
Competition {Distance Market Potential}.

and that's the way i see it ~ RHF

Few modern receivers will receive any better if simply given a
"stronger signal" as in a longer antenna.

In fact many will begin to exhibit intermod and other signs of overload
if you just give them a longer antenna.

To get a real gain in performance, make your external antenna be
directional (even if just a loop or a dipole) or add a tuner with
selectivity to cut down on some out-of-band intermod nuisance.

It is a bad way to go to trash the existing broadcast system in order
to introduce another new system. They should have used another band or
segregated the existing band. I don't think much of the IBOC in any
event. If you are going to trash all the existing radios out there in
the world I would want a better payoff in new technology than what IBOC
represents.

Existing radios are 100% compatible, on both FM and AM.

The way AM and FM are listened to today, there is no loss by adding HD as an
alternative to analog.

Ham antennas are 2 to 3 times the cost of well made receiving antennas
and not worth the money for a receiving application. You are not going
to gain anything by spending $100 to $200 more for a ham antenna. A well
made commercial receiving antenna will last just as long. The main
difference between them is the elements for ham antennas are designed to
handle transmit power efficiently.

Sorry David, IBOC is compatible, but not 100%, as the analog sidebands
are limited and adjacent channels have interference by the digital
sidebands. Some people including myself do not agree that the existing
level of compatibility is acceptable. If it was 100% nobody would be
complaining about it. You have well explained the radio
station/marketing perspective on this but that does not change the
listening experience, which has limitations placed on it by IBOC over
the existing long time analog transmission scheme.

Telamon,

My point about "Well Built -is- Well Built" is that Quality Materials
and Good Building Techniques will result in an Antenna that lasts.
Start by taking a Look at some of the commercial products and
Amateur designs and learn 'How To' make "The Right Stuff" that
will endure the elements for years.

Although I have been know to Rig a new Antenna Idea once-a-week
when the weather, time and imagination are right. ~ RHF

As mentioned and even as presented to the FCC, the listening to stations on channels adjacent to local stations in each market is essentially nil, so there is no loss if nobody is using it.

As has been shown, even at FCC level, there is no significant usage of
stations adjacent to locals in each market. So there is no loss if there is
what ammounts to unmeasurable listening.

> Some people including myself do not agree that the existing
> level of compatibility is acceptable. If it was 100% nobody would be
> complaining about it.

I don't hear listeners complaining. I hear mostly DXers whining.

The greater good is trying to preserve the existing free terrestrial
broadcast system, which will not endure unless a digital alternative is
offered.

> You have well explained the radio
> station/marketing perspective on this but that does not change the
> listening experience, which has limitations placed on it by IBOC over
> the existing long time analog transmission scheme.

However, the only listening being disrupted is the potential to listen to
adjacents... something that, in practice, is just not done.

$12.7 billion, including assumption of liabilities. And that news is OLD.

Any receiver without a whip antenna will certainly utilize an outdoor
antenna well :-)

I like my NRD-525 -- they can be found cheaply nowadays. I'm sure
there are others.

You are wrong, and need to admit you are wrong. Sales decisions are not
always right. People DO listen to so called out of market radio stations.
They do it all the time. For instance people in the so-called Salem market
listen to Portland radio regularly (not that Portland really has anything to
offer, given they are all just cookie cutter stations mostly owned by two
companies, Clear Channel and Entercom). These cities are 47 miles apart.

Portland radio garners listeners further down the valley as well, and north as far as Longview, west as far as Seaside, Astoria, Tillamook (Astorians also listen to the occasional Seattle/Tacoma area stations), and of course as far east as at least Cascade Locks and for those in fixed locations (i.e. not mobile) they put in a good signal to The Dalles. And oh, while we're at it, if listeners outside their markets were not important, then why put up translators (these translators will also be affected by IBOC on FM), including the occasional translator on FM for an AM station.

Your argument is full of holes, which you frantically keep trying to fill.

Not really. This does not show up in radio ratings, which record every
incident of listening, no matter where the station is from.

> For instance people in the so-called Salem market listen to Portland radio
> regularly

OK, what Salem AM is adjacent or next adjacent to 1190, 620 or 750? These
stations are protected because they offer enough signal to the market to
_be_ protected.

>(not that Portland really has anything to offer, given they are all just
>cookie cutter stations mostly owned by two companies, Clear Channel and
>Entercom).

Lets see. I find ABC, Chris Bennett, Bohnsack, Bustos, Capital, Catholic,
CBS, Churchill, Clear, Don Cross, Crawforde, CSN, Dolphin, EMF, entercom,
Alan Gottlieb, Jupiter, KBOO Foundation, KBPS Public, KCCS LLC, Linfield
College, Mt. Hood CC district, Oregon Public, Pamplin, Reed, Rose City,
Salem and Wilamette. That is more than two.

Translaters are put up by tird parties.

There is a minimal loss. There is a huge potential for gain by keeping free
terrestrial radio alive.

We don't need illegals. Make people on welfare pick the vegetables, work
the fields, clean toilets, pick up trash, and sweep the floors. Make'em
work for that welfare check.

I don't listen to any radio program or TV show where the host or its
callers and guests are idiot retard lunatics. And I don't listen or watch
NBC, CNN, ABC, CBS, NPR, or MSNBC either. I don't like being fed agenda
when I want news.

EBay/Paypal do not always support the seller. Although I've had relatively few problems, by asking good questions of the seller and being willing to walk away when things don't seem kosher, in the 4 or 5 times that I've had to file a dispute because something was misrepresented, Paypal has sided with me (the buyer) and I've always gotten my money back. It sometimes takes a little longer than I would like, but if you're a reasonable buyer and can provide the facts about why an item was misrepresented, you won't have a problem getting things resolved.

Also, eBay/Paypal don't "side" more with either buyers or sellers. They side with the party that is right, in their judgement, after looking at the facts. They know that they can't afford to alienate buyers with a reputation as a place where you are easily ripped off. Confidence in the buying experience is what made eBay what it is today, and they are not stupid enough to give that up.

So if you have had bad experiences, perhaps it is because you have filed complaints that were not reasonable, or maybe you didn't ask all the right questions before you made a purchase. Possible?

ARS Amateur Radio Service

SC has a truly insane propasl he has been trying to seel in RRAP that would in the first throw roungly 300,000 ham off the air the first year and rough another 150,00 within 10 years

Thus his idea for requireing welfare cleints to do dirty job is avast improvement over whathe wants to do i the ARS licensing area Robert

No offense, but only an idiot wouldn't have known that they would "spin
up" people on these news groups, or any others for that matter. Your
idea is possible, but I'd have to say not probable.

If what you say _is_ true, maybe he'll 'fess up. That would be interesting.

US university cracks secret EU satellite code

A university in the US has cracked the secret codes of the European satellite system Galileo's first satellite in orbit, making it doubtful that the ?3.4 billion project will pay for itself through commercial fees as promised by Brussels.

"That means free access for consumers who use navigation devices," said the scientist who broke the code, Mark Psiaki, in a statement.
...
In mid-January, Mr Psiaki, professor of mechanical and aerospace engineering at Cornell University and co-leader of Cornell's GPS Laboratory, asked for the prototype codes but without luck.

Three months later he and his group of scientists had cracked the codes "just with an antenna and lots of signal processing," and with a basic algorithm to extract the codes.

Galileo is intended to pay for itself by offering several services, from a basic signal for use by the public to highly encrypted signals for governments and armed forces. [China is also funding Galileo]

- - I perfer the Alpha-Delta to the Daiwa and MFJ
- - Two Position Antenna Switches --for- connecting

- Overkill. Use a CATV A/B switch.

For One and All,

Somewhere between the Ham Radio Antenna Switches
and the CATV type Antenna Switches are the CB (5W)
quality Switches like the Workman CX-3 Three Position
Coaxial Antenna Switch.
IMAGE => http://www.cbradioworld.com/inc/sdetail/256
http://tinyurl.com/nagpf
The Workman CX-3 has One SO-239 Jack on one-side
for a single Input-Output -and- Three SO-239 Jacks on
the other-side for a three Input-Outputs to 'select-from'.
The Workman CX-3 uses a Four Position Rotary-Wafer
type Switch enclosed in a Metal Box.
Note - The 4th position is "OFF".

The one advantage over the TV type Antenna Switches
-if- you are using Coax Cables with PL-259 Connectors
on the ends is there is no need for "F" Adapters.

However -if- One is using RG6 TV type Coax Cable with
"F" Connectors then the CATV type A/B Antenna Switch
may be a good option.

Now there's a plan I can get behind. Having free money and free food handed out gives people absolutely no incentive to do anything with their lives. Make 'em earn that welfare check. Korea has a similar 'workfare' type program wherein homeless and/or destitute people clear litter from the highways and city streets. It gives them money, a place to stay, and some sense of purpose, and makes the country a lot cleaner as well.

Mind you, there are the odd cases where welfare is needed, for the infirm, mentally handicapped, etc.. but not for able bodied young people who are fully capable of working for a living (including women who want to sit (lay) back and be baby factories in order to get free cash, housing and food stamps. These can go earn their welfare money, etc., or they can get their livelihood the old fashoined way... marry some poor slob, then have a couple kids, divorce him and take him for everything he's got.

Newsgroup: rec.radio.shortwave
Date: 2006-07-13 00:15:29 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <44B59096.188F@mindspring.com>
Source record: 82858

The 7600GR is a good receiver for the money. I've seen it in
closeouts for $99US but $129 or $149 is more common.

The synch detection is the great feature, on AM. You'll wonder
how you got along without it.

It is however a somewhat noisy synch detection, compared to higher
priced ones. It works great on strong signals (which suffer as much
from selective fading as weak signals and so need it too, if they're
not local), and is tolerable if selecting the sideband with it allows
you to get away from splatter on an adjacent channel even on weak
signals. Alas it loses synch on weak signals sometimes and is noisy
about it when it does so.

Just to mention what even more money would buy, but this deal is a good
one. But this gets you in for low money.

Another good point made Brenda Ann - We actually pay those welfare
queens more money every time they get knocked up and have another kid.
What idiots we are! Maybe they should be paid less money for each kid
they have, or *please stand by while Yzordderrex dons asbestos suit*
Pay them even more money to have their gosh darn tubes tied. Dang, did
I really say that???

Sorry for propagating ths way off topic thread, but some things I feel
very strongly about.

I'm going through a dispute now where a guy who was finally kicked off ebay
(phil9923)
It took me over a month to get a refund from him for a radio he never
delivered. Now, another month later, Paypal sends me an email stating that
he may have used a stolen credit cars to pay me my refund and they want ME
to give it back. EXCUSE ME! That is and always was MY money. In the
meantime, my Paypal account is frozen. Thanks, Mr. Love, like that's your
real name...

None of your assumptions are correct.

The device was a "New" Video Grabber, complete with the power supply. It was one of 25 identical units being auctioned.

The unit arrived with a Radio Shack universal 300 mA wallwart (obviously NOT part of the "new" unit). The Video unit requires 3 Amps, as imprinted on the equipment.

The eBay resolution was that the seller would return what I bid for the unit, but I must pay to ship it back to the seller. That is NOT a reasonable resolution. The seller should, at least, have paid the return freight.

I also told them that, alternatively, the seller could simply ship me a correct power supply, which he did not want to do.

A correct resolution is that I should not be out anything for this misrepresented deal. The seller should have paid me for my original shipping cost and for reshipping it back. Anything less, permits sellers to pull shady deals and get away with it, at eBay's profit.

By the way.... Top Posting is the mark of, at least, a non-observant newsgroup newby.

Dear Mr. Thompson,

Personally I would not spend any more money on this receiver. Sixteen years is a long time for ANY portable radio so my recommendation to you would be just to use it "as is" for as long as you can and, when it finally "bites the dust" altogether, just discard it (or try to sell it to a collector of that model).

Now that you know that the radio may be on its "last legs," but is still functioning on SW and MW, you have plenty of time to research radios and decide what you want.

The Sony ICF-SW7600GR is indeed a splendid portable receiver as others replying to you have said. Should you be interested in this receiver, from time to time you might want to check Amazon.com for a sale price. Last December I bought two more of these receivers (I now own five of them) for $129.15 each and that included shipping. If you see it offered for such a price, grab it. (Don't wait either - those sales come and go very quickly.)

I don't know if you are interested in buying a more advanced receiver, but, if so, there are quite a number available at prices which were unheard of sixteen years ago. You may want to research some of them as well.

In any event, you are lucky - your radio is giving you "warning" rather than going dead completely and leaving you with nothing!

Best,

Joe

Just a reminder of the yearly CW broadcast
from former coastal station KPH near
Point Reyes, CA as well as several other
locations. At my QTH in Victoria, BC,
KPH and KSM as well as WLO and NMC are
being heard well using MixW decoding
software with near 100% copy. Here's an
example of what is being transmitted.
All ends later tonight: KPH first on 8642.0:

I just now got a ''PayPal' phishing scam email (need to update my
accound) and three days ago I got an ''eBay'' phishing scam
email.Oviously,since I am not registered at the real PayPal and
eBay,both of those emails were/are phishing scams.I never fall for those
scams and spams.If people wouldn't fall for those scams,we would all be
better off.

Thats an excuse for the business community to keep paying people shitty wages because they don't want to pay family sustaining American wages. Instead of paying someone say 30,000 plus benefits when want help for 7 and 8 dollars an hour. Who in the hell can live on that?

As more and more of that IBOC crap comes around,what is going to happen to the radios that are sitting on the store shelves? Will all of my old radios become useless or mostly useless?,sort of like Analog TV versus HDTV? (unless you subscribe to a satellite or cable tv provider) In my opinion,fcc and radio broadcasters couldn't care less than less about radio listerners.Or am I missing something here? I will never buy any product that any advetiser is pedaling if it is advertised on any IBOC radio station.I hope some of those fcc MORONS are/will reading this.I say Boycott the H..L out of them.

Yes, that's one of the downsides - you will generally be responsible for getting the item back to the seller at your own expense. However, I've always gotten my full payment refunded, including the original shipping costs TO me. Paying shipping for the return trip is simply the cost of doing business and part of the risk you assume. Just like in the physical world, if you buy something from the store that doesn't work and you want a refund, it's up to you to get in your car and drive to the store at your own expense. They don't come and pick it up, or pay for your gas as part of the refund.

I understand that some people have had bad experiences on eBay. My point is that I have bought a lot of radios through eBay (including one just last night) and have had few problems. EBay is the ONLY marketplace where such a large number and variety of radio-related equipment is available, but you have to follow a few simple rules.

1) Ask a lot of questions and be willing to walk away if the seller is unresponsive, vague, or seems shady in any way. There is never an item that you MUST have; another one just like it will come along.
2) Save all email correspondence between you and the seller regarding the item and it's condition.
3) Pay attention to the seller's feedback.
4) Use only Paypal, with a credit card, to pay for your purchases.
5) Be reasonable in your expectations.
6) If a problem does occur, present your dispute in a professional and reasonable way.

That brings to mind a question: Is there any way to stop paypal from
insisting on using your linked bank account as its first choice?

The reason I ask, is I accidentally forgot to check "more payment options",
and didn't notice until after paypal finalized the transaction. Paypal
attempted to overdraw my account, and I got charged a $25 overdraft fee by
my bank. The idiots at paypal were going to retry this 2 more times before
quitting, and using my "backup" credit card. If I hadn't noticed, this transaction
would have cost me $75 in overdraft fees. There was no way I could cancel
the payment, and switch to a credit card.

I complained to paypal, because I thought they were supposed to check the
balance on the account before they tried to draw funds, but they ignored
me completely.

Don't give them an account number in the first place.

A few years ago I listened to a radio show called 'The Troubleshooter'
done by a guy named Tom Martino, and he's still going today. One thing
he always harped on, hard, was 'Never give anyone access to your bank
account beyond the checks you write.' Not health clubs, insurance
companies, utilities, car payments, rent, paypals, not anyone. My first
wife allowed the insurance company to automatically deduct our /monthly/
premium from our checking account and two days after she'd set that up
they took six months' worth and we were bouncing checks. We had to
close that account and I don't do business with that insurance company
any more. I'm also no longer married to her but that wasn't
precipitated by the bank fiasco.

Hardly a month goes by without hearing about something similar. It
might be difficult to not give Paypal your account info, especially if
you sell on eBay, but I'll never do it. I've considered setting up a
special account just for Paypal and keeping the balance very low but the
monthly low balance service charges and that I'll get dinged just like
Chuck for overdrafts just doesn't make it worth it.

Until banks are more responsive to consumers and allow limits on such transactions (and I'm not holding my breath ;-) I don't engage in such transactions.

Tom Martino is still at it,

How are they as regards toxics accumulation? They're pretty high
in the food chain and eat things like big fish which eat smaller
fish, etc which concentrates everything that's been dumped all
over the Mississippi watershed.

Pay? there is no fee.

Buy the radio, no further fee. Get the radio, get far improved quality.

I will bet you have not listened to HD AM either ever or recently,
especially with codec ver. 2.2.5.

I agree that trimming is sometimes a good idea.

But as you have done, one can trim too much such that the "real" thread is
lost. All you left was the afterthought.

Also, too often, particularly on s.e.d., I see people trimming to enhance
their position. It's a judgment call whether and what, to trim.

We don't care. It is interference to signals that are not being used, vs. an
opportunity to keep free terrestrial radio viable.

I need to try some Alligator someday.By the way,that website is
www.gsaauctions.gov
I clicked on the website and I scrolled down to Trailers and Tractors
and then I clicked on the Mississippi link.I did see some fema trailers
for sale at govt auction.

I wouldn't mind buying one and set it up in my back yard and rent it
out.I am going to check out when the next fed govt auction in the
Jackson area takes place.

Which ones? There are dozens.

The STS is a major waste of money. Should be called limp American
dicks in space program.

No one will be attracted to it under any circumstances if its chief
selling point is that it's "almost as good as the alternatives"

We care about the only listeners we truly have... local, in the local market
area.

FM HD is better than any other current distribution system, plus it is free.

AM HD is as good as any alternative system, and is free. It is much better
than Analog AM.

One has to admit that Edweenie has a pretty good gig going here: Actually getting paid to post on UseNet.

Yes, one must remember it's not about the serious listening that HD/IBOC assumes, but rather the serious money that Edweenie and his minions hope to make by selling an unsuspecting public something it doesn't really need.

As always, follow the $$$

You don't have to. All existing radios are backwards compatible.

The only difference is in the improved audio quality. There is no such thing
as "serious" radio listening... it is almost all done to accompany other
things, like working, driving, etc.

Those of us in radio do not make any money from HD. In fact, it costs us in new equipment and the iBiquity license we have to pay for from now on.

What we get is the additional channel(s) on FM for additional formats, improved AM and FM quality and an opportunity to prolong the life of free, terrestrial radio.

No one has yet given me an argument why I should
replace the radios in my house with new radios to
cover the exact same bands that I have now. While
the receiver I have covers AM/FM bands, I rarely
listen on it. Why? Not because of poor fidelity, but
rather because I listen to radio I'm actively doing
something: working, gardening, mowing the lawn,
eating, washing dishes, driving, etc. When I turn on the
receiver, it's because I'm going to watch a movie
or something on the television that I want to hear
in surround sound.

Casual listening is the greatest benefit of radio, not
the serious listening that HD AM/FM assumes.

No money? Univision owns part of iBiquity, does it not? So therefore Univision will be a beneficiary of those licensing fees and by extension, you, Edweenie, will also be a beneficiary!

Shill on, boy... shill on!

OK, how about the Alpha Delta antennas that are around $125 -$130
instead of the $300 to $400 ham antennas. The Alpha Delta's are just as
sturdy and will last just as long.

"as good as" isn't what you've said previously, but it's also not good
enough to cut the mustard.

This is the death of AM Radio?

HALLELUJAH!! THERE IS THE PROMISE OF LIFE AFTER DEATH!!!
```

No nighttime IBOC and fewer interfering signals?

Might I somenight be able to DX the Farsi station from LA? It seems so unlikely, but...

IN AM RADIO, ALL THINGS ARE POSSIBLE!!!!

Thank you for your prophetic vision of the death of AM radio. Thank you.

SAY AMEN, EVERYBODY!!!

For the moment, things are all fine and dandy
as far as local reception is concerned. Eventually,
however, the analog signal will be replaced by
digital and analog will get turned off because of
some bean counter's decision that it's cheaper
to go one way or the other rather than both.

Besides, that still doesn't give me a reason to
upgrade my existing radios.

Yes, there is serious radio listening. If what you're
listening to is the focus of your attention, then it's
serious listening. I've listened to sporting events
on the radio when I couldn't get the game on
television. Until recently (when they started
winning again), the only way to find out about
Bengals games at home was to listen on the radio.

I know quite a few people locally who
turn down the sound on the sporting events on
television and turn up the AM broadcast instead
because the announcers are better. The Reds'
broadcast duo certainly qualify.

Major news events aside, the old radio shows
can still suck you in and make you listen for
1/2 hour at a time. For my money, the improved
audio quality is wasted in casual listening, particularly
if it's done via a portable device. Think of how many
people use iPods and MP3 players; the audio quality
there isn't HD quality, and that's plenty good for most
people.

The people who listen to AM don't put a lot of priority on audio quality.

People who do put a big priority on audio quality listen to FM.

You'll never lure any portion of the FM audience back to AM.

Not exactly. The main engines which launch the Shuttle into orbit can't be used after the big fuel tank is jettisoned. The smaller orbital maneuvering engines (OME's) located near the main engine nozzles are the ones used for deorbiting. They have a limited supply of fuel for that burn and other maneuvers while in orbit.

Free terrestrial radio is not dying. It is in, in marketing terms,
maturation and decline. Very old technology (90 years for AM, 60 years for
FM, 45 years for FM stereo) and is slowly losing users. While the impact is
not drastic for FM, yet, it is for AM, with essentially very few listeners
under age 45 and an average listener age that goes up every year.
>
> Almost seem to be a protection racket of sorts.

No, it is a product enhancement to make it useful into the future.
>
> As always, follow the $$$

HD costs money to radio stations, and any payback is more like insurance,
not a profit center.

Again the marketing viewpoint. This isn't a radio marketing news group
it is a hobby news group where people listen for other reasons than
tuning in for the programming material. That is not to say that the
programming is not the reason as I have tuned in out of market stations
to get programs not offered in my area.

People reading this news group care and do listen to out of market
stations and that listening is degraded by IBOC. Logically, since this
listening exists and is degraded by IBOC then IBOC becomes incompatible.
The best that you can argue is that IBOC is mostly compatible but that
is not 100% by any means.

> > Some people including myself do not agree that the existing

You don't care about DXers in your job but you should posting to this
news group.

> The greater good is trying to preserve the existing free terrestrial
> broadcast system, which will not endure unless a digital alternative is

Well I hate to break it to you but listening to adjacent stations is
"done" by the people reading this news group. How many times does
someone have to post a complaint here that IBOC degrades their
reception? Please don't come back with the marketing perspective because
I get it already.

Because he's going to make money from RADIO.

I mean, that's what HD is all about....keeping Radio profitable. If HD benefits Radio, and he draws his paycheck from Radio, he makes money, whether he gets paid by Ibiquity, or not.

I've worked with consultants in the 80's who had no financial ties to CRL, who would permit nothing else in their Radio stations. They benefitted through the increased profitability of the Radio stations after the CRL hardware was installed. (Although, I've yet to see a knob marked "Arbitron Share" on any transmitter processing device.)

And if the stations changed consultants, out came the CRL, and in went the next processors du jour.

CRL faded when alternatives, with better, less crushing audio, came about...and the loudness wars began to settle into uneasy truce. But there are some consultants who still swear by CRL.

My last station, we finally ended that insanity, and went with Omnia FM, that I acquired through a cashless deal with one of my equipment suppliers outside of the stations supply chain. Omnia is so tuneable, and so easily firmware upgraded, that it rendered most everything undesirable for all the hassle.

That didn't keep our consultant from Bitching every day he was in town about it. But, shit, we were top 3, and #1 in two dayparts, what's he going to do?

Consultants are paid a retainer, and, depending on the contract, a bonus pursuant to ratings performance. Many PD's and GM's are paid the same way: According to performance, especially ratings improvements. But also sales improvements like improved share conversion, increased margins.... And most all of them have their pet gimmicks. Some it's Selector. Some it's the latest computer networking solution. Some it's audio processing, some the DAM system, some even get snippy about the type, brand and model of the CD players in the dubbing suite. All with no financial connections.

Right now the hot ticket is HD. AM or FM. (Which has all but wiped out ALL AM listening at my home base...but fuck me...I'm just an old fart who sleeps with his dog...why would any radio station be interested in me? Besides the disposable income, the freedom to spend it as I please, and my wide ranging tastes, why bother to serve me? Or anyone in my neighborhood? Or anyone within 10 miles of me?....but I'm no longer served by Radio. So piss on me. But I digress....) And GM's, PD's consultants, sales manglers are all signing on to HD....because they believe it translates to future profits.

The most recent...what's the group, Bridge?....shows Radio revenues off again this past quarter, alternatives coming on strong. Broadcast companies are putting large resources behind alternative methods of delivery, and non traditional revenue stream development, because it's getting tougher to earn a buck with all the choices emerging.

Radio, in the face of this changing landscape, will do what Radio has always done: Evolve to meet new market realties. It will surive by changing. And what it may evolve into, it's very likely we wouldn't recognize from where we are today. But it will survive, and HD is one, ONLY one, of the paths influencing that evolution. Even as it trashes the AM band for listeners in unusual circumstances like me and the people in my community.

But there are multiple entities at each station signed on to HD. Because it represents the possibility of future growth, and future profitibility. Few, if any of them, draw a dime from Ibiquity.

More to topic, it's the same with DRM. There are stations worldwide that have shown interest in supporting DRM, as the future of shortwave, even as hit trashes the bands. Few of DRM's proponents draw compensation from DRM.

That David works for/with/over/under/around/and though Univision (and so did I for a brief time when they bought a TV station I was working) and that Univision is a signatory to the Ibiquity agenda, and an investor in Ibiquity as a company isn't really that big an issue. Many companies own stock in Ibiquity. Few, if any of their employees benefit financially from the position, given that almost none of the employees of the larger media companies get bonuses when the company's holdings return a dividend.

He's a corporate broadcaster. He's not saying anything here that I've not heard from anyone I've ever worked with or for.

And I've disagreed with most of them. Personally, I'm thinking HD, especially on AM is a gamble at best. A sentiment reflected in comments from WGN's Cheap Engineer, who pulled the AM stereo, what now, 2 years ago? 3? But hesitated installing HD because he wasn't sure it was 1) the way to go, technically speaking, or 2) fiscally a responsible investment.

But like I said earlier this week: That I can no longer hear even some of the big stations due to IBOC hash where I am in the far north suburbs?...they don't care.

They don't have to.

From AllAccess.com:

FCC Drops HD Radio Item From Open Meeting Agenda
That FCC open meeting agenda item on the effect of HD Radio on terrestrial radio got the ax shortly before the meeting's start on THURSDAY. The item, which was geared towards reopening the issue of IBOC digital interference and nighttime HD use, was pulled from the agenda THURSDAY morning and awaits rescheduling.

Not practical, paypal cuts you off after you have made an accumulated
$2000 in payments. The only way they will let you exceed that limit is
if you tie a bank account to your paypal account.

Further, ebay encourages sellers not to sell to unconfirmed addresses.
The only way to confirm an address is to link a credit card, or confirmed
paypal account to your ebay account.

I agree with him. That is why I opened this account just for paypal. I
only keep $50 in the account, hence the problem.

Not health clubs, insurance

That is exactly what I did. Credit unions charge no service fees, and have a $50 minimum for startup.

He trimmed exactly the right amount. He was only commenting on your comment about top posting.

Personally, I have found it better to allow others to do things the way they want to. They are going to anyway. So, I tend to avoid making comments about others grammar, spelling, and top/bottom/or sideways posting habits.

If the post offends me, I tend to ignore it.

So what does this development mean? That they are not going to address
the issue?

The investments by the broadcasters are minor, and were kind of seed capital
to get the larger investment bankers and private capital sources to finance
the development of HD. The likelihood of any gain from this pales compared
to the cost of converting stations, developing second FM channels,
marketing, etc.

Because it is one of those investments, like a new transmitter, that
preserves the ongoing business model.
```

AM HD compares favorably to most online streams, to iPod audio, and the that
available currently from satellite. It is vastly better than analog AM.
```

Yes, they are all older, most are over 45, and a majority over 55. That is
not a salable demographic, so the band will die as the existing listeners
age and no new ones come in due to audio quality.
>
> People who do put a big priority on audio quality listen to FM.

It is nowhere as simple as that. AM is a spoken word band because music
sounds inferior on it. In other words, AM dropped any programming that
nobody would listen to anyway.
>
> You'll never lure any portion of the FM audience back to AM.

Yes, you can.

It has about 7 to 10 years of life as it is, since the remaining salable
demos in 35-54 will be over 55 in that time period, and there will be no
advertisers. Just paid religion, infomecials and stuff like that.

When I began DXing, I not only joined NRC, NNRC, IRC, MWC, NZDXL, etc., but
I also subscribed to Broadcasting and Sponsor and such and learned about the
reason why I was hearing what I heard. Now, you say hobbyists have no
interest in the actual stations they listen too. You just gave me another
reason not to answer verification (QSL) requests.
>>
>> I don't hear listeners complaining. I hear mostly DXers whining.
>

As a DXer going back to 1958, I think it is important for DXers to know
about the radio business. If you want to live in a fantasy land, and get
angry about HD, then that is OK. But don't condemn radio as an industry for
doing what most of us think is right for the future.
>

Heck, you're either 60, or almost 60 so that makes you a member of that
un-salable demographic.

Just why the fuck is a member of that un-salable demographic doing the
programming for all those stations then.

Shouldn't they look at canning your un-salable fake Hispanic ass?

No, we are not. Radio revenues are declining, not increasing. we are looking
for ways to sustain the business model. I don't think HD will be a profit
center for at least a half-decade, if not more, and that will nonly be from
the new HD 2 channels.

Yes, and if it becomes primarily digital, it has 5 years left, max. And
that's probably optimistic.

But that is not going to happen unless most radios are HD capable. This
probably means that it will never happen.

I have never heard it discussed.

Banks often cash altered checks. Further, you are giving out your bank
account number, which in turn can lead to other forms of hacking.

I use a credit card that is just for internet use with a bank account
not connected to my main back.

Also, pay for small items with cash, especially in restaurants. The
less exposure of your credit card, the better.

It comes down to weighing practicality versus prudence. I've closed old
and opened new paypal accounts when I get too close to the limit, even
on the same credit card, and that limit was $10k the last time I opened
a new one.

> Further, ebay encourages sellers not to sell to unconfirmed addresses.
> The only way to confirm an address is to link a credit card, or confirmed
> paypal account to your ebay account.

I've never had a seller bring up the 'verified' issue even when they say
they'll only ship to a verified address, maybe because I contact the
'must be verified' sellers personally in addition to the automatic
post-auction contact. Like paypal, they're mostly interested in the
money and will bend their rules a bit if it looks legit.

> ...I opened this account just for paypal. I
> only keep $50 in the account, hence the problem.

I'm sorry it hasn't worked out better for you and I hope it gets better,
but my experience makes me cynical and it's not that much more trouble
doing what I do now. The again, I don't sell often and I don't take
paypal payments when I do. That may have to change, and I'll have to do
the special account business, and watch it like a hawk on bunnies.

> That is exactly what I did. Credit unions charge no service fees, and
> have a $50 minimum for startup.

No local credit union available for me.

73 and the best of luck to you,

< Snip >

Where did I indicate that I or others don't care about the stations we
listen too? I'm saying other people have reasons other than my own.

Some people like to DX stations, which often are the adjacent channels
to the locals. I don't DX to get QSL cards but other people do as a
hobby. I listen to out of market stations for the programming because I
am a program listener. I also tune through the AMBCB day and night to
see what distant stations I can hear. IBOC is limiting what I can hear.
I actually spend most of my listening time to out of my market stations
from the LA and San Diego areas by day and points further north and east
of me like KGO and KOH at night.

I spend the majority listening of my AMBCB listening to KOGO, KFI, KABC,
KNX and the local KVTA by day and add KGO and KOH at night. I spend a
little time with KTMS during the day, I can't get them very well at
night.

I would listen to KRLA but they put in a lousy signal even during the
day.

How does the sound from the R8B compare to the R390? What do you use
for speakers on each radio? What antennas do you use?

I own a Drake R8B and an Ten-Tech RX340 that I use most of the time.

For AMBCB I use a 50 foot circumference shielded loop antenna in a
rectangular shape and Sony bookshelf speakers.

And yet, you're the one who wrote, in post 173, that AM will never become primarily digital and, in fact, you say you "have never heard it discussed."

I think you need to get your story straight. Is digital the future or not? And don't tell me that you think the "digital alternative" is the half assed deployment of HD we've seen over the last couple of years. If that's the case, then it's totally nap time for this thread.

> facto lack of interest in the stations.

I know about HD and I don't think it has big enough payoff for the
listener for the cost of equipment.

I do not like the way HD is being implemented on AMBCB causing
interference to distant stations.

I don't like the fact that IBOC adversely affects my listening of analog
signals.

I listen to stations that are transmitting IBOC but I don't have a
receiver to get the digital signal. I might get a HD radio when the V2
radios come out if the IBOC standard continues to look stable. For
starters the makers of HD radios should make them upgradable and I
would like IBOC to be an open standard.

Where do my posts indicate a non-interest about AMBCB stations that use
IBOC?

>From RWOnline:

IBOC Pulled From FCC Agenda for Now

For a while there it looked like we'd get some decisions at last on various important aspects of digital radio in the United States. But the FCC pulled the final authorization for IBOC off its agenda Thursday morning. A spokesman told RW Online, "It isn't done."

Stations will have to wait longer for easier notification procedures when they fire up their digital transmitters or decide to multicast.

There was no indication of when commissioners might finalize the item, which was expected to include a provision for multicasting, so stations would no longer need an STA to split their digital signals, as well as a strategy to handle AM nighttime authorization.

Hey, David Eduardo - lick my balls ! IBOC is dying ! Go find yourself a new job !

Mister Billy Smith did say:

> Getting rid of the fat welfare ho's would be a better proposal. I don't
> blame the kids but I do blame their parents for being such useless
> pieces of crap.

When you say getting rid of the fat welfare ho's - do you mean like exterminate them? Not a bad idea, but I think there may be laws against that sort of operation. Heck, I'm all for leaving that extermination stuff to God. He's actually pretty good at culling large groups of people from the earth all at once.

Unfortunatly with the role models these kids grow up with the cycle continues. They grow up to be useless pieces of crap themselves. Perhaps if the gov't would step up and offer these useless Ho's some crack or guns for their reproductive organs we would once and for all see an end to this nonsense. DC Mayor is screaming that he has a crime emergency and this is typical across our nation. Unfortunately, the only way out of this terrible situation will be drastic measures.

Yes, bomb them sand niggers back to Allah. Hope they don't have a political party in Israel like the our democrats. They would have to pull out before the job gets done. Of course most Israelis understand it's a life & death struggle. The Democrats haven't figured that out yet.

No, Markie. You would be grandfathered until your current license expired
then you have to pass the code test and written again to renew. You fail
you go back to CB until you're smart enough to pass. My proposal is good
because non-hams would see how much better the service is and want to be
hams.

You get paid what the job is worth. The market should be what sets the
wage, not the Government. If you need $30,000, get a job that's worth
30,000 or start your own business. In this contry no one is forced to
work for the wage they're getting. They can quit and get a different job.

How? When I tried that, they told me the card belonged to a previous
account, and would not let me open a new one. [That was the first thing I
tried when I got close to $2k.]

I think that most listening in the future will be to the digital signal, not
the analog. I have never heard anyone talk about turning analog off.

David, FUCK OFF! I don't generally use foul language, but you bring it out in me. And that ain't good. You keep saying nobody is listening. Well, you are then calling everyone in this NG, and tens-to-hundreds of thousands of people across the US, and hundreds-of-thousands to MILLIONS in Canada, Mexico and the Caribbean "nobody". We take great offense to that. I consider your IBOC shilling SPAM, and if you continue with it on this NG, I will personally mount a campaign to have you releaved of your internet access. WE DON'T WANT TO HEAR IT! Not the shilling, and not the QRM. GO AWAY!

HD _IS_ authorized. FM can go HD with just a letter. AM can go HD daytime with just a letter. FM can add a second or even third HD channel with a letter that gets and automatic STA. The only thing not authorized is night operation on AM, which is not a very big deal anyway.

> A spokesman told RW Online, "It isn't done."
>
> Stations will have to wait longer for easier notification procedures

Easier? All it takes is sending a letter now. How much easier can you make it? No notification at all...like FM stereo???
>
> There was no indication of when commissioners might finalize the item,
> which was expected to include a provision for multicasting, so stations
> would no longer need an STA to split their digital signals, as well as

Per Inside Radio, the subject was felt to be more extensive than can be delt with in a general meeting, so they are going to call one just for HD.
>
> Hey, David Eduardo - lick my balls ! IBOC is dying ! Go find yourself
> a new job !

HuH? My job, today, does not depend on HD. It may in a number of years, though... as will every job in radio.

You need to take a drink or a pill or a toke or something. You don't understand the state of HD, nor the way the FCC weeks.

HD FM is authorized. HD secondary channels are authorized with just a
letter. AM HD is authorized daytime. Nights don't matter that much, but
would help.

The measurement of out of market listening in the US and Mexico shows that there is next to zero listening to out of market signals. Compared to the gain to be had with HD, the infentissimal loss of out of market listening is a very reasonable trade. we are talking about a minor sacrifice, and in exchange getting a possible extension of the product life of both AM and FM radio.

In the Aribtron data, which includes every county in the US and Puerto Rico, there are only a couple of hundred stations out of 13,500 that get listening outside their own market (MSA). Most of these cases are adjacent markets, like Riverside and LA or Palm Beach and the Miami MSA, and are for mostly FM. A few AM cases are known, mostly like WGN and WLS that have local, and protected, signals in several adjacent metros due to the unusual ground conductivith of parts of the Midwest. These are very few in number.

In the Caribbean, there are ISLANDS. There is no listening from one Island to another on AM or FM. The listening patterns are like the US, but the local bands tend to be fuller so stations in other towns on the same islands can't be heard (Puerto Rico ha 132 stations) And geography makes out of market FM listening impssible. AM is almost gone in the Lesser Antilles,

with more than half the AMs of 25 years ago gone, and the local listening is to FM.

In Mexico, there is a very high station density, so much so that AMs have reduced power because they do not get any gain from rural coverage... as there are local stations in all areas.

I've spoken with two GM's, now, who've said they can't wait to shut
the analog off, and save the cost of power. Especially with energy costs
about to skyrocket here, that can be quite a difference in the bottom line.

I know they talk amongst each other, and I know it's been discussed
for some future date. Nothing official, of course. And nothing from the
Commission. But it's being discussed. And like analog TV, when the
digital audience reaches a certain saturation, it would be fiscally
silly to continue to support a mode that's not being listened to.

That is an interesting reason... spend $100 k at least to go HD, and then
shut off analog to save a couple of thousand.

I just do not think that there would be a win for at least a decade by being
only digital.

This sounds more like the FCC, which is responsible for the sunset law on
analog TV. Hopefully, this was a lesson learned that you can not force
consumers to buy things they do not yet want.

Economic reasons. Eureka gives equal coverage to every station, and eliminates the competitive advantage that many operators paid for by buying the best facilities at a much higher price. The economics of radio would have been severely disrupted, and many US investors in the owners would be harmed.

The FCC saw fit to protect the status quo, finding a digital system that was compatible with existing allocations.

> shut off analog to save a couple of thousand.

$100k is a Cap item. The couple of thousand is recurring. When we
bought into the new combiner on the top of the Hancock and upgraded our
antenna, we dropped more than $1.3M and no one batted an eye. But we
were still reusing the toner in the copy machine, and bitching about the
airconditioning bill in the summer. No one blinks at the Cap item when
it can result in recurring savings.

Especially when use of the analog stream falls below the use of the
HD stream, and with as many distribution outlets many stations are
investigating, a GM will get a real itch to shut down the analog stream,
and save that outflow for something more profitable.

>
> I just do not think that there would be a win for at least a decade by being
> only digital.

I think that may be a bit optimistic. Given the rate at which radio use in general is declining, (and this has been a fairly recently documented phenomenon...even as late as last year, the numbers suggested that things were only off slightly...Bridge has been reporting sizeable erosion for the last two quarters, now) and given the difficulty, at least from where I sit, in listening to AM signals, and the lack of options for retrieving some content once the IBOC hash blots out the available signals, I don't expect things to remain viable for analog AM for anything near a decade.

Let me give you an example...where I am, far north suburbs of Chicago, about a 3 wood from Waukegan...I've got two AM's, one Milwaukee, one in Chicago, that carry Rush Limbaugh. If I want to consume that content, those are my choices. There is no local station offering that content. As the IBOC rash spreads, those stations, WISN and WLS will become closed to me. They're nearly impossible to catch some days, anyway, due to noise. The Din of iBiquity would close them entirely, as it has a number of other stations formerly available here. And you know I'm no slouch when I want a signal. But even I can't pull content out of the noise where IBOC is concerned.

Now, I'm part of Chicago metro. So is Pete Gianakopoulos. But we're going to be under served when the IBOC rash spreads to the rest of the dial. And there is no alternative, no local frequency, offering what's available from the Chicago and Milwaukee AM's. Rush isn't on FM around here. And he's not on XM or Sirius.

Air America, where I am, is no longer listenable.

So, there's content put off limits by the laws of physics, where the FCC's model says we should be enjoying AM reception from the market to which we belong.

In that light, keeping the analog stream alive for a decade is more or less, just silly.

Now, I realize that my mileage may vary...but I can't be the only one experiencing this. Nor can this be the only area it's happening.

Eventually, the conversation about terminating analog AM will extend beyond the coffee bars between GM's and into much higher places where things get decided in earnest.

>> I know they talk amongst each other, and I know it's been discussed for

Radio has a 7 rating at night (7% of all people use it) and a 24 from & AM to 7 PM. It has been this way for about 45 to 50 years. No change in technology is going to increase the listening at night. Advertisers even dismiss the 7 PUR rating, and just don't buy at all at night, generally requesting bonus spots at night.

Hey everyone, I just wanted to know what your opinions are on these two radios? I recently found an old shortwave radio of my dads and have become interested in these types of radios. I would like to get a new one for home but also for when I travel. These are the two I have narrowed my search down to but am having a difficult time making a decision between them. Could anyone give me some advice, reviews and recommendations?
Thanks all,
L

But the cap item depreciation hits each year and quarter. Granted, it does not impact EBITDA, but if you are a non-public corporation, that would not matter... it is money out of pocket.

I guess some companies look at it that way. I wish I had a huge capex budget like that!
>

I am an HD supporter, but I can nrealistically see this tipping point int he next 5 to 7 years. Can you? I don't even know if AM will survive.

> I think that may be a bit optimistic. Given the rate at which radio use
> in general is declining, (and this has been a fairly recently documented

The decline in cume is very small. 2% since '65. The listening time is off 2 hours off a base of 21 for the average listener, and that is since 1988. So we have nearly 10% or a rate of nearly a percent a year. However, the erosion is mostly in non-servable demos, teens and 55+ with some 18-24, but far less. There are so many reasons for all this that it is not easily analyzed.

>.Bridge has been reporting sizeable erosion for the last two quarters, now)

Bridge really lacks credibility to me. They use a marketing model of Awareness - Trial _ Usage and not a broad sample nor much ethnic sample

(they apparently have no Hisanic interviewers, as far as I know) and the data is suspect. Arbittron has a lot of data on the website, with immense samples over a million a year.

This is more an AM probem in current noise level environments. we find we can not get diaries in LA with under 15 mv/m, and 20 is better.

Agfian, Am may not make it. News talk is migrating to FM now, including DC, tallahassee, Phoenix, Salt Lake, etc. This may be inevitable. AM analog sucks.
>
> Eventually, the conversation about terminating analog AM will extend

Maybe if nobody is making money, we will go all digital. I see this as a beyond 5 year issue.

Here is the following from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to flee Ecuador to avoid being killed. In fact, I was a matter of days away from becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you, Frackelton?

More insight into the workings of David Frackelton Gleason, posing as 'Eduardo'... shill for Univision, and apparently a very disloyal American as well?

Greetings, listeners!

In memorium of Syd Barrett, the founding member of Pink Floyd who died last week at age 60, this broadcast will... have a lot of Pink Floyd. Although Barrett left the band in 1968 just before their success began, he set their course and his influence continued on.

Tunage will include portions of the albums The Wall, Dark Side of the Moon, Animals, The Final Cut, etc.
Likely to be a marathon.

Tune in on 6,876 kHz starting around 0115 UTC (9:15pm E.D.T.)

Telamon,

To quote myself again : "Start by taking a Look at some
of the 'commercial products' and Amateur designs"

Yes you are correct Alpha Delta does make some
very good 'commercial products' such as the :
* Alpha Delta DX-ULTRA Shortwave Listening (SWL) Antenna
* Alpha Delta DX-SWL Sloper Antenna
Also the Antenna Supermarket 'commercial' Shortwave
Listener's (SWL'ers) Antennas are very good :
* EavesDropper SWL Trapped Dipole Antennas
* Eavesdropper SWL Sloper Antenna
The RF Systems T2FD Tilted Dipole Antenna for the
Shortwave Listener (SWL) is also a fine example
of a 'commercial' Antenna design along with the :
RF Systems Mini-Windom Antenna and the
RF Systems EMF Electro-Magnetic Field 'passive'
Wire Antenna
Plus there is the Par Electronics End-Fed Shortwave Listener's
{EF-SWL} Antenna is moderate sized but features a robust
design that lends itself to many applications.

Look + Observe = Learn - Buying is not required - iane ~ RHF

I've made the same mistake once or twice myself, Chuck. It doesn't matter a whole lot to me, since I pay off the credit card in full anyway, but I do like to have that last bit of protection in case something goes really wrong (which hasn't happened yet, but still....) and I also like to have the one-month float.

I don't think there is a way to make the credit card the default payment option; it's one of those annoyances in an otherwise good service. It's curious why they didn't try the backup credit card right away. That's good to know.

Screw the advertisers, what about the listeners?

Why not just turn off the transmitter at 7 PM?

Really...

What does ''...''on circulation'' among the...Commissioners...'' mean
to you?

(Inside Radio)

News Update - Thursday, July 13, 2006

Digital delayed? Yes, but probably not for long.
The FCC - ensnared in the thicket of the Adelphia cable transfer -
abruptly pulled the "digital radio" item off the agenda for this

morning's monthly meeting. The Commission also pushed the meeting time back two hours, to 11:30am.

But signs are that the rulemaking on digital will go forward quickly - possibly "on circulation" among the five FCC Commissioners.

The issues are critical - involving rules for HD2 multicasting and nighttime AM digital.

Why not the albums that Syd Barret actually plays on?

The Pink Floyd

Band:

Syd Barrett - Lead Guitar & vocals
Roger Waters - Bass Guitar & vocals
Rick Wright - Organ/Piano & vocals
Nick Mason - Percussion

1967

March 11
ARNOLD LAYNE (Barrett)/CANDY AND A CURRENT BUN (Barrett)
(UK 45 - Columbia DB 8156, mono) Other Issues:
US 45 - Tower 333
? - Columbia ESRF 1857 M9 (anybody know what
this is? I
think it's a French promo or
something.)

June 16
SEE EMILY PLAY (Barrett)/SCARECROW (Barrett)
(UK 45 - Columbia DB 8214, mono) Other issues:
US 45 - Tower 356
Fr 45 - Columbia CF 113 de luxe (promo)
UK 45 - Columbia SCMQ 7066 (juke-box ed.)

August 5
THE PIPER AT THE GATES OF DAWN
(UK LP - Columbia SCX 6157, stereo - Columbia SC 6157, mono)
Tracks:
Astronomy Domine (Barrett)
Lucifer Sam (Barrett)
Matilda Mother (Barrett)
Flaming (Barrett)
Pow R. Toc H. (Barrett/Waters/Wright/Mason)
Take Up Thy Stethescope And Walk (Waters)
Interstellar Overdrive (Barrett/Waters/Wright/Mason)
The Gnome (Barrett)
Chapter 24 (Barrett)
Scarecrow (Barrett)
Bike (Barrett)
Producer - Norman Smith
Engineer - Peter Brown
Comments: The mono release has significantly different mixes. The
original
release has a black label w/ columbia logo in blue
Other issues:
67 US LP - Tower T/ST 5903 (Different Track
order: See
Emily Play, Pow R. Toc H., Take up Thy
Stethascope
and Walk, Lucifer Sam, Mathilda
Mother, The
Scarecrow, The Gnome, Chapter 24,
Interstellar
Overdrive)
71 ?LP - Harvest 3C-062- 04292 (stereo)
5/83 UK LP - Fame FA 3065
2/87 CD - Capitol CDP7 46384 2

November 18
APPLES AND ORANGES (Barrett)/ PAINT BOX (Richard Wright)
(UK 45 - Columbia DB 8310, mono)
Other Issues: Fr 45 - Columbia CF 135 (different mixes?)

?
FLAMING (Barrett)/ THE GNOME (Barrett)
(US 45 - Tower 378)
-very rare

1968

June 29
A SAUCERFUL OF SECRETS
(LP - Columbia SCX 6258, stereo - Columbia SC 6258 mono)
Tracks:
Let There Be More Light (Waters)
Remember a Day (Wright)

Set the Controls For the Heart of the Sun (Waters)
Corporal Clegg (Waters)
A Saucerful Of Secrets (Mason/Gilmour/Waters/Wright)
See-saw (Wright)
Jugband Blues (Barrett)
Producer: Norman Smith
Comments: Barrett is only present on "Jugband Blues" and "Remember a Day". He is replaced on the other tracks by David Gilmour.
Other issues:
68 - US LP Tower ST-5131
71? - Fr LP Harvest 3C 062-04190 (stereo)
87 - LP Fame FA 3163
87 - US CD Capitol CDP7 46383 2
93 - included in the "Shine On" Box Set

http://www.pink-floyd.org/barrett/discographies.html#pf

> Unfortunately, that's completely irrelevant.

Nope. It is relevant since the issue with radio usage has to do wtith usage
of other entertainment and audio sources.
>

> And now they have to rent tower space to XM to help pay the bills.

Not really. Most XM terrestrial repeaters are in dense urban settings, not
where any AMs would have a tower and generally not on station-owned FM
towers.

This statement is not true.

And even if some stations have an XM antenna on a tower, the rent is
minimal. For example, in LA the tower rental in town for a small antenna
would be below $10 thousand a month... while the top billing stations in LA
bill $50 to $60 million.

That, of course puzzles me too. I have had it make the right choice on other occasions when the amount was several times the amount in this account. This time, the account was about $7 short of the needed amount. It is an otherwise static account, so its balance shouldn't ever drop on its own... they screwed up, and I got to pay.

Reviews of both are here:
http://www.radiointel.com/reviews.htm

Be aware that the Eton E5 gobbles batteries even when turned off. I
own one and typically have to recharge the batteries after 2 months of
non-use. My E5 also came with a power adapter that generates
interference on shortwave bands. Other than those issues, I am happy
with my E5.

I have an ATS-505 as well, but I have much less usage experience with
it. It is larger than I expected and I find the sound that its speaker
makes to be unpleasant for some reason.

LS and Everyone,

Radio Shack Amplified {Active} Shortwave Antennas
appear if-by-magic on eBay :o)

* Radio Shack Portable Amplified Shortwave Antenna
eBay Item # 190,007,419,177 - Yes - That is 190 Billion !
The Seller claims that : "The box has never been opened"
"and is being sold AS IS"

* Amplified Shortwave Antenna by Realistic (RS)
eBay Item # 110,006,319,062
The Seller claims that : "This auction includes the
amplified antenna, owner's manual, the original box,
and a short cable."
Plus this Seller goes so far as to : "Quoting the box"

hey - if it's ebay - it's those wild and crazy sellers
that make it kind-a-fun ~ RHF

RE,

The Mexicans just may refer to themselves as : Norte Amercanos
-or- Americanos del Norte
http://pt.wikipedia.org/wiki/Estados_Unidos_da_Am%C3%A9rica

The Cubans might call themselves : Americanos de Cuba.

Seriously NO Canadian would call themselves an : American [.]
- - - Even the French Canadians would say : Je Suis Un Canadien !

And the Argentinians, Chileans would most likely call themselves :
Sur Americanos -or- Americanos del Sur -or- Americanos Latinos

The Brazilians being slightly different would say : Americanos Sul

Only an American (USA) would Boldly Say :
I Am An American ! - and I Am Proud of It !
and so say i ~ RHF

>

As much as I hate the fact that it would have to be done. Maybe some of these people ought to have their tubes tied or sterilized. Of course, we would have to pay for that but perhaps we could get some cut rate services performed. Another problem you have is once you get these social dependents off the system, what do you do with these people. I mean, a lot of them have limited skills, lack the work ethic to do anything, etc. Not to mention the social disorder you very well may see when you cut the sugar daddy back and not give them tons of handouts.

Since most of the inner cities in the US have been trashed for the most part and most people don't want to go there to live. That is another problem to forming business and industry in those areas. I spend a lot of time in city areas and I will visit those places on personal business but I sure wouldn't want to live there. You hit it right on the head about DC but you could count a hundred maybe 200 cities as being economic and social disasters.

The crime problem has been increasing for 40 years. I find it silly that their so called statistics say that crime is decreasing. The closest big cities nearest to me have not onl anywhere from 70 to 100 murders a year, but also thousands of property crimes. Even the smaller town I

live in has the same crap especially with property crimes.

The further the economy erodes and purchasing power of the US Dollar, the worse the problem because with inflation eating away the purchasing power people will need more to live when often that money is not there. Plus, you can conclude that there is an increasing underclass being formed in this country especially in larger cities but also even in rural areas. It's interesting because in this Midwestern town unemployment runs about 9 to 10 percent according to their statistics. All this crap comes back to the whole drugs, crime, and social disorder problem.

I certainly don't believe in the socialistic bullshit promoted by the far left wing of the Democratic party but I haven't seen a whole lot of leadership on the other side of the aisle either.

Source record: 83124

BAD,

The Days of the Clear Channels like KGO are Numbered.

Once HD-IBOC AM/MW Radio is the norm at night with
Thousands of Local AM/MW Radio Stations trying to
saturate their Local Media Markets with IBOC Hash so
that nothing beyond their Market gets through . . .

Then 50 KW Clear Channels will reduce their Night Time
Analog Power down to 20 to 25 KW as an effective Cost
Savings and Increase the Power Levels in the Digital
Side Bands as more and more newer HD AM Radios are
put in use by a new generation of AM/MW Radio Listeners.

Within Ten Years - At Best the Clears will become Regional
Broadcasters and only do a marginal job of that.

DX ? - What's That Daddy ?
- - - Why Son I Remember When . . . ~ RHF
.

That's a nice concept if it actually worked in the real world. Generally
a business or company is going to pay the employees either what it can
afford to pay those employees in exchange for their productive labor. If
the market totally decided wages, we would have the most productive
making the most money and the least productive who sit on their arses
drinking coffee all day making less. It doesn't work that way. It's
funny because I know many people who create things with their hands in
skill positions making less than someone who knows nothing about the
process.

Try Sky News, CNN, and BBC. All are heavily biased twoard the Palestinians,
but they have far more "assets on the ground" than anyone else.

For the first few hours after we went into Lebanon after Hizbolah Israel
TV was relaying Al-Jazera with a Hebrew voice over.

Geoff.

Well at least your estate will get to keep your life savings. If you get
sick late in the year, and the healthcare facility/hospital shut down
for the rest of the year because it ran out of government money (a
typical scenario in Canada), there will be no one to give you any care
and you'll just die. But hey, your life savings will still be intact!
Is socialized health care great or what?

Be sure to thank you local Israeli Flag waving
heebie hook-nose when you are soon paying $8 per
gallon (...or more?) for gas at the pump in a few
weeks time.

All of this just because some jews in Israel got
a fly-up-their-butt to go and attack on 2 fronts and
drive up gasoline prices to give a HUGE PAYOFF to
Big Oil Bush and Cheney for all that AIPAC money.

Hope that you morons like paying $300.00 to go and
fill up the tank of that Ford or Chevy SUV or pickup truck.

(Really should make the niggers think it's easier to strong-arm a gas
station
and get away with it instead of a bank eh? Gas station attendants today
have more cash in their pockets that is behind the counter than the
local bank! This should precipitate a nigger hold-up crime wave soon too
eh?)

Listen to Kingdom Identity Ministries on Shortwave
radio to learn the TRUTH White Man! You are being screwed.

I see. Where is the emoticon or indication that this was humorous?
>
> You fuckers

Thank you. Any sentence that starts with "you..." or "those people..." is
probably a) racist or b) based on a stereotype. In this case, I suspect
answer "b" applies.

> turned radio from an art and craft to just another
> over-researched insult to the intelligence of your customers.

I have been in radio fo just short of 50 years, and radio in the US was as
researched "back then" as it is now. It is just that the methods for finding
out what the listener wanted to hear were different.

The art of radio is how you deliver the things the listener wants. A greasy
hamburge from a roach coach uses the same main ingredeient as a steak
tartare served in an upscale restaurant. It is all about how you put it
together.

Research is a tool used by good and bad alike. In another trade, it is like a saw. A good carpenter vs. a bad one will do very different things with that simple tool.

> Now you
> pay the price as people say ''you suck'' and get other forms of
> entertainment.

There is far less "you suck" commentary than you apparently believe. Folks use XM or streams because they offer more alternatives and often one that is not on fee radio. People spend more time playing computer games, which makes less time for radio. Etc.

The issue is making the delivery system as good as it can be.

> You fucked the golden goose and now she can't lay no
> more eggs.

Gee, I do not see that. I see some very good and some very bad stations and a lot in between, just as I did in the 60's.

Here is the following from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as
Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to
flee Ecuador to avoid being killed. In fact, I was a matter of days away from
becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their
current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you
un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you, Frackelton?

More insight into the workings of David Frackelton Gleason, posing as 'Eduardo'... shill for Univision, and apparently a very disloyal American as well?

No guess at all, Radio Free Asia is on the freq at that time so most likely
jammed by anyone who doesnt like their message.

It has to do with how people use radio now. If
other things are displacing radio in areas that
radio has traditionally dominated, maybe it has
something to do with what is put on the radio,
rather than the reception of the radio or the
quality of sound of the radio. For pete's sake,
128 MB MP3s are no better than cassette quality
(or from what I can judge), but because people
can mix their own playlists that they believe are
better than what you find on the radio (with less
commercials or inane chatter or bathroom jokes),
people will continue to use those 128 MB MP3's.

There are people (I am one) who used to mix
tapes for friends just because I liked doing it
(also did a stint at a college radio station as
a DJ, so I'm also well aware of how little input
I had in the playlist). It was usually a PITA,
and it would take a couple of hours to get a
tape together. Fast forward 15 years, and
right before we went on vacation this summer,
I spent 1/2 hour putting 3-4 CDs together of

a mix of music off of my personal collection
that I've ripped. I know I could have chosen
to listen to the radio on the trip (it was a two
day trip to a certain location in Orlando, FL),
but the kids outvoted me and wanted to listen
to their stuff.

> over the Mississippi watershed.

When I lived in Louisiana, there were periodic alligator hunts to control the population. And some commercial distribution was permitted. The meat was inspected, dressed and presented just like beef in some stores, when there was that kind of quantity available, or it was released to restaurants. So, as far as cleanliness, it was accepted according to the relevant government standards, as far as those may be relied upon.

During my stay, there were no cases of alligator meat borne afflictions, so, it was actually pretty clean.

And it was actually pretty tasty.

One could also buy horse, crawfish (by the boxcar load), fresh water mussels and snails, and all manner of things that most of us don't find too often at Jewel. Then again this is Louisiana we're talking about...where, to quote Justin Wilson....'they'll eat any damned thing.'

Interesting note on the Louisiana cuisine....most dishes have each a far wider distribution of the food groups than do most North American fare. I get blinding headaches, when I've been going too long, too hard and too fast...due to lack of sleep, and less than optimum diet. I never had a headache the whole time I lived in Louisiana, and I've never slept better. My physician attributed this to regular enjoyment of the native cuisine.

Horse, alligator, crawfish, and all.

And if you've never been to a crawfish boil, son, you ain't lived, yet.

Aside from the obscene taxation and the horrifically corrupt politics (Governor Edwards holding a press conference to say that yes, he took a bribe, yes, he gave the money to his wife who bought a fur coat with it, and no he's not going to take any crap for it) Louisiana

wasn't a bad place to live. And the SW reception in my apartment by the lake was amazingly good.

-
- Canadans, Cubans, Mexicans, Brazilians, Argentinians, Chileans,
- etc., are also Americans. The name has been high-jacked.

RE,

The Mexicans just may refer to themselves as : Norte Amercanos
-or- Americanos del Norte
http://pt.wikipedia.org/wiki/Estados_Unidos_da_Am%C3%A9rica

The Cubans might call themselves : Americanos de Cuba.

Seriously NO Canadian would call themselves an : American [.]
- - - Even the French Canadians would say : Je Suis Un Canadien !

And the Argentinians, Chileans would most likely call themselves :
Sur Americanos -or- Americanos del Sur -or- Americanos Latinos

The Brazilians being slightly different would say : Americanos Sul

Only an American (USA) would Boldly Say :
I Am An American ! - and I Am Proud of It !
and so say i ~ RHF

No problem. 4warned is 4armed. k35454.

> that time.
>
Most of what you would have heard would have sounded like:

Bravo, victor, three, Juliet, quebec, standby; repeated twice followed by 'message follows': The message of phonetic characters would be spoken and repeated once. These types of messages are known as Emergency Action Messages (EAM's).

There would also be many cryptic messages as well as routine traffic (phone patches) by units to bases by calling 'Mainsail' and identifying their unit. Many of the phonetic messages were actual attack orders; some conversations were encrypted. You would also hear authentication messages as 'Sky King, Sky King, do not answer', followed by an authentication (phonetic) message with time stamp.

During the active part of the 'war' I spent many hours trying to correlate messages based on frequency, time of day (or night), etc., to actual events going on. I'm sure many of the readers did the same.

Oh, by the way, in 2003 GHFS was changed to HFGCS (high frequency global communications system). Some of the group might object to your usage of the old acronym.

> Another one just like it will always come up.

Exactly. I have several pieces of ham equipment that I bought on eBay
and I got what I paid for every time. The only real problems have been a
couple of people who mistook a customs invoice for a declaration of
replacement value for transport loss. In one case the difference was
large enough to need correction.

But I have, looking around here, a keyer, paddle, microphone, HF rig,
antenna tuner, audio DSP filter, artificial ground, Noise canceller,
speech processor, flashlight and reading light--all acquired via eBay.
And that's just my desktop. Around the room, a portable air conditioner,
another HF rig, digital TV receiver, HDTV VCR, DVD player, stereo, HDTV
set, and VHF-UHF handheld. In my bedroom there is an old S38B
Hallicrafters. All from eBay.

The trick, you see, is to evaluate the listing (and the lister's
feedback) to ensure that the item is what you want. Then don't bid
anything more than you're actually willing to pay for the item. Take
shipping into account. This means you will lose a lot of auctions. But
you should not care, since you will lose them to people willing to pay
more than YOU think the item is worth.

Now, a fair amount of that stuff was new when I bought it and came from
dealers who happen to operate eBay stores. But a lot of it was second-
hand as well.

I only ever had one problem that involved real money. And It was my
fault, not theirs (I got suckered into dealing outside eBay channels).

Just a week ago I had a minor problem where something stuttered and I
bought the same thing twice (from a dealer). eBay told us how to handle
that smoothly and promptly so that I didn't have to buy twice and the

seller wasn't charged for the sale.

The thing with eBay is to document every sale ON eBay. Do everything through eBay, except possibly private emails to a seller or buyer (but keep copies). If a dispute arises, it is usually because either the seller has misrepresented an item or the buyer doesn't want to pay for it. And eBay is well aware that, without buyers, they'd be a shell, not a business.

True. But like huge investments in automation by even small businesses, the cap investment results in recovered recurring costs. Even privately held companies are making that choice. Even if they have to incur debt to do it.

Not all, certainly, but enough. And many of the GMs I speak with, faced with declining revenues and the increasing need to bring product to more numerous and diverse outlets, are seeing the Analog AM stream as a cost with little return. If coverage can be effected digitally at a fraction of the power, and the analog stream is only a fraction of total distribution, their thinking is to turn it off, and recover that cost.

It may not be the best long term solution, but it is on the table informally. And will only be a matter of time before it's formally discussed.

> like that!

Sometimes it's a matter of making the presentation. Digital Audio Management wasn't even on the radar screen in the corner office of my station, until I made a presentation one day at an out of office breakfast, and showed the GM what the advantages were. He did his own research and within a year we were installing the AudioVault.

When it was till Windows 95 territory.

Yes, I can. And in less than 5 years. There are too many distribution alternatives in the market, with many more on the horizon. AM analog usage will drop precipitously, primarily due to the trashing of the bands by digital carriers. I'm a big fan of AM radio. I do very little of it anymore because of the rash. As I've explained, even my locals are falling prey to IBOC interference.

When you and I began these discussions, what 5 years ago, now, your contention was that Radio usage was and had been essentially constant for the last 30 years, with only slight losses in share. A definite shift in the balance between AM and FM, to be sure, but overall, Radio was stable, with a very bright future. IIRC, you said something like, Radio has never been more profitable. I recall my comment was to be guardedly optimistic....that just about the time you think things are good, someone comes along with something new, something unexpected, and steals the food off your table. Which comment has been met with varying skepticism, not only from yourself, but others here and on other USENet newsgroups.

And here we are talking about AM's survivability, and the stemming of FM erosion in the face of the rising number of alternative choices.

WGN revenues are off again, according to a figures released by Tribune:

"TRIBUNE CO. second quarter operating revenue fell 1% to $1.43 billion and net income plummeted 62% to $87.8 million (28 cents/share), with the Broadcasting/Entertainment division showing declining revenues, off 2% to $404 million, blamed on losses at two TV stations it is selling, WATL-TV/ATLANTA and WEWB-TV/ALBANY-SCHENECTADY-TROY. The company said that its radio/entertainment division, which includes the company's sole remaining radio property, Talk WGN-A/CHICAGO, also showed lower revenues due to declining revenues at WGN as well as reduced

syndication revenue at TRIBUNE ENTERTAINMENT and fewer CHICAGO CUBS home games."

This is yet AGAIN, another such report by Tribune, with particular interest in WGN-A shortfalls in revenue. Suggesting that the future is not so bright for WGN. And by extension as one of the nation's most successful AM radio stations, AM Radio in general.

Note that revenues are off. Last trends for WGN are up. How is it, then, that the industry's most respected army of trained assassins are unable to convert share at a stable rate?

It would have to do with the people who are calling the shots, the advertisers, and their ability to spend money more efficiently in both local media, and it's alternatives.

Loss in revenue does horrible things to well established radio stations. In fact, a heritage radio station can be blown off the dial by an upstart with no budget, simply by bleeding off a fraction of the heritage station's share. Especially in today's over leveraged radio ownership environment, a minor loss in share, means numbers don't get hit....And a well established radio station has a pretty heavy budget in order to hit the numbers expected by the home office.

Once the revenues start to fall, tightening up begins. And the already naturally paranoid staff starts thinking about possible cuts. It's tough to maintain morale under those circumstances. But that's not the real hazard.

Once revenues begin to fall, focus becomes intensified on the revenues. To the degree that everything else suffers through neglect. Radio in the US is ALWAYS about the money, but when things are good, at the very least, lip service is paid to content, public service and programming effort. Let revenues fall, and the sales ducks start selling everything that's not nailed down, and many times things that are. Clutter spikes. Units go up. And everything on the air has a sales/promotional angle to it.

One jock, who was my mentor many years ago, and an assistant of mine most recently, voluntarily got off the air because he was just flat worn out by all the selling.

And while the station is focussing on hitting it's budgets, the audience is focussing on the extra spot load, the extra sales oriented promotional clutter, and the general decrease in satisfaction.

Clear Channel's Less is More program, where :60s are discouraged and :30's encouraged, with over all fewer units, took a cruel twist when two quarters into the program, in house said that the audience was responding, while external perceptuals showed that the audience thought there were more spots on the air than ever. Now selling less inventory and at lower rates, stations hoping to capitalize on a boom in ratings that never really materialized, started redoubling their efforts to find

every last free dollar that can be squeezed out of an hour. And with that, they proposed selling 'AdLets,' 5 second drop-in commercials between a jingle, or image piece, and a song. Good for the bottom line, perhaps. But what about the audience?

My point is, that though share appears to be slightly off, revenues are starting to fall, and when revenues start to fall, the balance of focus and effort shifts to revenue from programming. Now, you yourself have said on a number of occasions that the sharp GM's and owners realize that the big win goes to the stations that present the best content. Or at least the most popular content. But good content costs. And when revenues are off, the first thing that's sacrificed is the content.

Yes, most stations were not profitable before consolidation. I got that. And I actually understand that. And I actually see and understand that since consolidation many of those unprofitable stations are now viable with a black bottom line. I've seen it for myself at several stations I have regular contact with. But with consolidation also came enormous debt load. And a substantial increase in debt service to be borne by the same, or nearly the same budgets that couldn't support the station before consolidation. Meaning cuts were required. Deep cuts in operating costs. Starting with the most easily eliminated recurring costs: human beings. Star talent gets shitcanned. Live stations became voicetracked. Or "Jack," and his clones. Some went syndicated. Some went dark. But ALL had to bear the weight of the increased debt service, and that meant more aggressive sales. Which means more aggressive cost control...especially recurring costs. More clutter, and compromised content.

Leaving the audience out in the cold while Radio looks after itself.

Are they not forgetting something?

The FIRST time there's an alternative that's viable, Radio is now faced with a real and present threat.

Well, along came Internet Radio, and Cell Phone radio, podcast radio, Satellite radio,....and how many more, yet unheard of are on the horizon that provide lower clutter, mass customizable (read that 'audience responsive') entertaining content. Internet Radio is just beginning to catch on as a viable product, but who knows where it can go? Stations beginning to stream via cell phones. Other alternative content also available by cell phones. Satellite radio. Pick your poison out of hundreds of channels. None of which has a significant share, yet. But taken as an aggregate, pose enough of a threat already to eat into Radio's mature and declining share. But it's not the audience share that's really at issue. It's the revenue share. Radio has the investement, the budget, the debt service, the infrastructure, and the well hardened business model....all established and all keyed into making the content that's available, available. Bleed off a small share of Radio's revenue, and it's all threatened. Radio as a whole can be in

huge trouble.

Why? Because the threat is driven by content. To a lesser extent, it's driven by audio quality, but in the Third Millenium, the Digital buzzword is all important, because of perceived improvements in quality. But that's only really a myth...people listen where they get the content they want.

And advertisers follow the trends into their buys. Radio revenues are declining. And the burden is on Radio to withstand the shrinking revenue share.

CBS Radio just cut loose how many of it's well established and historically significant staff? Because of declining revenue. Here in the Windy, the HD-2 staff at WJMK, the legends of Chicago radio were severed at once, this week. Because of revenue short falls.

How many halls at CBS stations ran red this week?

ClearChannel is talking about staff cuts. Spinning off properties. Because of declining revenues.

How many more generic voicetracked shifts will appear on CCU stations, as pros hit the beaches. Because of cap expenses, huge debt service. Because of declining revenues.

Yeah...consolidation has worked well for Radio. It went from a lot of small stations struggling to make ends meet, and a lot of big stations swimming in cash, to bone crushing debt service and eroding share....fighting for it's very survival.

You're right. Leonard Kahn, had he kept his mouth shut and let AM stereo establish itself, would have been the hero of AM radio and we'd be looking at a dramatically different broadcast landscape. AM might even have continued to be a viable music format.

Now, we're trying to do the same thing with IBOC/HD, and in the process, doing what would never have been considered before: trashing the bands with noise, in the interest of boosting listening.

You're way too close to the bull, David. Take a step back and see who the horns have really gored.

I'm a big proponent of AM. But I can't use AM because of the signal to noise in my suburban location. I'm the consumer of content. And the kind of consumer with great disposable income for big ticket items.

I'll take my listening elsewhere. And my money along with me.

IBOC/HD is an enormous risk. And one that, like AM Stereo, may find too little gain, after too much loss.

You don't trash the bands to inspire new listening.

Especially, if revenues are off.

>
>> .Bridge has been reporting sizeable erosion for the last two quarters, now)

> samples over a million a year.

I'm, likewise, not convinced that Bridge is the best tool. But
consider that investment is made based on a lot of facts and a great
deal of confidence. Especially new investors.

Whether or not Bridge is the best too is not the issue, but that
they publish and get repeated is. Even if the Arbitron facts refute
Bridge, repetition of the Bridge reports will, in not too much time, get
picked up by media sources and expand the exposure, which can, and will
erode confidence. I know of two advertising agencies who already use
Bridge when evaluating media strategies. That's where it starts.

It doesn't matter whether the methodology is correct, it just
matters that someone picks it up and acts on it. Even if the data are
wrong, they become self fulfilling as buyer confidence and as a result,
Radio revenues erode.

>> Let me give you an example...where I am, far north suburbs of Chicago,

>> concerned.
>
> This is more an AM probem in current noise level environments. we find we
> can not get diaries in LA with under 15 mv/m, and 20 is better.

Regardless of the techical nature of the problem, the result is that
the content of my choice is cut off from me. And it's cut off from me BY
IBOC hash. And I have no alternative but to exit Radio for equal or
similar content. And as this is a problem spread over a wide area,
you've got widespread erosion of AM radio usage in both the Chicago and
Milwaukee ADI's. This was not a problem two years ago. There was noise,
but it could be dealt with, by antenna, or by DSP. No longer.

That translates to lower useage of AM radio. And declining revenues.

>
> Agfian, Am may not make it. News talk is migrating to FM now, including DC,
> tallahassee, Phoenix, Salt Lake, etc. This may be inevitable. AM analog
> sucks.

You and I will forever disagree there. I've got some very nice AM
receivers with (on the right station) great ear pleasing audio. But that
too, has been trashed not only by IBOC, but by NRSC II.

But the lack of probable surviability of AM is not based on new technology.
It is based on an ageing listener base and the reality of radi time buys.
What will kill AM is not its technical issues per se, but the fact that AM
is no longer acceptable to most anyone under 40 and that cutoff point is
rising each year.

AM may survive if it enters the digital world. I wonder if this is like AM
steeo which could have helped AM a lot in 1978, but by the time it arrived,
years later, it was too late.
>
> WGN revenues are off again, according to a figures released by Tribune:

This is because in 25-54, WGN is 15th in the market. It is near-death as a viable money machine, and sustained mostly by sports play by play. It's not the technology, it is the fact that it has no salable listener base.

> This is yet AGAIN, another such report by Tribune, with particular
> interest in WGN-A shortfalls in revenue. Suggesting that the future is not
> so bright for WGN. And by extension as one of the nation's most successful
> AM radio stations, AM Radio in general.

Yet KFI in LA, which tries to get more 25-54 appeal, and is the #5 25-54 (#2 in English in this 42% Hispanic market). The problem is WGN which has aged with its listeners.
>
> Note that revenues are off. Last trends for WGN are up. How is it,
> then, that the industry's most respected army of trained assassins are
> unable to convert share at a stable rate?

The salable ratings are down, horribly. Since the kind of rates WGN charges are not accessable to most direct advertisers, and agency accounts seldom go 55+, here is the reason.
>
> It would have to do with the people who are calling the shots, the
> advertisers, and their ability to spend money more efficiently in both

They get the demos they are after in more quantity on 14 other stations. #1 25-54 is WOJO, by the way. And WOJO's sales have doubled in two years.
>

I have mentioned this in the past, but most broadcasters are minimally leveraged in the category of 30 station or more owners. The consolidation of the post 1996 radio world was mostly equity and merger financed.
>

For the first time, as revenues have been flat or off, there has been an inventory tightening, mostly lead by Clear Channel. Average spot loads are below 11 minutes now, a new low.
>
> Clear Channel's Less is More program, where :60s are discouraged and

I have not seen this. In fact, I have seen a very good "less commercials"
from the listeners to CCU's Spanish and Hispanic tageted stations.

>

I've not noticed this, either. What I see is a more critical analysis of
whether high priced talent is deliveing good revenue... with the Mancow
decision in Chicago an example of a costly show that did not deliver a good
margin. I think we will see more networked radio... the same model that
allows Rush to be in Tallahassee.
>

See the above. The Cleaar Channel debt to equity ratio is better than that
of General Electric!

>>
> And advertisers follow the trends into their buys. Radio revenues are
> declining. And the burden is on Radio to withstand the shrinking revenue
> share.

Right now, all traditional media are in a flat or declining revenue postion,
with newspapers and local TV staitions the worst off. Radio is up in some
markets, off in ohters. This may, in part, be a reaction to severzal big
growth years, where radio finally broke into getting over 8% of ad
expenditures... something it never did.
>
> CBS Radio just cut loose how many of it's well established and
> historically significant staff? Because of declining revenue.

Not really. They are bvieng punished on the street for lackluster
performance, and did a housecleaning. Revenues are pretty much flat, with
the real mistakes in NY and Chicago offset by huge growth in places like LA.

> Here in the Windy, the HD-2 staff at WJMK, the legends of Chicago radio
> were severed at once, this week. Because of revenue short falls.

>
> How many halls at CBS stations ran red this week?
>
> ClearChannel is talking about staff cuts. Spinning off properties.
> Because of declining revenues.

And Disney is cutting several thousand employees and cutting back form 22 to 8 features a year. This is more about the ongoing demands of investors than the actual businesses.

>

> the horns have really gored.

Fortunately, I am in a sector that is growing hugely, even this year. Listening is not down, we are spending more on programming than before, and sales are up. the model of investment in programming still works. Those who do not follow it are the ones with problems.

Amusing. Shows you how inaccurate stereotypes are.

Among my last few projects where I was directly involved in programming:

1. News talk in LA with 100% live and local programming, with most talent having no talk experience so we could get out of the mold of older talk programming. Average age: 41. Made Top 10 in 15-54 and tied KFI.

2. Top 15 market music station I converted to "all morning shows" with entertaining talent and very few songs all day long. #1 with twice the shares of the next closest station. This was a transition for a personality music format, and the station stayed #1 during and after the transition, completing 20 years of #1 last year.

3. Group of 13 mostly major market stations (5 of the top 10, for example) with 100% live talent, a 1200 song playlist, and no liner cards. #5 25-54 in LA, top 5 in Houston, Dallas, #1 25-54 in San Antonio, etc.

4. First and only rock station to play only local rock artists in the Hemisphere's second largest market, with new talent, trained to do a different style of radio. Daily live in-studio bands, etc. #1 cuming station in the Hemisphere for several years.

How is this limited to "gullible consumers"?
>
> There is no point in the survival of what you do as it serves no

Our business is to satisfy listener needs. In some cases, like KLVE in LA, it is to be an unintrusive and relaxing station. In others, it is to be exciting and foreground. No formulas, and all research does is give you tools to find out what listeners like and do not like.

Impeached Clinton's Brother Given VIP Treatment in North Korea

http://www.yonhapnews.co.kr/services/2208420000.html

Impeached Clintoon's Brother Prformed in N.Korea

During the Clinton administration, North Korean dictator Kim Jong-Il was called "a teddy bear" who "changed his image" via a "giant makeover." In a truly bizarre twist, Roger Clinton [illegible] the president's brother [illegible] traveled to North Korea to play with his band in a special concert.

While at a dinner hosted by Syrian President Bashar al-Assad Communist China President Hu Jintao said, Israel is a "colonialist plot aimed at detaching from the Arab nation a part that is dear to it - Palestine".

A comment all too familiar in Left-wing/Liberal/"Progressive"/Socialist/Communist propaganda.

Iran was very friendly with Hitler. Probably many Nazi pedophiles went to Tehran seeing how Islam is also pedophile friendly. The Nazi's knocked up a bunch of Islamo-fascist's little daughters. The result of which we see today with suicidal little Hitlers.

He also states that AM IBOC does not affect local listening to the analog signal. This is not true in many cases, either. Have you picked up a basic radio lately? Clock radio, boom box, whatever? Notice how you can get the stations (especially the strong ones) over maybe a 50-60KHz range on the dial? A lot (most?) AM radios anymore don't even HAVE IF's in them... they use these broadband chips that amplify and detect whatever is tuned at the antenna. On those radios, you ARE gonna hear the digital sidebands along with the analog signal.

With half a dozen AM HD installations on the air, we have not had one
complaint about noisy reception.

Most people would probably blame localized interference, and again, the
average listener doesn't know beans about engineering and won't call the
station to complain.

And what if you DID get a complaint? My money says you would ignore it,
because despite your claims to the contrary, no individual listner is worth
a pile of dogshit to you or any other beancounter.

I'll put a grand on the fact that on any of the radios (and there are
millions of them out there) you WILL hear the IBOC hash along with the
analog signal. There's no way to get around it. If it's within the bandpass
(of these basically RF amplified crystal sets), it's going to come out the
speaker.

You may be in sales.. I'm in engineering, and have been for quite a long time. You can't just say something is one way and have it that way when it violates the laws of physics.

Currently hearing WWV on 20, 15, 10 and 5 mhz. Can't quite make out
2.5. No doubt I will later tonight, but of course I'll lose 20. I check
occasionally on the off chance I can hear WWV on all five frequencies.

Steve

Believe me, our listeners complain over everything. In Miami, WAQI listeners
call every time the Cuban synchronized jammers change operation. And in LA,
sports listeners quickly complain when we do not turn HD off for live soccer
games.
>
> And what if you DID get a complaint? My money says you would ignore it,

Or local listeners are treated like dignitaries. They are the basis for our success, our jobs and our futures. We have multiple procedures to make sure every listener call gets followed up on. When I was actually PD of just one of the stations, I insisted on talking to every person with a complaint.

So far, we have no evidence of it. And the combined cume of the HD stations is around 2 million persons.

I was in engineering for a long time, and passed the PE exam in Ecuador.

> You can't just say something is one way and have it that way when it
> violates the laws of physics.

There are no laws of physics involved when I tell you that we do not have any complaints on HD operation on a group of major market AMs (not on the FMs either and there are more of those... reaching 10 million a week). And there is no law of physics involved in saying that the reason why there are no adjacent channel interference complaints because nobody in our HD coverage areas was listening to adjacents and next adjacents. There is, in a sense, no interference if there is no perception that anything is being interfered with.

No school. I was self taught, and passed the exam and was addressed as Ingeniero by nearly everyone. The PE exam does not require a degree, just passing the exam. In 1969, I went to Washington and passed the First Class Radiotelephone FCC license on first try, and have the original ticket still. I have been the chief operator of WEZR in Washington, WUNO in san Juan, WQII, WSRA, WZNT in San Juan, and even, for a while, of KLVE and KTNQ in LA. I built all my own equipment in Ecuador, including an AM diplexer which is pictured with me in front of it on my website.

When I was building my first station in Ecuador, I found nobody was trained to install and maintain the solid state audio equipment I had imported. I took one home study course after another (NRI and Cleveland Institute, including the advanced Broadcast engineering course that included calculus and such) and installed the gear myself. NRC members John Hoogenheide and Larry Godwin both saw my installations, including the transmitters I built myself, in fact, and took pictures of them.

On a lark, I sat for the local PE exam, and passed it in the specialty of electronics.

So, yes, I have proof. I still even have some of my exam scores from NRI and Cleveland Institute. And I have every FCC First Ticket I ever held. Three were unique in that they were renewed in Pueto Rico. And plenty of people saw the equipment I built... the stations would not have been on the air, otherwise, as I was CE for 7 long years in a country where there were few spare parts and much had to be built by hand, including FM broadcast antennas.

That's nice, but per your website:

1970. The economic situation in Ecuador looked to be rapidly
deteriorating, with runaway inflation, currency controls
and
shortages of everything. For 6 months, I lived in
Washington,
D.C. while preparing for the F.C.C. First Class
Radiotelephone
operatorï¿½s license.

http://www.davidgleason.com/1964-1970-E.htm

Get your story straight, fake Hispanic boy, and you might just be more
believable (not).

Hello everyone,

With us being in Summer now the HF Radio Conditions aren't that great.
And with everything happening in the World right now we decided to
start a little webpage project. We are posting a list of Shortwave
Stations and News Services that also broadcast online -- We are still
working on it but you can check it out at:
http://www.palmsradio.com/news.html

All the very best,

Bennie Dingo
Rock-it Radio

I believe the self discharge rate on some NiMh batteries may be as high
as one percent a day. If so, the radio isn't at fault..

> interfered with.

I'm not even talking about adjacents anymore.. since you don't give a flying F*** whether people trying to listen to adjacents are no longer able to. I'm talking about ON CHANNEL interference to radios manufactured today that are basically broadband amplified crystal sets that you can get the same station on (presuming 640 KHz) 610, 620, 630, 640, 650, 660, 670... and that's damn near every digital or analog clock radio and boom box out there that sells for under $200. On such radios, there WILL BE on channel hash received and heard. There is no way you can get around it.

It may also depend if the alligator meat is from farmed alligators or
whether it is from alligators caught in the wild. I'd bet that any toxic
accumulation would be higher in meat from farmed alligators.

Not any more. The night proction used to be essentially the whole county,
and now KFI is ripped up by interference in Redlands... KNX by the time you
get to Yucaipa. Nearly none of the 1-A clears (of which there are only 25
in the whole county) really covers much of anything any more due to noise,
interference from other stations on the same channel, etc.

There is nothing inconsistent there.

I went to Washington, was working as GM of WEZR and WRFK (Richmond) and at
night I studied Part 73 of the rules (which I did not need to know in
Ecuador, you should know) since two of the thee parts of the First Phone
test was regulations. The technical part was easy, the other was just

memorization for a few months.

I passed on the first try, about 30 days after being in the Washington area. I stayed several months more, thinking I could sell the stations in Ecuador and invest in the company I worked for... never could sell as everyone else wanted to sell, too.

I have a bunch of that kind of radio around the house. I do not have trouble
with KTNQ or any of the other HD signals in LA on any of them. And, as I
said, there is no hash on channel that we have detected (and the AM in LA
has 40 employees and the cluste has 6 engineers) nor has any been reported
to us ever.

Same at the other stations. In fact, several of them were the exclusive
World Cup stations and we would have had a lot of angry listeners were they
to have had trouble listening to the cup... perhaps the highest tune in of
any programming over th elast 4 years on these stations. If we got through
the major games with not a single complaint, then there must not be a
problem.

- The whole point of clear channel stations is that they
- provide service to people outside of urban areas.

- I've not noticed this, either. What I see is a more critical
analysis of
- whether high priced talent is deliveing good revenue... with the
Mancow
- decision in Chicago an example of a costly show that did not deliver
a good
- margin. I think we will see more networked radio... the same model
that
- allows Rush to be in Tallahassee.

Are you sure it isn't Nazi Jersey especially since it has all the
trappings of a totalitarian hell hole. Gun bans, crooked politicians, an
ex governor who put his lover in a key Homeland Security position.
Meanwhile a high crime rate especially in Camden, and Metro NY area
Jersey. Isn't it also funny that Corzine is a liberal Democrat yet he's
also a very rich person at the same time. Hopefully more people will
move out of that place. The only problem is that they are coming to a
state near you and me with their welfare parasite tendencies and
socialist ripoff schemes. Beware.

Fat Teddy Kennedy will go into Vodka overdrive over this. If he'd take a few
Arabs for a ride, he'd show them how to swim for their lives, but only AFTER
he leaves them to fend for themselves.

I got nothing against CW, but being kept out of amateur radio for 40+ years
cus I had difficulty learning the code, sucks.
Finally, I got enough right to barely pass the 5 wpm test. Still can't find
anybody slow enough for me to copy on the air.
If I ever get good enough to use it, I'll try a few homebrew transmitter
projects.

I expect there are some technically competent people who might be interested
in amateur radio, but have no interest in learning code.

My Paul Schreck troll served its purpose.

For the last ten days I've watched as my New Sheriff In Town troll pitted you guys one against the other. To watch the verbal exchanges was reward enough, but to watch you guys argue amongst yourselves was the best yet.

You guys went nuts looking at headers while stumbling over yourselves to get "one up" on the other in the quest to figure out from whence my post originated.

The best part of this was when Paul himself commented that he would be posting complaints to my ISP for my sheer audacity. For what? I did not use Paul's name, remember? I used a name similar to, but not exactly as Paul spells his name.

Seems that stuffed-shirt Paul and his like-minded egocentric cohorts dislike being chastised, or worse, being made fun of.

By the way, Paul, I'm still waiting to see those complaints you offhandedly said you would lodge. Empty threats?

Sorry John, do some reading for once as that is the reality of the Canadian system. You'll actually learn something if you do research yourself and not just listen to NPR and CNN.

Now, on the other hand, if you live in the U.K., you'll still have healthcare through the end of the year, but if you are too old, they just let you die as it is not worth the expenditure to keep someone old alive even longer. But again, hey, your estate gets to keep the money!

Come on, this isn't really John now is it? Hillary Clinton, is that you?

John,

Just get on digital modes. Don't worry about CW. Digital is where the
fun is and the copy is much better.

A buddy of mine in St. Louis and I experimented with low power and
various digital modes last night on 40 meters. CW was marginal. The
best was DominoEX with FEC - just about 100% all the time and it also
has a second channel to display additional information.

CW can be fun at times, but maybe it's not your thing. Let the
stone-age hams continue with CW, and move up and on to the digital modes.

MultiPSK, while a bit cluttered and ugly, is a great program you can
use. MixW is cleaner looking and very good, but not as many
capabilities in the program.

Move on and start having fun.

JDB

Perhaps those World Cup listeners were simply not some of the most discerning folks when it comes to audio quality?

If you want easy...and most of the CW whiners do...why don't you just hook your laptop up to your DSL line and stay the hell off the air?

Jeez, you've got a pathetic joke for an exam now with canned questions to memorize and no code to learn. Too bad you're not still in your mother's womb so you don't have to feed yourselves. Though you have deluded yourselves into believing you are "hams," you are hardly believable when you wear that title. The only reason you have been able to slip through into the dumbed-down requirements and some sort of fcc "license" sham is because your appliance manufacturers that make your rigs and the charlatans like the arrl are selling out the hobby so they can sell you things.

It's ALL ABOUT THE MONEY and you no-coder idiots have fallen for it.

As for traditional, genuine "hams, we may be from the "Stone Age," but once the dinosauers became extinct the pristine landscape took on pollution and overcrowding. You simpletons have all drank the Kool-Aid and cannot see that you are parties to the eventual elimination of ham radio.

Thank God for "stone age hams," for at least there is someone still around that knows something about the avocation.

People tend to be the most demanding when it comes to the things that are most important to them. I've broadcast cups in the past, when transmissions were less easy to do, and there is nothing that gets more phone calls than a glitch in a cup broadcast... not even an earthquake in CA.

You can do a helluva lot better than cassette quality with 128 kBPS MP3s, but it requires that you spend some effort in adjusting your MP3 ripper AND that you are willing to let it take some time to do the rip instead of doing it quick (and dirty). My personal MP3 collection, ripped from my own CDs, is something of an audio history of learning how to do it properly.

I'm telling you that I would have no way of knowing if that station has
complaints. In any case, if you are, as you have said, around the Antilope
Valley area, you are not in the coverage area of either 1150 or 1140. 1140,
in fact, has a null towards Seattle, and several more towards the NE, East,
and SE. It essentially puts 95% of the power along a roughly 90 degree arc
headed west from Industry, CA. No way it should put a consistently usable
signal in your area.
>
> I thought you said 10-Q and KTLK use the same towers.

They do. They have totally different patterns, however. The pattern is
determined by the power and phase relationship into each tower. The 1150
values are very different fom KTNQ.

The governments involved licensed lots of new stations on the clears in the
knowledge that usage of skywave reception was mostly a thing of th epast and
that new services could be added to benefit local audiences.
>
> This is why the satellite companies are going to put your sorry ass
> out on the street.

Satellite is a minor irritation. It takes the dissident radio listeners who
were not listening before, anyway (18 million of those) and light users
(another 15 to 20 million).

Actually, gaming is a greater threat than satellite. There ared 132 million
gamers in the US, per Forbes this week. Time spent on computer gaming is
time not spent listdening to the radio.

If you left the batteries on a shelf they would discharge too. What
makes you think the radio is somehow causing a drain.

I have yet to find a wall-wart power supply that didn't generate noise.
The one that came with my Sony 2010 did. Just keep using those nimh
batteries, but charge them in a separate wall mounted charger.

I don't know how you can continue to find amusing a time when several
hundred were killed by a brutal military regime. As I mentioned, the
newspaperman who was taken away at the same time I was deported was
killed... a neighbor whose opinions were not appreciated by the regime was
killed and his head tossed into his patio....

Hardly something a sane person would make fun of. But nobody here would
accuse you of that.

I also find it amusing that you bragged about being days away from gaining
citizenship in Ecuador.

How interesting that you would want to become a citizen of a country with a
totalitarian regime.

You're a riot, Edweenie!

LMFAO

Here is the following from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as
Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to flee Ecuador to avoid being killed. In fact, I was a matter of days away from becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you, Frackelton?

More insight into the workings of David Frackelton Gleason, posing as 'Eduardo'... shill for Univision, and apparently a very disloyal American as well?

> memorize and no code to learn.

And your drivers' license test was what? Did they test you on
rebuilding your car?

>Too bad you're not still in your mother's
> womb so you don't have to feed yourselves. Though you have deluded
> yourselves into believing you are "hams," you are hardly believable when you

Well as a supporter of getting rid of the out-dated CW testing
requirement, I passed my test 35 years ago and a 13WPM CW exam. So I am
one of what you called a "genuine ham" but still have the intelligence
to know that a CW exam is old, stupid and mostly supported by a bunch of
stone-age hams who whine because they had to pass a more stringent test
and can't accept that others are not having to study for and pass a more
stringent test. Waaaaa, Waaaaa, Waaaaa.....I want my CW. Blah, Blah, Blah.

> wear that title. The only reason you have been able to slip through into the
> dumbed-down requirements and some sort of fcc "license" sham is because your
> appliance manufacturers that make your rigs and the charlatans like the arrl
> are selling out the hobby so they can sell you things.

That is somewhat true. So what. Heck, what does a test even prove
anymore? I can have 440 handheld family band transceivers with the same
power as many small ham handhelds. I don't need a license to use those,
so what's the big deal about stringent testing requirements for hams.
Test hams only on the legal issues and rules. We don't really even need
the other crap anymore. It's not like we dealing with lethal voltages
all the time like the days of ol'.

>
> It's ALL ABOUT THE MONEY and you no-coder idiots have fallen for it.

So what if it is about the money. You need money to live on right?
What's the matter with spending money to create jobs from manufacturing,
selling, fixing, etc. ham radios. Maybe it's also about having
experienced radio communicators in an emergency and a lot of extra

equipment in home inventories.

>
> As for traditional, genuine "hams,

What is a genuine ham? Someone who knows CW? That's a laugh. Look at
all the bickering "genuine hams" who passed that all important test and
13 or 20WPM CW and who argue and fight on the bands. Did you listen to
75 Meters? And I mean going back 30+ years ago? Your testing did not
stop the idiot "genuine hams" back then now did it?

>we may be from the "Stone Age," but once
> the dinosauers became extinct the pristine landscape took on pollution and

IBOC is a propriatary system. If we are going to have digital radio,
which I believe we will, it should be a non-propriatary system so one
company is not getting a royalty from every radio sold and every
broadcasting station.

I had lived there 7 years. I had 12 operating radio staitons and a dozen more CPs. My family was there. And it was not a military regime until a few months prior. I had the feeling the military would be gone soon.

You just don't get it do you. There are conditions for each mode that will make that mode "the best". Every mode has its place. That goes for voice, all the multiplicity of digital modes and yes CW. Last night you had the best luck with DominoEx. Another night RTTY might be better. Another night, voice might be more intelligible. Yet another night will favor CW.

Based on what I've read about DominoEX, it is a form of Multi-Frequency Shift Keying. This variation looks to be more robust than others, however, anything that can compromise FSK and MFSK has the potential to compromise DominoEX. It will merely be a matter of the degree of severity needed before it becomes unusable.

Just because something is old doesn't make it useless or stone age. Pencils have been around far longer and are still highly useful.

Actually it was a simple realization on my part that half the alphabet was the mirror of the other. i.e. a/n f/l e/t etc. When I had this epiphany I basically knew the code. All I had to do was learn to receive it which I did successfully twice, once for my novice and once again when I sat for my Tech before my novice license came. Passed both tests. Haven't used it much since. My choice.

no you don't get it

CW is in radio terms stone age, simol e fact stone does not mean
useless you lack of ability to use english is worse than my problem
with it you can't use words even though you can spell em

A stone club is still leathal does that mean the army should drill and
train with stone weapons?
CW is obselete like HMS Canpous at the battle of the Falklands, like
the Bowmen that fought with em in the retreat to Dunkirk .

utility does not preclude obselenece

LEARN ENGLISH esp when yo u lhave played spelling NAZI your self

Thanks Dee, you admitted that CW is not the best mode in any condition.
You agree that different modes work better under differing conditions.
I agree. That's why is it utterly stupid to test incoming hams on one
mode of communication. Finally we agree on something.
>

Any mode can become unusable depending on conditions. The best thing is
that some digital modes can be decoded when you cannot even hear the
signal with a human ear. You just cannot do that with CW. With CW if
you cannot hear it, you cannot decode it.
>
> Just because something is old doesn't make it useless or stone age. Pencils
> have been around far longer and are still highly useful.

I agree. I never said do away with CW. I like to use it myself.
However, tube rigs suck more electricity than solid state rigs and are
bad for the environment so old things can be rather useless or damaging.
Just like CW, it's not useless, but continuing to have a CW testing
requirement is damaging and outdated.

Riding horses is fun still, but very few want them for the normal day to
day transportation now. They may be useful still, but for everyday
transportation they are no longer required. Horses are found more and
more out in the pasture where the CW testing requirement belongs.

The ''economy of broadcasting'' is on very shaky ground. Because the
NAB was afraid to give signal parity (betraying a total lack of
confidence in their content) they now must compete with 250 new
stations in every market via Sirius and XM. Real smart move.

No that has nothing to do with whether it should be tested. We do NOT agree on that issue.

CW is a valid and useful mode but it is different in nature from the other modes. All the other digital modes simply require investing perhaps as much as 30 minutes in setting up the hardware and software to get up and running even if you make your own interface. So one can quickly evaluate whether or not they will like it. On the other hand, it is impossible to determine whether you will like CW until you have learned it, which takes some time. Many people who might like it won't tackle it unless it's required as they will have a false impression that it is too hard since there are so many trying to get the code requirement dropped by trying to convince people it is difficult. It is not difficult to learn but it does take time. I've known a number of people who admitted that they wouldn't have tried it unless required to do so but now find that they enjoy it. It's rather like piano lessons. Every adult I know who took piano as a child has made one of the two following statements: a) I'm glad my parents didn't let me quit, or, b) I wish my parents had not let me quit. The very adults who, as a child, were glad to drop piano are the ones who most deeply regret it now.

> that some digital modes can be decoded when you cannot even hear the
> signal with a human ear. You just cannot do that with CW. With CW if you
> cannot hear it, you cannot decode it.

That is true but it is not a reason to condemn CW. It is merely a working parameter that one must deal with. Besides one can run CW at a higher output without risking damage to the radio to often make up the difference. Keep in mind that if you include the power requirements for the computer and monitor plus radio that a 25watt output signal for the digital mode draws more power than a radio putting out 100watts of CW.

I have repeatedly maintained that each mode has its advantages and disadvantages but the anti-CW crowd takes its particular characteristics as a reason to castigate it. They refuse to objectively evaluate their "high-tech" digital modes for their unique advantages and disadvantages. There are times when a voice signal will beat the digital modes in intelligibility. For example, PSK goes belly up with even the slightest auroral disturbance yet voices, while distorted, can still come through. It will take a higher level of auroral activity to knock out voice in comparison to that required to knock out PSK.

A well rounded ham should be able to select his/her mode on the basis of conditions and not be limited to by the fact that they were allowed to "slide" on the code training.

>

Who says you have to stick to tube rigs to run CW? I know you know better than that. Tube rigs have largely gone away (except for collectors) simply because its much easier to deal with solid state equipment. Yet if one wants to run a legal limit amp, it's going to be a tube unit as they haven't come up with a way to do it cost effectively any other way.

I strongly disagree that a CW testing requirement is damaging or outdated. There simply is not sufficient data to support that point of few. An occasional anecdote does not qualify as valid data.

> Riding horses is fun still, but very few want them for the normal day to
> day transportation now. They may be useful still, but for everyday
> transportation they are no longer required. Horses are found more and
> more out in the pasture where the CW testing requirement belongs.

>

Again I disagree. That analogy is not really valid. A better one would be comparing it to driving an automobile with a stick shift. I personally feel that every one who drives should be required to know how to drive a stick. They often get better mileage than automatics as an experienced driver can do a better job of selecting the shift point than a mere gadget. More people might select stick shifts if only they knew how to drive one.

2328. Hizballah Brings out Chinese-Iranian Silkworm Missle

Newsgroup: rec.radio.shortwave
Date: 2006-07-15 20:20:22 UTC
From: SeeingEyeDog <look@it.org>
Message-ID: <12bijp1avbi92b4@corp.supernews.com>
Source record: 83417

DEBKAfile's military sources reveal that the Israeli warship was struck from Beirut by an Iran-made C-802 shore-to-sea missile of the Silkworm family. Weighing 715 kilos, with a range of 120km, the missile is armed with a strong anti-jamming capability, which lends it a 98% success rate in escaping interception.

http://www.debka.com/article_print.php?aid=1184

China has exported several types of cruise missile systems to Iran, Iraq and Libya, including long-range C-802 Silkworm missiles and shorter-range C-801 Sardine missiles. China also recently test-fired a 150-mile-range C-803 cruise missile from its indigenously developed FH-7 strike fighter.

The FH-7 strike fighter is being considered by Iran as a replacement for its aging force of U.S.-made F-4 Phantoms. The C-803, described as a supersonic version of the C-802 Silkworm, is clearly aimed at future export sales to Middle East customers [Syria?] and is teamed with its launch platform, the FH-7 strike fighter.

The Chinese Silkworm missile, however, is normally equipped with up to one ton of high explosives, and could easily be modified for chemical or nuclear warheads. Iraq reportedly modified a number of Silkworm missiles to carry nerve gas warheads.

http://www.newsmax.com/archives/articles/2002/12/2/214523.shtml

China's role

If Iran succeeds in building larger and more accurate missiles, China will deserve much of the credit. For years, Beijing has been a major supplier of battlefield and cruise missiles to Iran. In 1987, Iran purchased Chinese Silkworm anti-ship missiles, which were sent via North Korea so Beijing could deny responsibility for the exports. Since then, Iran has advanced beyond the Silkworm by acquiring the new C-802, an anti-ship missile that is more accurate and reliable than the Silkworm and can fly about 120 kilometers. During the Iran-Iraq war, Tehran fired at least 10 coastal-based Chinese missiles at Kuwait, one of which hit a U.S.-flagged oil tanker. Iran has also acquired 20 Chinese CSS-8 surface-to-surface missiles, which can carry a 190 kilogram warhead up to 150 kilometers.

http://www.wisconsinproject.org/countries/iran/iran-missile-1997.html

Antiship Cruise Missiles

China's exports of antiship cruise missiles to Iran has caused substantial concern both in the United States and among Iran's neighbors in the Persian Gulf In spite of these concerns, China continuously conducted cruise missile

trade with Iran from the mid-1980s through the mid-1990s. Recently, China's reported sale of C-802 cruise missiles to Iran triggered a strong reaction in the United States, leading Congress to call for sanctions against China.

C-802 Missiles

After the 1991 Gulf War, Iran embarked on a naval modernization program which included the import from China of the advanced C-802 antiship cruise missile. The C-802 at the time, and to the present day, is China's top-of-the-line antiship cruise missile (though China continues missile development of more advanced versions). By mid-1997, Iran reportedly possessed approximately sixty ship-launched C-802s. In addition, Iran deployed a number of coastal C-802 batteries on Qeshm Island, a strategic point on the eastern side of the Arabian peninsula.

Reports of the C-802 sale triggered a strong political reaction in the United States. As early as March 1996, U.S. Arms Control and Disarmament Agency (ACDA) director John Holum stated that the administration was considering imposing sanctions on China for the sale, which was alleged to violate the 1992 Iran-Iraq Arms Nonproliferation Act. This act, which is also known as the Gore-McCain Act, is targeted at countries that transfer destabilizing weapons, in quantitative and qualitative terms, to either Iran or Iraq. The Clinton administration eventually decided against imposing sanctions, reportedly because it concluded that the number and type of missiles transferred were not "destabilizing."

Unfortunately the anti-code crowd sees any rational comparison of the modes as supporting their position. I do not support dropping the code requirement.

Best reception conditions exist in cars, with relative isolation fro line noise, computer noise, etc. and n walls / rebar to go through to get to the radio.

Most installs are in the car. 1/3 of radio listening is in the car. So drop
that 10 million to the equivalent of 3 million.

Arbitron.

>If Arbitron is so accurate how come they're
> moving toward passive automated measurements?

You are referring to the people meter. The advantages of the meter are
measurement of radio, TV, streaming, cable and satellite in one survey and
faster delivery of data (it is fed daily form the meter to Arbitrron)

There is not a sidnifican change in usage of each station or its ranks in
the market, as proven by 2 years of testing in Philadelphia and a year in
Houston, still ongoing.

The biggest thing the meter shows is that the diary method is very accurate.
>
> I guarantee you that satellite radio is siphoning off your best
> customers; tech savvy early adopter types with disposable income.

No, it is not. I have looked at satellite diaries from a bunch of markets
and such is not the case. In fact, I programmed five XM channels over the
first 3 years of that service, and did not find that tue there, either.

> These are just the the low hanging fruit, too. Followed by news
> junkies, music niche afficionados and other underserved pockets.

The biggest users are interstate truckers, folks who drive from one city to
another for work, and partisans of formats that just do not exist and can
not exist on terrestrial radio, like 50's oldies, real jazz, etc.
>
> What you'll have left is brain dead lowest common denominator zombies.

There is no qualitative data supporting this.

At the current rate, it will take another 4 to 5 years to get to a 1% share of listening, or the equivalent of one very low rated station in each market.

You might want to try 5681 for "Plymouth Rescue" out of Plymouth, England. I haven't parked on that frequency for some years but I imagine it may still be in use.

5695 is supposedly a secondary freq, shared with "Edinburgh Rescue" which may also use 5681 as a primary.

Someone from the other side of the pond may have some info that may be more up to date

http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=23245

Palestinian Historical Revisionism

The cartoon in the July 6 edition of Al Quds depicts a Palestinian and an Iraqi being crucified on the same cross. This expresses a common Palestinian motif, found in both text and cartoons, that depicts Palestinians as Jesus, and Jesus as a Palestinian.

Historical revision is a backbone of Palestinian political and academic behavior, as the leaders attempt to create a separate "Palestinian Arab" history and identity for themselves, distinct from the general Arab and Islamic history. "Palestinian" Arabs are a very recent creation, and did not exist before the advent of PLO terror in 1965. Note, for example, that under UN resolution 194 in 1948, refugees were not called "Palestinian Refugees,"

relating to a national identity, but were called "Palestine Refugees,"
referring to geography - from where they came.

Jesus was Palestinian, the Palestinians are Jesus
One aspect of this attempt to create a Palestinian history is to present
Jesus, who according to Christian scriptures was a Jew (Judean) living in
the land of Judea-Israel, as a Palestinian. (In fact the name was changed
to Palestine 136 years after Jesus' s death as part of Rome's plan to cut
the Jews' ties to their Land of Israel.)

Jesus has even been presented by Palestinians as the "the first Palestinian
Shahid - Martyr for Allah," [Al-Hayat Al-Jadida, January 17, 2005] applying
to Jesus Islamic theology that evolved centuries later. On a culture program
on Palestinian TV, a Palestinian artist depicted Israeli soldiers arresting
Jesus, and explains that Jesus symbolizes the Palestinians.

I just did a Google and found this on "Plymouth Rescue", which has apparently been closed. Alo indicates that the frequency that may now be in use is 5680 vs. 5681. I seem to recall some slight frequency shifts a number of year ago.

Dee, you can disagree all you want. The fact is that the world is moving on and away from CW testing. Not the mode, but the testing requirement. It is just outdated and not necessary. If you want to learn it and then use it, great. The time has come to stop forcing an old mode onto people. We can debate the merits of CW all day. In 200 years, no one will be using it. It will die a natural death like all languages because the world evolves. Better things come along. And like many humans, you are resisting change because people hate change. But change is inevitable. You cannot stop this change and it is a change for the better even if you won't admit it. History will show the only way to save the Amateur Radio Service and help its growth is to evolve and change. Out with the old and in with the new. Those that won't evolve will fade from the earth just like stone-age man. Good bye CW testing requirement. Your departure is long, long overdue.

It's like riding a bicycle when you could be driving an SUV.
If you like to do it, then do it, but don't force others to
adopt your particular favorite aspect of our hobby. There's
room for many favorite aspects.

For communications capability under difficult conditions, CW
cannot hold a candle to PACTOR II. For fun, PACTOR II cannot
hold a candle to CW. That's my personal experience and opinion.

Very well put. Every mode is useful, important and valuable in different situations. What's unfortunate, is that the only modes the anti-CW crowd wants and supports are "Lazy Mode" and "Retard mode"

That is the mantra we keep hearing.

2.5 million subs is 1% of the potential audience. Satellite passed
that years ago. If you think people listen to satellite and (not
even) free radio equally, once they have experienced satellite, you
are dreaming.

And the fact that you do not acknowledge the special nature of the
KGOs and KSLs of the world out here in the American West shows a lack
of understanding of broadcasting fundamentals. Forget about sales and
think about service.

Your off-hand dismissal of the half of the population that chooses to
live beyond the suburbs is crass and just makes me hope that the death
of corporate cookie cutter radio comes quickly.

Never protested any wars.

Got a good lottery number in '69, thanks a bunch.

That being said, people who volunteer for corporate wars are guilty.
They do no service to a noble calling when they facilitate a corrupt
government's maniacal plan for global conquest.

Lookie here; this is how shit works:

''In essence, the United States had engaged in a massive covert
operation designed to remove a democratically elected leader from
power and reinstall an authoritarian monarch (a move which makes a
mockery of our currently stated desire to "spread democracy" in the
Middle East).

This affair had several disastrous ramifications for the future of American-Iranian relations. First, the Shah, from that point forward, was viewed as a creature of America. Consequently, America became an accessory to his every oppressive act during the subsequent 26 years of his rule. Second, the American embassy in Tehran was permanently marked as a "nest of spies" in the eyes of the Iranian populace. And third, Iranian democracy was strangled in its crib.

The next time the populace rose to overthrow the Shah (in the 1970s), they viewed America as their enemy and were cheering a leader who was significantly less democratic than Mossadeq. When rumors began circulating that the Americans were going to bring the Shah back via yet another covert operation, the Iranian mobs responded by seizing the US embassy in Tehran and holding its workers hostage''

I use the same type of rechargeable batteries in my Eton E5 and my Sony ICF SW7600GR:

* batteries acquired at the same time
* charged in the same standalone charger
* swapped between the radios to factor out bad batteries

Side by side, rechargeable batteries last longer in the SW7600GR than in the E5. Even if I use the SW7600GR more in a particular time period, the E5 will still end up with depleted batteries first.

Now, let me tell you what I haven't yet tried. I don't know how accurate the battery level sensors are in these two radios. An excellent experiment would be: when the E5 shows that the batteries are too low, take them out and put them into the SW7600GR. Attempt to power on the Sony and see if I can get more life out of them before that radio declares them too low.

We all do - you're the first to admit it publicly, though. That took a lot of courage, Cuhulin. Such stark honesty in a place where the critics and detractors can be brutal. My hat's off to ya'.

But it seems that Y-Man has this ongoing fascination for Ms. Reno. It might have been a slip of tongue (or keyboard) but he once mentioned the prospect of perhaps licking Ms. Reno's face. Right here on rrs. True story. Run a search and see for yourself.

I'm hoping that the Y-Man can claim momentary chemical impairment or some other acceptable rationale for his fantasy about Ms. Reno's face.

Meantime let's keep him in our prayers that it's not something worse and lingering.

Nope. You are assuming that subscribers will not use terrestrial radio at all. This is proven quite inaccurate.

Second, most receivers (over 90%) are fixed in vehicles. That means only 30% of the radio listening time for each person is reachable by satellite.

The 10 million actual subscribers, multiplied by 0.30, are "worth" 3,000,000 listeners. Since they only listen poart of the time to XM wherever it is installed, they can get about a 0.7 share of listening.

Actual measurement shows it to be more in the range of 0.4%.

> Satellite passed
> that years ago. If you think people listen to satellite and (not
> even) free radio equally, once they have experienced satellite, you
> are dreaming.

I know that. Subscribers to satellite with fixed, in car receivers, listen to over two times as much free radio as satellite. In truth, since most subscribers also listen to some terrestrial radio where they have satellite, the percentage is 75% free and 25% satellite.
>
> And the fact that you do not acknowledge the special nature of the
> KGOs and KSLs of the world out here in the American West shows a lack
> of understanding of broadcasting fundamentals. Forget about sales and
> think about service.

The day of KGO and KSL and KOA and... uh, and, uh.... well, of the few big night signals is gone. Daytime radio audiences are 2 to 4 times greater than night audiences, and AM at night has a lower share of radio listening vs. FM

than it does in the daytime.
>
> Your off-hand dismissal of the half of the population that chooses to

Let me see... 60% of the US population lives in the top 50 metros. So half the population CAN NOT live in rural areas. The top 100 markets have bring big city dwellers to over 70% of the US population.

Your math is off. Both on radio and population.

So, let's re-cap Mark's wonderful life, shall we:

1) He was drafted into the US Army.
2) He is a member of the Chemical Corps.
3) The military won't let him retire.
4) He doesn't serve under the name 'Mark Morgan', but that's okay, 'cuz
the FBI, DOD, and CIA have all told him he can do it.
5) He is on-the-lam from stalking former marines and fatal attraction
ex-wives
6) He was, until recently, paying $5/hr. to access his ISP
7) He has a 248 IQ, but can't figure out how to use a spell checker.
8) He is a bi-sexual 33 yr. old Pagan male ham who likes to be spanked.

9) He can't find any action on the military base in Central IL, so he
has to ask people on USENET.

Have I missed anything?

Whew ... dag-nabbit Y-Man don't leave us hanging like that. Hundreds of thousands of SWLers on here depend on you.

Glad you survived the tryst with Ms. Reno. Thanx for the update on her .. ahem .. features. We were expecting "hung like a horse with nads that won't fit in a dump truck" after the machisimo she demonstrated at Waco.

Hopefully this lost bet has cured you of any compulsion to gamble ever again.

Or else next time you might wake up between Madelyn Albright and Cynthia McKinney.

Ewwwwwwwwww ... somebody bring the clorox.

I thought I saw a Superradio II in a beer advertisement the other day... I guess it wasn't just the beer I was drinking (not Corona) making it appear so.

I'm guessing that they just grab whatever props are available around where they are shooting, and the local guy selling beer on the beach must have had the Superradio.

> facility/hospital shut down for the rest of the year because it ran
> out of government money (a typical scenario in Canada), there will be
> no one to give you any care and you'll just die.

Pray tell, oh wise one, from what source are you getting this information? You claim that this is a typical scenario in Canada, which is utter BS (= Bush shit), which means that it happens all the time. It seems rather strange that none of this seems to make the headlines or news.

BTW, I overheard this while I was visiting in Toronto and witnessed an accident: " Wow! The police and ambulance are much quicker here than in Atlanta".

Maybe they just don't want you to know the truth? Not surprising, since the
government in CanaDuh woud fall if you ever discovered the truth.

> BTW, I overheard this while I was visiting in Toronto and witnessed an

Sorry Blow Code, but you cannot turn back the hands of time. The 13 & 20 WPM tests are gone forever. And soon, the CW testing requirement will be eliminated completely. It's the will of the majority. It's evolution. You can whine, cry and carry on all you want about the CW testing requirement. It is going the way of the buggy whip, the Ford Model-T, dinosaurs, the carrier pigeons, and a host of other old, outdated, and unnecessary things of the past. Good Bye and Good Riddance.

IBOC interference sounds like the usual sort of radio hiss which everybody
is used to, but there's a whole lot more hiss.

Were stations getting swamped with complaints about more common sources of
noise such as from computers and TV sets?

Am I missing something here? I thought "nobody" was bothered by IBOC
interference.

"Nobody" that Edweenie and his minions care about, at least. Edweenie and his ilk care about Cubans and anybody that is of the "Hispanic" persuasion, but they don't care about "Americans".

Ask Edweenie about renouncing his US Citizenship.

NRSC-5 STANDARD IS AVAILABLE ON THE WEB

The NRSC-5 Standard is the long-awaited document containing the
technical details of the AM & FM IBOC (HD Radio) broadcast systems.
The document is web-posted as a pdf file and is available for
downloading now.

Although the cover of the document claims "IN-BAND/ON-CHANNEL" digital
radio broadcasting is being discussed, the title is misleading. The
iBiquity IBOC system is really an "IN-BAND/OFF- CHANNEL" affair; that
is, use of IBOC can cause interference well beyond the assigned
frequency of the host analog station.

Take, for example, the reports of interference indicating that the new
IBOC system on KNX, 1070 kHz, Los Angeles, is tearing up the analog
reception of 50,000 watt XEPRS, 1090 kHz, in parts of the greater Los
Angeles area. XEPRS had a fine signal in the affected areas before KNX
switched to IBOC. This interference had not been anticipated based on
past conversations between our office and the IBOC system inventor,
iBiquity, so the situation is disappointing to say the least.

Here, then, is the NRSC-5 document. The spectrum occupancy charts
should be of great interest to many:
http://www.nrscstandards.org/Standards/NRSC-5/NRSC-5.pdf
(CGC Communicator via Rene Tetro, PA, NRC-AM via DXLD)

I've been looking at the NRSC-5 standards this morning and found
something that we all knew inherently, but that the standard now shows
definitively. If you look at the chart showing the hybrid analog-
digital signal with 5 KHZ analog audio, you will see that the actual
digital information does not begin until you are 10 KHZ removed from
the carrier. The digital signal takes up 5KHZ of bandwidth from
about 10 to 15 KHZ from the carrier on upper and lower sidebands.

Consequently, an AM IBOC station on 1100 will take up spectrum from 1085 to 1115 KHZ, wiping out not only the first adjacents (1090 and 1110) but creating havoc with the second adjacents (1080 and 1120), as well. Again, this is pretty much what we have all heard with our own ears and/or suspected, but is now in print for all to see.

A random 10 minute spectrum analysis of one IBOC station here in Philly shows that they are not even close to being within the proposed NRSC-5 mask. How many others out there are like this? This particular station I am sure would be brought into compliance because their engineering department is exceptional. But what about all of those little stations with marginal contract engineers. That's the kind of thing that worries me.

The upside (if there is one) is that if and when AM becomes all digital, and the analog part of IBOC goes away, we will be back to about a 10 KHZ bandwidth -- actually slightly less. Of course, a lot of us on the older end will probably not be around to see this "brave new world." (Rene F. Tetro, ibid.)

I've talked the IBOC spectrum several times on this mailing list, but there still seems to be a lot of confusion about it. See http://topazdesigns.com/iboc/RG-Jul04-08.pdf for more info (Barry McLarnon, VE3JF, Ottawa, ON, ibid.)

Unless all bets are off because the interference occurs over US soil and XEPRS is licensed to Mexico, NO WAY is Los Angeles outside of XEPRS's protected daytime coverage area. According the Bob Carpenter's AMSTNS program, which uses data from the FCC AM database, XEPRS, which is ND days, puts out an RMS field of 3242.44 mV/m @ 1 km. That works out to a highly improbable (given the 178-degree tower height) 458+ mV/m/kW @ 1 km. However, perhaps XEPRS runs a bit more than 50 kW days; it is, after all, a Mexican station. If you accept the above numbers, however, 200 km away over a salt-water path at KNX, XEPRS should deliver a field in excess of 16 mV/m. If you use a more probable inverse-distance field of 380 mV/m/kW @ 1 km for XEPRS, you get a field at 200 km of more than 13 mV/m. The most warped definition of protected AM daytime-groundwave service area that I have heard is that it now extends only to 5 mV/m. As far as I'm concerned, it still extends to 0.5 mV/m. But there can be no question that KNX should not interfere with XEPRS within XEPRS's 13 mV/m contour--unless the fact that XEPRS is a foreign station trumps the other rules (Dan Strassberg, AC 707, ibid.)

Dan: It's my understanding that in all cases involving protection of stations in the US and adjacent countries (Canada, Mexico, Bahamas, etc) a station is protected in its own country but has no protection at all outside its border (Chuck Hutton, ibid.)

Therein lies the rub. The international agreements state that stations are only protected within the borders of the country that they're located in. IBOC/IBAC is thus an effective weapon against the border blasters as well as the rimshots. There is also no doubt, however,

that the use of the AM IBOC system is in clear violation of those same agreements. I made that point in my comments to the FCC last year, and I'm still waiting to see how they respond. Not that I have much doubt (Barry McLarnon, VE3JF Ottawa, ON, ibid.)

Barry, Now what would happen if XEPRS, XETRA, and the other border blasters decided to go 500 KW? I think the Mexican gov could be bought off if needed. I think a 500 KWer aimed at LA would solve the IBOC problem. Hi (Patrick Martin, Seaside OR, ibid.)

It is not interference. It is the delay. HD has a fallback the analog feature, whereby if the digital signal drops out, the analog signal comes in. This requires buffering the analog signal by 8.1 seconds to compensate for the delay in the digital processing.

Similarly, stations turn off "indecency" delay during live sports.

This is to allow listeners with radios to listen to play by play in the stadium. However, with the FCC announcing today a review of sports broadcasts for indecency, stations will probably keep the indecency delay going, eliminating the ability to have simultaneous play by play forever.

Gee, before NRSC, an AM occupied +/- 15 kHz.

Really?

Here is the following from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as
Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to flee Ecuador to avoid being killed. In fact, I was a matter of days away from becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you, Frackelton?

More insight into the workings of David Frackelton Gleason, posing as 'Eduardo'... shill for Univision, and apparently a very disloyal American as well?

>> Dee, N8UZE
>>
>>
>

As it happens, I do think people should have to learn on a stick shift, but
I don't support code testing. If you can't drive a stick shift, you can't
drive my car, as every car I've had has had a stick shift and so will every
car I buy in future. OTOH, every rig I've bought has come with a mic, and
none of them came with a key. Now, I know you can get some QRP rigs that
are CW only.

The point is, there is a very real chance that it may be necessary to drive someone else's car in an emergency, or even just to help out. What happens when you need to get someone to the emergency room and the only car available is a stick shift? It's no good saying that statistically manual shifts are declining in sales, as there are plenty of us who will never buy an automatic.

OK, maybe you can say that you don't own a mic, and all the rigs in your shack are hooked up to a key (good luck on the local repeater!). What then is the realistic scenario where I will have to use one of your radios to save the world? (or even to save the next door neighbour) Doesn't seem to likely, does it?

2474. Hezbullah's Iranian Zelzal Rockets

Newsgroup: rec.radio.shortwave
Date: 2006-07-16 17:15:19 UTC
From: SeeingEyeDog <look@it.org>
Message-ID: <12bkta5gaac5u3e@corp.supernews.com>
Source record: 83761

Hezbullah's rockets

What we have seen until now have been Katyusha's and Fajr's, but Hezbullah has longer range rockets that we know about but have not seen yet.

HaAretz reported two months ago that Hezbullah has rockets called the Zelzal-1 and Zelzal-2.

According to HaAretz:

The solid-fuel rockets lack an independent guidance system and their accuracy is questionable but they can still cause considerable damage.

According to intelligence estimates, the rockets are meant to strike non-specific areas, such as towns and cities, and carry a warhead estimated to weigh 600 kilograms. This latest development doubles the range of weapons previously in Hezbollah's arsenal. 600 Kilos is a large warhead. For those of you who think in pounds, that's more than 1300 pounds. That's the size of a good car.

The rockets delivered to the Hezbollah have appeared under different names. One is Zelzal-2, and its earlier model is the Zelzal-1. Another Iranian name for the rocket is Nazeat.

The rocket was first seen in a military parade in Tehran in September 2005, the first such event following the election of Mahmoud Ahmadinejad as president.
...
In 1996, Iran tested the Zelzal-2 and then put the missile system up for sale. The Zelzal-2 is 8.32 m in length and 0.61 m in diameter, with a launch weight of 3,400 kg. It carries its 600 kg warhead to a maximum range of 200 km (124 miles).

http://www.missilethreat.com/missiles/zelzal-1-2-3_iran.html

International defense journals have reported that the Iranian rockets have been stored by the Hezbollah in special bunkers in a number of locations in the Bekaa near Lebanon's border with Syria.

RED ALERT: GETTING READY

We are now in the period preceding major conventional operations. Israel is in the process of sealing the Lebanese coast. They have disrupted Lebanese telecommunications, although they have not completely collapsed the structure. Israeli aircraft are attacking Hezbollah's infrastructure and road system. In the meantime, Hezbollah, aware it is going to be hit hard, is in a use-it or-lose-it scenario, firing what projectiles it can into Israel.

The Israeli strategy appears to be designed to do two things. First, the Israelis are trying to prevent any supplies from entering Lebanon, including reinforcements. That is why they are attacking all coastal maritime facilities. Second, they are degrading the roads in Lebanon. That will keep reinforcements from reaching Hezbollah fighters engaged in the south. As important, it will prevent the withdrawal and redeployment of heavy equipment deployed by Hezbollah in the south, particularly their rockets, missiles and launchers. The Israelis are preparing the battlefield to prevent a Hezbollah retreat or maneuver.

Hezbollah's strategy has been imposed on it. It seems committed to standing and fighting. The rate of fire they are maintaining into Israel is clearly based on an expectation that Israel will be attacking. The rocketry guarantees the Israelis will attack. Hezbollah has been reported to have anti-tank and anti-air weapons. The Israelis will use airmobile tactics to surround and isolate Hezbollah concentrations, but in the end, they will have to go in, engage and defeat Hezbollah tactically. Hezbollah obviously

knows this, but there is no sign of disintegration on its part. At the very least, Hezbollah is projecting an appetite for combat. Sources in Beirut, who have been reliable to this point, say Hezbollah has weapons that have not yet been seen, such as anti-aircraft missiles, and that these will be used shortly. Whatever the truth of this, Hezbollah does not seem to think its situation is hopeless.

The uncertain question is Syria. No matter how effectively Israel seals the Lebanese coast, so long as the Syrian frontier is open, Hezbollah might get supplies from there, and might be able to retreat there. So far, there has been only one reported airstrike on a Syrian target. Both Israel and Syria were quick to deny this.

What is interesting is that it was the Syrians who insisted very publicly that no such attack took place. The Syrians are clearly trying to avoid a situation in which they are locked into a confrontation with Israel. Israel might well think this is the time to have it out with Syria as well, but Syria is trying very hard not to give Israel casus belli. In addition, Syria is facilitating the movement of Westerners out of Lebanon, allowing them free transit. They are trying to signal that they are being cooperative and nonaggressive.

The problem is this: While Syria does not want to get hit and will not make overt moves, so long as the Syrians cannot guarantee supplies will not reach Hezbollah or that Hezbollah won't be given sanctuary in Syria, Israel cannot complete its mission of shattering Hezbollah and withdrawing. They could be drawn into an Iraq-like situation that they absolutely don't want. Israel is torn. On the one hand, it wants to crush Hezbollah, and that requires total isolation. On the other hand, it does not want the Syrian regime to fall. What comes after would be much worse from Israel's point of view.

This is the inherent problem built into Israel's strategy, and what gives Hezbollah some hope. If Israel does not attack Syria, Hezbollah could well survive Israel's attack by moving across the border. No matter how many roads are destroyed, Israel won't be able to prevent major Hezbollah formations moving across the border. If they do attack Syria and crush al Assad's government, Hezbollah could come out of this stronger than ever.

Judging from the airstrikes in the past 24 hours, it would appear Israel is trying to solve the problem tactically, by degrading Lebanese transport facilities. That could increase the effectiveness of the strategy, but in the end cannot be sufficient. We continue to think Israel will choose not to attack Syria directly and therefore, while the invasion will buy time, it will not solve the problem. Hezbollah certainly expects to be badly hurt, but it does not seem to expect to be completely annihilated. We are guessing, but our guess is that they are reading Israel's views on Syria and are betting that, in the long run, they will come out stronger. Of course, Israel knows this and therefore may have a different plan for Syria. At any rate, this is the great unknown in this campaign.

The other unknown is the withdrawal of Western nationals from Lebanon. We have received very reliable reports from sources in Lebanon who assure us

Hezbollah does not intend to renew hostage taking, which is deemed an old and nonproductive strategy. These same sources have reported splits in Hezbollah over how aggressive it should be. We believe Hezbollah has no current plans for hostage taking. We are not convinced, however, that in the course of the battle it will not change its mind, or that with weakened central control elements, elements of Hezbollah will take hostages as a bargaining chip. Regardless of what Hezbollah is saying now, hostage taking must be taken seriously as a possibility.

The U.S. Embassy in Beirut is now saying plans are being developed in concert with the U.S. Defense Department for extracting U.S. nationals from Lebanon. A convoy scheduled to travel from the American University of Beirut to Amman, Jordan, via Syria, was cancelled at the last moment, with participants being told that the embassy has other plans.

There are said to be 25,000 U.S. citizens in Lebanon, but many of these are Lebanese-American dual nationals who actually live in Lebanon as Lebanese. These are less visible, less at risk and have greater resources for survival. The most at-risk Americans are those who hold only U.S. papers and are clearly American, such as employees of American companies, students studying at Lebanese universities and tourists. There is no clear count of these high-risk nationals, nor is there a count on high-risk nationals from other non-Islamic countries. There are thousands, however, and getting them out will be difficult.

The U.S. Embassy is considering flying them to Cyprus. That would mean an air bridge from Beirut International Airport, where a single runway has been opened, to Cyprus, a short flight away. The United States will not do this while Beirut is under attack, so it will ask the Israelis to create a safe zone and air corridor during the evacuation. But the threat on the ground is real, and we suspect the United States will send troops in to secure the perimeter and surrounding areas against shoulder-launched missiles. They will also keep the precise timing secret, although thousands of people in Lebanon -- the evacuees -- will know it is coming.

There was a Marine Expeditionary Force on maneuvers in the Red Sea a few days ago. We do not know where they are now, but they had 2,200 marines on board -- the right number to secure extraction. We suspect aircraft will be chartered from airlines in the region and that some U.S. Air Force and allied aircraft might also be used. Doubtless, the United States is busy organizing it. Given that the United States cancelled several ad hoc withdrawals, it must be highly confident it has the process nailed; we would expect this operation to get going sometime Sunday. Assuming aircraft that can carry any average of 200 people (purely arbitrary) , 50-100 flights could get everyone out. Assuming that everyone can be notified and can get to Beirut International Airport. That won't happen. The remainder who are at risk will probably be advised to move into Christian areas east and northeast of Beirut and to keep their heads down for the duration. It is also possible that discussion of Cyprus notwithstanding, the path will be through Syria, but we doubt that.

In the meantime, that Israel has not sent major ground units into Lebanon yet (lots of small units are operating there) but is taking rocket attacks and hunkering down indicates it does not plan to act piecemeal. If we were to guess, the main thrust would likely begin late Sunday night or Monday morning. They will be ready by then. Of course we are not privy to Israeli operations, so it could be delayed 24-48 hours to give forces a chance to gear up. But given the Hezbollah bombardment, the Israelis are under pressure to move sooner rather than later.

We are in a relatively quiet spell (emphasis on quiet) . Both sides have made their strategic decisions. Both know how the war will be fought. Hezbollah thinks it can give as good as it will get for a while, and will ultimately be able to regroup for a guerrilla war against the Israelis. Israel thinks it can immobilize and crush Hezbollah quickly and decisively and will be able to withdraw. Both sides know Syria is the wild card, and neither is quite sure how it will play its hand. One side is wrong in its expectations about the outcome. That's the nature of war.

Ahhhh... now the 'tard starts to back-pedal!

Here is the following from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as
Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to
flee Ecuador to avoid being killed. In fact, I was a matter of days away from
becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their
current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you
un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American
would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you,
Frackelton?

More insight into the workings of David Frackelton Gleason, posing as
'Eduardo'... shill for Univision, and apparently a very disloyal American as
well?

2478. David -FYI- Mexican Radio Stations Have No Right To Be Heard In The USA !

Doh ! - David - So Tell Me . . .
What Right Do Mexican Licensed Radio Stations like XEPRS
and XETRA have to Broadcast 'into' the USA and reach the
Greater Los Angeles California Radio Market ? ? ?

-IF- An American Licensed Radio Station is 'interferring with a
Mexican Radio Station inside of the Nation of Mexico - Then
they {The Mexicans} have a Valid Complaint [.]
-if- However they can not be heard in LA - No Problemo !
Note- That "LA" is about 213 km ~ 132 Miles from "TJ".

yes - it is that simple ~ RHF

- Take, for example, the reports of interference indicating that the
new
- IBOC system on KNX, 1070 kHz, Los Angeles, is tearing up the analog
- reception of 50,000 watt XEPRS, 1090 kHz, in parts of the greater Los
- Angeles area. XEPRS had a fine signal in the affected areas before
KNX
- switched to IBOC. This interference had not been anticipated based on

- past conversations between our office and the IBOC system inventor,
- iBiquity, so the situation is disappointing to say the least.

I'm just curious whether they have been sold in Europe.

I have a FH 7 - MK III now, and see

- it has the same plastic case as the ICF 2001D/2010D..
- SW from 90 donwto 13 meter

Is there some site with these kind of radio's??

It was bought in the Middle East.

Even those who tout digital modes - they want to buy an interface and
software and "be" on digital. Then they wonder why the signal they're
hearing, that sounds just like the digital mode they use, doesn't work
on their setup. Maybe because a PSK program won't decode SSTV?

Reminds me of the GPRS "exerts" who can't understand why changing the
"code" on their radios doesn't eliminate the interference from the guy
next door.

The anti-CW crowd wants no code and a written test you can memorize
the answers to. It's their "right" to be on the air, isn't it? Even
if they need 2 more clues to be totally clueless?

Saying a personal matter is none of your business, when I do not even know who you are (I know _what_ you are, of course) is hardly answering a question.

learn what you are tlaking about psk31 sounds very little like sstv and
most of the programs that can demolate it show you a spectrograhand
they look nothing alike

there is some time confusion in wether that sgnal BPSK 31 or QPSK31 but
the marvels of Windows wallo me to run the output of the sound card
interface to at least 2 program so it can be worked out

you just want to bash any ham that doesnot follow your morse fetish

> if they need 2 more clues to be totally clueless?
it is our right and everybody else right that any restriction to our
access to public spectrum be "neccisary and proper" (one of 3 clauses
in the constitution that give the power to regulate the airwave to the
govet at all) otherwise the 10 reserving all right and power to the
sates or the people applies modifing that is the thrid place where the
consititution of US touches on this issue mby making the constitution
and the TREATIES made the supreme law of the land

according the Govt lost the POWER to impose Morse Code test on the ARS
unless it can be justified under some other powere of the Constitution

I find it interesting that the ProCode tes crowd has such disrespect
for that document

Shit! If somebody called here and asked ME if I ever renounced my citizenship I'd tell them NO, even if I didn't have the slightest idea who the hell they were.

You, on the other hand, being the pathological liar that you are now try to put the spin on your outrageous bullshit!

It's like I said, Edweenie, any true American would never hesitate in answering that question.

Here is the following from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to flee Ecuador to avoid being killed. In fact, I was a matter of days away from becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you

un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you, Frackelton?

More insight into the workings of David Frackelton Gleason, posing as 'Eduardo'... shill for Univision, and apparently a very disloyal American as well?

"Canuck" is a slang term for "Canadian" in Canadian English and sometimes in
American English.
The term was coined in the 19th century, although its etymology is unclear.

Kol Israel 9400 actually put in a pretty usable signal here during their English broadcast at 1900-1925. 11590 was unusable.

Yesterday, 11590 was very marginal and 9400 was useless.

Source record: 83789

David,

The Days of the Clear Channels like KGO and KSL are Numbered.
- - - And Then There Was IBOC Digital Hash Everywhere !

Once HD-IBOC AM/MW Radio is the norm at night with
Thousands of Local AM/MW Radio Stations trying to
saturate their Local Media Markets with IBOC Hash so
that nothing beyond their Market gets through . . .

Then 50 KW Clear Channels will reduce their Night Time
Analog Power down to 20 to 25 KW as an effective Cost
Savings and Increase the Power Levels in the Digital
Side Bands as more and more newer HD AM Radios are
put in use by a new generation of AM/MW Radio Listeners.

Within Ten Years - At Best the Clears will become Regional
Broadcasters and only do a marginal job of that.

DX ? - What's That Daddy ?
- - - Why Son I Remember When . . . ~ RHF
.
.
. .

International allocations allow use of certain frequencies for regional broadcasting.

KGBT, a 50 kw in Harlingen, TX, pushes all its power at Mexico. What right do they have to do that? The right is based on treaties that give 1530 principally to the US to ues.

There are far more US stations pumpling power at Mexico than Mexican staitons pumping power at the US.

Looks like your Dear Author is sympathetic to Syrian/Iranian/Terrorist propaganda.

From Syria's official Propaganda media

"Those who have expressed doubts over the actions of the resistance are in one way or another implicated in the (Israeli) aggression against Beirut and Gaza."

The newspaper was referring to Saudi Arabia, Egypt and Jordan which indirectly criticized Hezbollah for "adventurism" in provoking Israel's onslaught on Lebanon and putting all Arab nations at risk.

Another Syrian government daily, Tishrin, accused Israel and the United States of waging war in order to gain total control over the region.

"After having achieved the destruction of Iraq and sabotaged all efforts to solve the Israeli-Arab conflict and find a just peace in the region, the US administration has given its green light to the Israeli government of Ehud Olmert to burn down the region beginning with Gaza and Lebanon," Tishrin said.

"This is part of an Israeli-American plan for total hegemony in the region."

Syria, which backs but denies arming Hezbollah, was the longtime powerbroker in Lebanon until an international outcry over the assassination of five-time premier Rafiq Hariri forced it to withdraw its troops last year.

http://www.breitbart.com/news/2006/07/16/060716121656.1nxaa10t.html

Iran Provider of Hezbollah's Weaponry

London, Asharq Al-Awsat- According to a source close to a high-ranking official in the Iranian Revolutionary Guard Teheran has supplied Hezbollah with approximately 11,500 missiles and projectiles.

The source said more than 3,000 Hezbollah members have undergone training in Iran, which included guerilla warfare, firing missiles and artillery, operating unmanned drones, marine warfare and conventional war operations. He said they have also trained 50 pilots for the past two years.

According to the source, Hezbollah currently possesses four types of surface-to-surface missiles, some of which extend to a distance of 150

kilometers.

http://www.asharqalawsat.com/english/news.asp?section=1&id=5651

Israeli security officials told WND today they have "concrete information" Iranian soldiers stationed at Hezbollah positions in Lebanon have aided in efforts to fire missiles into Israel since Wednesday.

Jordanian officials told WND they are "100 percent sure" Iranian Revolutionary Guard unit soldiers have fired rockets into Israel. They also said the Syrian army has provided Hezbollah with intelligence information on the locations of strategic Israeli targets to aid in Hezbollah rocket fire.

A Communist Ba'ath party official operating out of the Golan Heights told WND he has information Iranian soldiers have been firing rockets into Israel.

A senior Egyptian security official told WND it would be "very logical" if Iranian Revolutionary Guard soldiers have been helping Hezbollah fire the rockets.

At times, Revolutionary Guard soldiers can be seen operating openly at Hezbollah outposts in plain view from the Israeli side, military officials say.

http://www.worldnetdaily.com/news/article.asp?ARTICLE_ID=51075

---------- April 11, 2006 ----------

"Israel and United Nations observers have noticed a buildup of Hezbollah militants along the Israeli-Lebanese border the past month. Israeli security officials last month warned Hezbollah was looking to kidnap Israeli civilians and soldiers and escalate violence along the border."

Iran is attempting to draw Lebanon into a conflict with the U.S. and Israel and is priming the Hezbollah militia to assault the Jewish state in the event of an attack against Iran's nuclear facilities, Lebanon's Druze leader Walid Jumblatt said in an interview.

The Syrians feel at ease because of the Iranian connections. [Syria-appointed Lebanese President Amil] Lahoud is much more confident because of the alliance with the Iranians. The borders between Lebanon and Syria are open. Syria is smuggling [into Lebanon] weapons, ammunition and fighters. Hezbollah too is the best to destabilize Lebanon against independence," said Jumblatt.

Syria last April withdrew tens of thousands of troops it maintained in Lebanon, announcing it was ending its nearly 30-year occupation of the country. The withdrawal was considered a result of mounting international pressure following the assassination in February 2005 of former Lebanese Prime Minister Rafiq Hariri, for which Damascus was widely blamed.

But there has been a steady stream of reports Syrian intelligence agents continue to operate in Lebanon. Syrian and Lebanese intelligence agents have

been blamed for a series of bombings and political assassinations that have rocked Lebanon since Hariri's murder.

Jumblatt said he was unsure of the extent of Syria's intelligence network in Lebanon. He called Lebanese President Lahoud a "Syrian agent, just a puppet of [Syrian President Bashar] Assad."

He blasted the international community for "dropping the ball on pressuring Syria" the past few months.

"We heard a lot of talk about pressuring Syria last year, but have not seen much lately," said Jumblatt. "You have to ask for Bashar [Assad] to go then maybe Lahoud might go. ... I don't see it possible to change [Syria's] behavior without changing the regime."

Jumblatt warned together with Syria the Tehran regime has been funneling money and weapons to Hezbollah to use against Israel and American interests in the event of an attack against Iran's nuclear sites.

Jumblatt's statements concerning Hezbollah come in the wake of a report in London's Daily Telegraph stating Iranian Revolutionary Guard units are now deployed at Hezbollah posts along the Israeli border and are developing an advanced intelligence-gathering network for spying on the Jewish state.

A senior Israeli Defense Forces commander told the Telegraph that Hezbollah posts fortified by Iran are "now Iran's frontline with Israel. The Iranians are using Hezbollah to spy on us so that they can collect information for future attacks. And there is very little we can do about it."

http://www.johnbatchelorshow.com/audio/Jumblatt_Walid%204_07_06%209p.mp3

According to Dr. DaviD the U.S. psyops program controls Hezbollah - impressive - LMAO!

That is very mild. You should hear the never ending insults and threats the
imams on the Iranian, Syrian and Palestinian TV stations spew out all day,
every day, 365 days a year (available on satelitte all over the world). It
would fill a book of quotes every single day. For a start read MEMRI - look
it up on google.

> If Jesus were here today, He'd be Palestinian.

He is not alive today and he would have nothing to do with murderous
terrorists.
More than likely he would wave his hand and send the Palestinians to thier
40 virgins, in hell.

No station is licensed to broadcast to a specific country. They are licensed for certain powers and directional patterns. If the coverage includes parts of another nation, then the treaties come into effect.

KGBT is definitely licensed to cover parts of Mexico, and the treaties afford interference protection to that station as licensed.

Just as, for example, 1570 is a Mexican Clear Channel and no US station may interfere with its signal. Until a treaty was renegotiate, in the 70's, no US station on 1570 could operate at night anywhere in the US on 1570.

Radio Thailand 9680 coming in fairly well with English directed to Europe 2030-2045.

At 2045 I switched to All India Radio 11620, also directed to Europe with English sked 2045-2230. Very good signal.

Taliban gets smart in Afghanistan's propaganda war

KABUL -- The calls come through nearly every two hours, always from a satellite phone and usually with some new claim of an attack that the reporter must check with the US-led coalition force in Afghanistan.

Sometimes they turn out to be false. Many times, they are true but exaggerated. "I get between six to 10 calls a day from one or the other of the two Taliban spokesmen," said one journalist based in the southern city of Kandahar, a focus of the movement's insurgency launched after it was ousted in 2001. "It is mainly them who tell us first of incidents," he adds.

Under the Pakistan-backed regime, movies, videos, television or photographs of any living creature, even animals, were taboo, as they were seen as idolatrous.

But today the religious students not only watch such material, they produce and distribute it for free - usually high-quality video CDs of rousing speeches and Taliban attacks and what they call sacrifice for a "holy cause."

More than a dozen VCDs obtained by AFP in the past 10 months all carry the logos of one of three studios - Omat (Nation) productions, Manbaul-Jihad (Source of Jihad) or Abdullah videos.

These shadowy outfits produce videos for the Taliban - and probably also for Al Qaeda - in the Arabic, Urdu and Pashto languages that are aimed at potential sympathizers in southern Afghanistan and the adjoining Pakistan tribal belt, and Arab extremists.

Every film includes interviews with purported Taliban commanders who claim to have shot down US helicopters or to have killed US or Afghan soldiers.

Some show gruesome documentary footage of what are called civilian casualties of US bombings in Afghanistan, Iraq and Pakistan, or of Christians chopping off the heads and arms of Muslims in Indonesia's religiously tense Poso district.

The clips focus on children, women and the elderly. "Their targeted audience is a less-educated section of people with little power of political analysis who react religiously and emotionally."

The insurgents have seized the news agenda, analyst Joanna Nathan said. "There is an information vacuum which the insurgents are only too happy to fill," she said.

The Taliban even fill that void by claiming responsibility for attacks that they may have had no part.

Taliban's propaganda planners - finely tuned to the complicated social, ethnic and religions sensitivities of this country - are capitalizing on every weakness, playing on Afghans' cherished notions of religion and liberty from foreign occupation.

Their sophisticated campaign is beyond the capacity of the average illiterate Taliban fighter, said a high-ranking government official who refused to be identified. "There are big hands and organizations behind them," he said. "To gather data, footage and intelligence and reproduce them for Taliban interests is not what the barefoot illiterate Taliban can do in caves and mountains. It is done in cities where they have backers."

Can you say, T-E-R-H-R-A-N ?

----> hamjamming dot com ROCKS !!!!!!!!!!!!!!! Great job dude!

Now if SOMEONE could just set up an online
shrine with .MP3 files of the infamous 14.313/14.300/3.894.5
wars of several years ago, the cycle would be complete.

WWW.HAMJAMMERS.COM

Free Audio Downloads From The Dark Netherworld of Ham Radio:

The Most Infamous Lids To Ever Disgrace The Amateur Service!

This website is devoted to demonstrating what an absolutely
worthless, stupid hobby ham radio is.If anybody tells you that
ham radio is fun, or interesting, or that you will meet nice,
interesting people by becoming a ham, DON'T BELIEVE THEM!

Hams are the biggest group of whiners, snivelers, complainers
and all-around no-talent losers you will ever meet.This is
because the system itself is a veritable recipe for selecting
dweebs and idiots with pocket protectors: Take a fat
dweeb who has no friends or social skills and can't
get a date; give him a trivial exam where the questions and
answers are all available beforehand; and then give him
a license and tell him he's somehow "special". Voila!
You have an insufferable, boring ham radio operator
who thinks he's morally and intellectually superior to
other people.

It's inevitable. Don't make the mistake of getting
involved in this hobby!

WARNING: Some of the audio files are
rated "R"! Your Webmaster cannot be responsible
if you become addicted to listening to jamming recordings
and you lose your job because you don't show up for work.

Hello,
I hope ths is the right newsgroup for my question:
is there someone who knows how to make the alignment of the notch filter in a Icom R-70 receiver? I got an usde one which works, but was quite messed-up with the alignment of the IF section. I was able to re-align it by using the service manual and my instruments (signal gen, oscilloscope and RF voltmeter), but the manual does not report the procedure for notch alignment. I contacted ICom America which answered that the receiver was a very old rig and they didn't have any documentation (sic!)
Please, help...

DxAss would require higher brain functions and reasoning capabilities to
be able to contribute "...anything cogent, factual or tangible...". As

it is, he will never be able to achieve anything better than base comments.

Until you war criminals decided to destabilize Iraq, Iraq was doing a
good job of keeping Iran in check. Thanks for fucking up the regional
balance and having other countries pay a penalty for it.

2533. 30 Steps, Monthy post. Tips for Phonies.

Newsgroup: rec.radio.shortwave
Date: 2006-07-17 00:07:42 UTC
From: Slow Code <my.mail@no.spam>
Message-ID: <ixAug.5337$vO.3132@newsread4.news.pas.earthlink.net>
Source record: 83670
Cross-posted to: rec.radio.amateur.policy,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

The 30 Steps below will help all New Hams, it will also help you to find others just like yourself. These 30 steps should also be added to the present writtens.

Step One: Use as many "Q" signals as possible. Yes, I know they were invented solely for CW and are totally inappropriate for two meter FM, but they are fun and entertaining. They keep people guessing as to what you really meant. I.E. "I'm going to QSY to the phone." Can you really change frequencies to the phone? QSL used to mean, "I am acknowledging receipt", but now it appears to mean, "yes" or "OK". I guess I missed it when the ARRL changed the meaning. It is also best to use "OK" and "QSL" together. Redundancy is the better part of Lid-dom.

Step Two: Never laugh when you can say "HI HI". No one will ever know you aren't a long time CW rag-chewer if you don't tell them. They'll think you've been on since the days of Marconi.

Step Three: Utilize an alternative vocabulary. Use words like "destinated" and "negatory". It's OK to make up your own words here. I.E. "Yeah Tom, I "pheelbart zaphonix" occasionally myself."

Step Four: Always say "XX4XXX" (Insert your own call) "for I.D." As mentioned in Step One, anything that creates redundancy is always encouraged. That's why we have the Department of Redundancy Department. (Please note that you can follow your call with "for identification purposes" instead of "for I.D." While taking longer to say, it is worth more "LID points".

Step Five: The better the copy on two meter FM, the more you should use phonetics. Names should be especially used if they are short or common ones. I.E. "My name is Al... Alpha Lima" or "Jack.. Juliet Alpha Charlie Kilo." If at all possible use the less common HF phonetics "A4SM... America, Number Four, Sugar Mexico." And for maximum "LID points", make up unintelligible phonetics. "My name is Bob... Billibong Oregano Bumperpool."

Step Six: Always give the calls of yourself and everyone who is (or has been) in the group, whether they are still there or not. While this has been unnecessary for years, it is still a great memory test. You may also use "and the group" if you are an "old timer" or just have a bad memory. Extra points for saying everyone's call and then clearing in a silly way "K2PKK, Chow, Chow."

Step Seven: Whenever possible, use the wrong terminology. It keeps people guessing. Use "modulation" when you mean "deviation", and vice-versa.

Step Eight: If someone asks for a break, always finish your turn, taking as long as possible before turning it over. Whenever possible, pass it around a few times first. This will discourage the breaker, and if it is an emergency, encourage him to switch to another repeater and not bother you.

Step Nine: Always ask involved questions of the person who is trying to sign out. Never let him get by with just a "yes" or "no" answer. Make it a question that will take him a long time to answer.

Step Ten: The less you know on a subject, the more you should speculate about it in the roundtable. Also the amount of time you spend on the subject should be inversely proportionate to your knowledge of the subject even though you have no damn clue.

Step Eleven: Always make sure you try to communicate with only a handheld and a rubber duck antenna. Also, make sure you work through a repeater that you can hear very well, but it cannot hear you. This will put out a kind of "LID mating call": "Well, Joe, I can hear the repeater just fine here. I wonder why it can't hear me?" You will score maximum LID points if you are mobile, and with the radio lying in the passenger seat.

Step Twelve: If you hear two amateurs start a conversation, wait until they are twenty seconds into their contact, and then break in to make a call, or better yet to use the auto-patch. Make sure you keep the repeater tied up for at least three minutes. This way, once the two have re-established contact, they won't even remember what they were talking about.

Step Thirteen: You hear someone on the repeater giving directions to a visiting amateur. Even if the directions are good, make sure you break in with your own "alternate route but better way to get there" version. This is most effective with several other "would-be LIDs", each giving a different route. By the time the visiting amateur unscrambles all the street names whizzing by in his mind, he should have moved out of the range of the repeater. This keeps you from having to stick around to help the guy get back out of town, later.

Step Fourteen: If an annoying station is bothering you, make sure your other "LID" buddies have a "coded" frequency list. Even though "CODES" are strictly forbidden on Amateur Radio, it's really neat to practice "James Bond" tactics.

Step Fifteen: Always use the National Calling Frequency for general conversations. The more uninteresting, the longer you should use it. Extra points are awarded if you have recently move from an adjacent frequency for no reason. Make sure when DX is "rolling" in on 52.525 that you hang out there and talk to your friends five miles down the road about the good old CB days!

Step Sixteen: Make sure that if you have a personal problem with someone, you should voice your opinion in a public forum, especially a net. Make sure you give their name, call, and any other identifying remarks. For maximum points, make sure the person in question is not on the repeater,

or not available.

Step Seventeen: Make sure you say the first few words of each transmission twice, especially if it is the same thing each time. Like "roger, roger" or "fine business, fine business". I cannot stress enough about encouraging redundancy.

Step Eighteen: If you hear a conversation on a local repeater, break in and ask how each station is receiving you. Of course they will only see the signal of the repeater you are using, but it's that magic moment when you can find a fellow "LID", and get the report. Extra points are awarded if you are using a base station, and the repeater is less than twenty-five air miles from you.

Step Nineteen: Use the repeater for an hour or two at a time, preventing others from using it. Better yet, do it on a daily basis. Your quest is to make people so sick of hearing your voice every time they turn on their radio, they'll move to another frequency. This way you'll lighten the load on the repeater, leaving even more time for you to talk on it.

Step Twenty: See just how much flutter you can generate by operating at handheld power levels too far away from the repeater. Engage people in conversations when you know they wont be able to copy half of what your saying. Even when they say your uncopyable, continue to string them along by making further transmissions. See just how frustrated you can make the other amateur before he finally signs off in disgust.

Step Twenty One: Use lots of radio jargon. After all, it makes you feel important using words ordinary people don't say. Who cares if it makes you sound like you just fell off Channel 19 on the citizen's Band? Use phrases such as "Roger on that", "10-4", "I'm on the side", "Your making the trip" and "Negatory on that".

Step Twenty Two: Use excessive microphone gain. See just how loud you can make your audio. Make sure the audio gain is so high that other amateurs can hear any bugs crawling on your floor. If mobile, make sure the wind noise is loud enough that others have to strain to pick your words out from all the racket.

Step Twenty Three: Start every transmission with the word "Roger" or "QSL". Sure, you don't need to acknowledge that you received the other transmission in full. After all, you would simply ask for a repeat if you missed something. But consider it your gift to the other amateur to give him solace every few seconds that his transmissions are being received.

Step Twenty Four: When looking for a contact on a repeater, always say your "listening" or "monitoring" multiple times. I've always found that at least a half dozen times or so is good. Repeating your multiple "listening" ID's every 10 to 15 seconds is even better. Those people who didn't want to talk to you will eventually call you, hoping you'll go away after you have finally made a contact.

Step Twenty Five: Always use a repeater, even if you can work the other station easily on simplex ... especially if you can make the contact on simplex. The coverage of the repeater you use should be inversely proportional to your distance from the other station.

Step Twenty Six: When on repeaters using courtesy tones, you should always say "over". Courtesy tones are designed to let everyone know when you have unkeyed but don't let that stop you. Say "over", "back to you" or "go ahead". It serves no useful purpose but don't worry, it's still fun!

Step Twenty Seven: Use the repeater's autopatch for frivolous routine calls... especially during morning or evening commute times. While pulling into the neighborhood, call home to let them know you'll be there in two minutes.... or, call your spouse to complain about the bad day you had at work. After all, the club has "measured rate" service on their phone line so they get charged for each autopatch call. Your endeavor is to make so many patches in a year that you cost the club at least $20 in phone bills. That way you'll feel you got your money's worth for your dues!

Step Twenty Eight: Never say "My name is ....." It makes you sound human. If at all possible, use one of the following phrases: a) "The personal here is ..." b) "The handle here is..."

Step Twenty Nine: Use "73" and "88" incorrectly. Both are already considered plural, but add a "s" to the end anyway. Say "73's" or "88's". Who cares if it means "best regards" and "love and kisses." Better yet, say "seventy thirds"! (By the way, seventy thirds equals about 23.3).

Step Thirty: If the repeater is off the air for service, complain about the fact that it was off the air as soon as it's turned back on. Act as though your entire day has been ruined because the repeater wasn't available when you wanted to use it. Even thought you have never paid a penny to help out with the upkeep of it.

Greetings Mr Code;
Perfect Post,Sir.
Your knowledge,as well as your logic, is superior.
Thank you,
an honest ham

Oh Brother!
Reality check time: Why don't YOU read a bit about Medicare D?
Aging baby boomers are about to be screwed in ways they couldn't even
imagine.

Insurance companies entirely control Congressional debate and actually
write the rules. Most of Congress doesn't even READ what they're
signing on to.

O'Reilly, is that you?

The clears still exist, but the former 1-A's are protected to only 750
miles, and the B's are protected even less. But they exist. However, most of
them do not pay any attention to out of market listening, as there is no
longer any revenue from it.

From: weatherall <weatherall.2b2l3j@news.radiobanter.com>
Message-ID: <weatherall.2b2l3j@news.radiobanter.com>
Source record: 83693

Voice of Croatia received on 17 July 2006 during 0200-0225 UTC (primetimeshortwave says the broadcast is only from 0200-0215 UTC). On 9925 khz although I tuned to 9923 khz due to some form of interference. Five-minute news bulletin followed by several songs. Received with a Sangean ATS-505.

Does anyone have a recording of this broadcast, or can you identify any of the songs played? I will also email the station for a tracklist.

How often does the Voice of Croatia go over time?

You may want to get some help with this anger problem you, and many of us in this group seem to have and hold on to, until the given moment when there's an opportunity to vent. My experience has shown me that when I start expressing myself like that, there's usually a problem within myself. In my case, it was worth the investigation. But if that's not the case with you, great! It's probably every body else that's wrong.

2573. HD {IBOC} Radio - Time And A New Generation Are On It's Side

Newsgroup: rec.radio.shortwave
Date: 2006-07-17 06:50:18 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1153119018.430728.69340@i42g2000cwa.googlegroups.com>
Source record: 83610

DaviD,

FM Stereo with a plain old AM Radio in a single Box
caused many a Consumer to 'buy-new' and replace
a good AM Radio or AM/FM Radio with a AM and
FM Stereo Radio. It took years but people did make
the change as a Generation of New Radio Listeners
wanted the Better Sound of FM Stereo.
- - - And "Today" FM Stereo is the most acceptable
and common form of FM Radio Broadcasting.

At least with respect to FM IBOC Radio the 'product'
will offer a newer and better Listening Experiance for
the "Next" Generation of FM Radio Listeners.

This "Next" Generation of FM Radio Listeners will be
making the decission to buy a New "HD" {IBOC} Radio.

The Marketplace will decide "IF" :

1 - That New "HD" {IBOC} Radio is only an FM "HD"
{IBOC} Radio with a plain old {Analog} AM Radio in
a single Box -or-

2 - That New "HD" {IBOC} Radio is both an FM "HD"
{IBOC} Radio along with an AM "HD" {IBOC} Radio
in a single Box.

THE BIG OOPS !
The single draw back of AM and FM Radio IBOC is that
for now it is a US "Only" Broadcasting System and any
Radios built for it will have a limited market potential.
but, But. BUT ! - Should other Nations get on the AM
and FM "HD" IBOC Broadcasting Band Wagon it will
become a World Wide Broadcasting Standard.

THE POLITICAL PLUS {MINUS}
Many Nations where Broadcasting is restricted and
Radio Listening choices are limited by the Government
will find IBOC to their liking. The Digital Side-Band Hash
will make the "Local" Government Controlled Radio
Station the only listenable Radio News and Information
Source and all those pesky distant foreign radio stations
will be down in the Hash. Big Brother Loves IBOC :o)

David - You and DE - Can tell right now . . .
But in Time "The Marketplace" will decide the Fate and

the Future of "HD" {IBOC} Radio :
* FM Only ? -or-
* AM and FM IBOC Together ?

hd radio - time and a new generation are on it's side ~ RHF
.
.
. .

> > DE - Wake-Up ! There Are NO Clear Channels ! - any more . . .
> > -and- IBOC will put an End to All the Regional AM'ers Too ~ RHF
>

- The clears still exist, but the former 1-A's are protected to only
- 750 miles, and the B's are protected even less. But they exist.
- However, most of them do not pay any attention to out of market
- listening, as there is no longer any revenue from it.

DE - Yes and "HD" {IBOC} AM Medium Wave Broadcasting
will effectively do away with them all [.]
- - - Why Waste the Extra Broadcast Power ? ? ?
-IF- No One Can Hear You and Understand You -or-
Even knows that you are There ? ? ?

The Digital Side Bands from AM "HD" {IBOC} will create
a "Dead Zone" some where between 75 to 150 Miles :
Where the Magnitude of : #1 the Local Hash; #2 the
Regional Hash; and #3 the Nation Wide Hash : Will all
render any and all Distant AM Radio Signals as another
Audio Fragment in-the-background-noise.
- - - the noise, The Noise. THE NOISE !

'hd' iboc and the creation of the am radio dead zone ~ RHF

Are you sure that Sirius doesn't require a subscription? I'm pretty
sure that it does, in which case their schedules are irrelevant.

Sorry, but all HD radios are required to be AM and FM.

Most of the rest of the world has already chosen Eureka 147 and/or
DRM.

Why spen $200 for a radio that has a few extra channels when you can
get a satellite radio with 150 channels for half the price?

I haven't checked lately,but I could (maybe still can,at night time)
pick up a music radio station in Monterey,Mexico on my radio right here
in Jackson on the AM band.I have been to Monterey,Mexico before.I still
have a Monterey,Mexico newspaper here from when I bought a hamburger and
coke at a MacDonalds restaurant in Monterey,Mexico in 1992.

This is not an issue of good will. Radio listeners use less and less stations from outside their local areas, and are using less and less AM radio in general.

Very, very few stations have developed any revenue from such listening. For example. farm radio used to be a huge revenue source in early AM hours and during the daytime in agricultural states. Now, farmers get data on PCs at home, and get commodity reports via text on cellular phones, so there is very little agribuisiness advertising any more. Things change, and radio adapts... just like when TV ramped up. The reality is that revenue is based on the ratings and efforts in the local, groundwave market today and that distant listening is not significant.

Since the 2.0 design spec radios are 60 days from getting to market at the least, how do you know?

My first VHS cost $800. My first DVD player was $400, and my first CD player was $1,400. Within a few years, they were mass market priced. Look at LCD and Plasma TVs, or high def TVs.

No, it has not. I have not checked, but I do not think any country has
chosed DRM.

Brazil has chosen HD, as has Philippines. Colombia, Mexico and Central
America are apparently going with HD.
>

Satellite requires a $150 a year subscription, while HD is free. And the
receivers will be under $100 fairly soon... probably within a year to 18
months, just like other roll outs.

LA now has 10 additional HD channels running, with another 15 coming... at
least. Add that to 87 other free signals, most of which will be in HD also.

AM stereo was analog, and 5 years too late. FM had lost nearly all music listening when it came out, and there was no interest in marketing it. Today, HD is going to get $200 million in marketing just in the top 10 markets.

> 1 - That New "HD" {IBOC} Radio is only an FM "HD"

Brazil is building several dozen HD stations. Philippines is on board, and Mexico is doing testing (since they have narrower separation for same market stations). Colombia and Central America will allow it with no rules. Together, these countries have a greatedr population than the USA.

Since they have very little listening a) at night and b) outside the
groundwave coverage, it appears they will sacrifice this tiny audience for
the chance to keep AM radio relevant.

> - - - Why Waste the Extra Broadcast Power ? ? ?

50 kw is basically useful to overcome noise levels in big markets. It is
necessay to have 50 kw to even try to cover the Los Angeles or NY or Chicago
metro areas daytime with a listenable signal.

My point was that in less than 5 years, we've gone from discussing
the strength of broadcasting's future, to the probabilities of AM
radio's demise. That things have changed dramatically, and they've
coincided with the rise in practical alternative outlets for content.
Making a move that trashes the bands for the sake of attracting new
listeners to limitedly available technology can't be smart.

I think that age is one component, to be sure. But I think there IS a
technology component as well. If AM audio quality is really an issue,
then there the on going touting of alternative outlets, all touting
higher quality have to take a toll. And although the listener share
erosion to alternative outlets may be small, the revenue share loss will
be significant, especially in the cases of established, heritage
operations, with high staffing costs and corporate numbers to hit. An
upstart with zero budget can push an established heritage station into
dramatic changes with a small listener share erosion based entirely on
lost revenue. In an environment where every nickel is counted by a
corporate home office, a shortfall in revenue, no matter how small, can
have significant impact in how the operation is run. That can have
morale impact. And morale troubles at a radio station have a broad
footprint across a radio stations landscape. None of it good.

All of which can impact survivability. Aging with an audience is one item. And in many cases, it's a big one. But that's a station specific issue. A station that fails can be replaced by more a format of more desirable demographic nature. As you point out, in some big markets, hispanic listening is holding its own, or showing growth in AM listening. That being the case, erosion will be largely resulting from issues of technology: alternative outlets, audio quality, etc.

In that light, trashing the bands in hopes of bringing new listeners to the successful stations through HD audio, makes little sense. Because there are still going to be better sounding alternatives available, that are, in practical terms, more readily and conveniently available. While AM-HD is still not widely distributed. Although the HD rash, is.

Nearly everyone with a disposable income carries a cell phone. And streaming, while still expensive on a cell phone, is becoming commonly available, at lower cost. If you're already paying for something that provides the same benefits of a new technology without requiring that new technology's format specific hardware, are you really going to make the move? Spend the money? Some will, sure. That's what they do. Innovators and early adopters will move to something new BECAUSE it's something new. But they don't stay for very long. But whether the bulk of the public will make a move to HD is a significant gamble. And as the rise in alternatives continue, there will be erosion in the number of AM listeners who find a need to make the move to HD, or remain on the analog AM broadcast channel.

AM stereo was a perfect example of a solution for which there was an eroding problem. A delay was fatal. But the inevitability of the success of AM stereo is far from a foregone conclusion.

DAT was another. A digital solution for high quality recordists, that was shot in the face by the record industry. And while they wrangled out solutions to their concerns, some stunningly boneheaded alternatives that actually made it onto the ratification table, rose alternative solutions that made DAT virtually obsolete before the first approved decks made it to retail.

Both examples were good ideas which were delayed by legal wrangling, as alternatives were introduced. And both suffered from some very bad press about technological implementation that put off sales of hardware. AM stereo was eagerly awaited. Widely written about. And in every article the issue of format compatibility with receivers came to fore. Four different standards implied more than one receiver was required, even though that was never the case. But the public was not up to the long, detailed and often unclear explanations that would have made AM stereo a simple implementation. One station in town broadcasting C-Quam, two broadcast Kahn, one Harris....one receiver would decode them all, but the operator would have to select which format. I had a single multimode receiver and enjoyed AM stereo wherever I encountered it. But I'm a geek. I"m not in the mainstream. Most users didn't understand why the confusing choices. And were disappointed by the results they got as a result. Mainstream users simply waited until things were easier to

understand, or there was something simpler available. AM stereo died from the delay in implementation, the confusing number of stories about it, and bad initial experiences.

Despite successful side by side tests, with huge approval ratings for AM stereo, it was dead on arrival, by the time it was implemented in earnest.

Similarly, DAT was hotly anticipated, and discussions about it were ubiquitous. Then came the record industries objections. And numerous copyguard schemes, including that stunningly stupid audio filter idea, that would have taken DAT from flat response to +0, -60, 20-20K. No audiophile would touch that. And objections from the audio community were equally as vocal as those of the record industry. And while DAT was sitting on the docks waiting to be approved for retail, along came Mini Disc. DCC, and eventually, practical CD-R. Not quite the quality in some cases, but devoid of the bickering, noise and confusing array of hype and explanation that DAT enjoyed. When DAT was finally released to retail, it was virtually dead on arrival.

AM-HD has also enjoyed some notoriety of its own. Long discussed, much written about. And then came the tests. All played out in the public's face. With interference audible wherever it was deployed. That the practical uses to the industry, and the listening public, of that trashed spectra, are limited is not really relevant. Much of the public doesn't understand that. Anymore than they really understand that the noise, in the digital mode, would be gone.

Tests of AM-HD have been met with huge approval numbers. Like DAT. Like AM stereo. Whether the confusing buzz, in the press, and on the public's radios will have the impact of AM stereo, or DAT, has yet to be deterimined. But I'm not confident that AM-HD hasn't already swallowed its own hemlock.

The digital buzz word is all important in marketing today. Especially in electronics. But how it actually works, is not widely understood, to the degree that there is an entire segment of Marketing that sells gimmicks for digital devices, by using simpler to understand analog sales pitches. CD Rings, green markers, and host of filter devices have been sold by the millions under the premise that these devices actually clean up the audio of a compact disc by changing the SHAPE of the bits in the stream. Analog thinking applied to digital technology. Targetted at the great digitally unwashed. Which does nothing to actually improve understanding.

AM-HD tests, are like HD-TV tests. Laboratory grade installations, tweaked for optimum performance, to create a sharp contrast between the old and the new, with the best possible light placed on the new.

But listening isn't done in the laboratory, and stations implementing AM-HD, by your own accounts, are up to engineers with somewhat less than sterling engineering skills or standards of expectations. AM-HD that

I've heard has been poor. Even by comparison to AM analog. And while I realize that early tests are often no indicators of downstream performance, what I've heard has made a poor impression of some persistence. Much as a colleague's early experience with Sirius satellite radio put him off satellite radio. Possibly forever.

The point to all this being, that unless the system is implemented well, with clearly defined benefits, without glitches commonly encountered in beta testing, the public's response is likely to be lukewarm, at best. HD-implementation right now, is a large public beta test. With all the glitches on display. And the artifacts of digital broadcasting on bands with few available analog receivers are on display as well.

This does not create mainstream confidence in the new technology. And that may spell an uncertain future.

At the same time, there are other, equally digital, and more readily accessible outlets coming on stream, that do not carry the confusing array of often conflicting commentary with them.

I agree with you. AM-HD may be too little too late. Maybe not. But it's done something that other new technology hasn't done before it. AM-HD has put its warts on display before it's benefits. AM stereo did not. DAT did not. Satellite Radio did not.

And that, with the rise of other newer technology, other newer, and less confusingly discussed alternatives, may have cast die that will result in one of the great losses in a once noble profession.

> viable money machine, and sustained mostly by sports play by play. It's not
> the technology, it is the fact that it has no salable listener base.

I agree with you that the listener base is aging at WGN. But this is true of many AM stations. Then again, there are stations that ARE attracting younger, more salable demos. You work with a number of them. If the real purpose of AM-HD is to stem the erosion of AM listening, it's of marginal benefit to those stations attracting younger demos. They're already attracting new users through content alone. The benefit of AM-HD would then be greater for an older station like WGN, than it would your AM in LA. But the content would still not be attractive to the salable demos. The techological solution of AM-HD would then have marginal impact on the overall survivability of AM radio under the best of circumstances.

Because, especially in the case of a WGN, where the listeners are more accepting of the AM audio, the HD rash would be more offensive. And with WGN also streaming, alternatives are available. Trashing the bands in search of new listeners to newer technology would seem shortsighted.

> from the listeners to CCU's Spanish and Hispanic tageted stations.

As I said, there are conflicting results to the new programs. But that's less important than the fact that units are down to a new low. That means to keep revenues up, there must be more non traditional sales. Some of it off-air, much of it not. But as revenue tightens, the focus of some operational items change. And content gets targeted.

>

Mancow is anomalous, in that he was commanding mid 7 figures to produce low ratings. Had he been a networked property, and carried by Q 101 for a syndication fee, he would have been more profitable. Though even as a networked commodity, he wasn't exactly setting the industry on fire.

Rush is a much better example. But a lot of what makes Radio important is local content. Rush, and networked radio does little to provide that. Nor does the increasing tendency to cut costs by eliminating local content due to declining revenues. And it's content, even over audio quality, that attracts and holds listeners.

Consolidation has give us more viable stations, but less service.

AM-HD will not change that.

>> Yes, most stations were not profitable before consolidation. I got

>
> See the above. The Cleaar Channel debt to equity ratio is better than that
> of General Electric!

While that may be true, the magnitude of debt to equity, when
revenues are off is less important than absolute magnitude of debt. Any
debt eats into the bottom line no mattter how good the ratio is, and
when revenues are off, something has to be cut, to hit the target
numbers in order to keep investors comfortable. In the end, that's
usually in content. Content is what attracts listeners.

AM-HD will not change that.

I believed you just made my point for me. Lackluster performance on
the street is a money issue. Flat revenues are the moral equivalent of
decline when expectations are for growth. The company is taking in less
money than it needs to continue making it's target. And if Chicago and
NY are off, while LA is in growth, the stations in Chicago and NY are
still in decline. And cuts are made based on decline.

If you're just looking at the balance sheet at BlackRock, you're
right. Revenues are flat. If you're looking at the amount of money taken
in at Chicago and NY, it's off. The cuts are related to declining
revenues, where revenues are declining. The cuts were made due to
declining revenue.

Exactly my point. Money issues have eclipsed content issues in
broadcasting, and in the case of Disney, content throughout the company.
Investors are more important than listeners, viewers, or people who are
not tall enough to ride this ride.

AM-HD will not change that, either.

>> Now, we're trying to do the same thing with IBOC/HD, and in the

And that's my point, exactly....investment in programming. Content.
What comes through the grille cloth. AM-HD, while a nice enhancement to
the listening experience for those so equipped, it's not what attracts
new listeners: Content. At the same time it's making the programming
content of AM difficult to enjoy for stations being interfered with.
Even, as in my case, local stations which should be protected from HD rash.

If you're talking about the survivability of AM radio, AM-HD is not
only too little, too late, but it creates the very circumstance for
which it is purported to be the solution: noise and interference. All
the while without ready availability of hardware to implement the solution.

For its expense and liabilities, AM-HD would seem to be a waste of
funds that could be better invested in programming, the model that works.

There's a world of difference between technical electronics knowledge
and ability to decipher code. One has absolutely nothing to do with the
other. FWIW, I don't even have a ham license anymore. I don't care
about the code, whether it lives or dies. If you enjoy brass pounding,
then do it.

Just don't equate that ability with another that is not even slightly
related.

The trouble with DAT was that it didn't really sound any better than
VHS HiFi which cost a fraction as much. MiniDisc at least offered
some economy and portability.

Stations are licensed to serve the local community, starting witht he city of license. In the past, like the 60's and 70's, a licensee had to do ascertainment of community needs every 3 years for license renewal. That meant talking to community leaders... stations generally talked to such leaders in a small area around the city of license and the surrounding towns and communities.

The FCC has always emphasized local service... the reason the clears were not granted 500 to 750 kw as they lobbied for from the 40's through about 1968 was that the FCC wanted to encourage more local stations, not regional or national ones.

I guess only morons want to keep up to date on news. On satellite, I have a
choice of news from about 12 different countries, plus the US. If I buy a
newspaper, I only get one local voice. And the web is less than a perfect
source, too, due to bandwidth issues on video.

> I have never paid more than $100 for a CD player. $1,400 is insane.

If you were doing Beautiful Music syndication in the early 80's and found
that a lot of your best cuts were available on CD from Japan (at $35 to $40
each!) you rushed out to get that CD player.

DAT was far better than the MiniDisk (which is actually the standard storage
in much of the Third World in radio), but it is very unreliable. One
engineer said, "A DAT machine is a midget VHS with an attitude."

The reason DAT had a passing popularity was its portability. For radio ENG,
it was the standard for a while. Darned things kept breaking, though.

2645. OT: 0-Day Denial of Service Attack

Newsgroup: rec.radio.shortwave
Date: 2006-07-17 18:21:18 UTC
From: delorean@nim.bstrs
Message-ID: <90389BG.71200760@nim.bstrs>
Source record: 83731

Hackers have allegedly discovered how to take over a peer-to-peer file sharing network and use it to mount a denial of service attack against anyone. Since tens of thousands of machines are on a P2P network at any given moment, the attack can be used to bring any web site to its knees, and the attack can be kept up indefinitely.

No one is sure how it works, but the attack obviously involves "lying" to the P2P network in such a way that the machines which are attached to it go to the targeted IP address and attempt to connect to the victim machine. The large volume of connection attempts quickly swamps the bandwidth of the connection and renders the victim machine invisible to other Internet users.

Apparently, a significant number of what were thought to be bot or zombie attacks was instead the result of misdirecting one or more P2P networks like eDonkey or Bittorrent. Peer-to-peer networking has now become a potential Internet weapon under the control of a few elite hackers, and not one security expert has yet to discuss it.

Truly, if the whispers are correct, an awesome zero-day exploit is currently in use as a net weapon, and it needs to be exposed.

Anyone heard about this exploit?

That's convienient. Today's IBOC delay is tomorrow's FCC mandated indecency delay.

By the way, are listeners also complaining about interference from such sources as TVs and computers?

WADO-1280 actually turned off its IBOC a few weeks ago. It hasn't gone back on.

Supposedly they received interference complaints from other stations in that part of the dial.

We used to get these.

TV complaints were decades ago. Pretty much everyone learned a TV and a radio can not sit together and play nice.

Computer stuff started generating calls in the late 80's as offices got computerized fully, and from homes inthe early 90's. Not a lot of them, but certainly enough to know people were noticing. Again, I think folks understand that now.

Maybe back on this afternoon. No complaints.

2663. Looking for Eimac tube data sheets

Newsgroup: rec.radio.shortwave
Date: 2006-07-17 20:56:22 UTC
From: "Dave (from the UK)" <see-my-signature@southminster-branch-line.org.uk>
Message-ID: <44bbf977@212.67.96.135>
Source record: 83799
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,uk.radio.amateur

I'd like to expand the collection of tube data sheets (mainly Eimac) at

http://www.g8wrb.org/

which has many tubes used by hams (and some which are a bit too big),
like the

I would appreciate either paper copies (or better still electronic
scans) of those I don't have.

Data sheets are several pages long (typically 5~10). I do *not* want the
1 page summaries that are on the Eimac web site.

http://www.cpii.com/eimac/catindex.htm

or are reproduced in Eimac catalogues.

If you have a data sheet, you can upload the files (gif, jpeg, pdf etc) at:

http://www.althorne.org/php/

(then check they exist at http://www.althorne.org/up/ although
permissions will prevent you reading them until I have reset them)

I'll then move them to http://www.g8wrb.org/ later.

The following page has a list of the missing / incomplete data sheets.

http://www.g8wrb.org/help.php

That list is automatically generated once/day and gets updated as new
data arrives.

I'll reproduce that list here for completeness. I particularly want the
Eimac Y799, Eimac Y808 and EEV CV6131, as either myself or someone else
has an immediate need for them.

Here is the WANTED list!!!

Newsgroup: rec.radio.shortwave
Date: 2006-07-17 20:59:58 UTC
From: David Eduardo <amdavid@pacbell.com>
Message-ID: <iTSug.131833$dW3.8832@newssvr21.news.prodigy.com>
Source record: 83800

Commentary: IBOC Naysayers Fear Change
Educator Says It's Time for Radio to Leave the Warm Glow of the 12AV6

by Edward Montgomery

After reading letters to the editor and excerpts of publicly-filed comments from individuals opposed to the switch to IBOC, Ed Montgomery, an electronics and communications teacher for 34 years, prepared this opinion which he says refers "to another time when a broadcast signal was changed to provide better service even though it introduced what was considered a 'penalty.'"

Human beings generally cling to the status quo. When something new comes along, trepidation often results.

When Thomas Edison developed electricity, the gaslight companies proclaimed the dangers of the new form of energy. "Get a horse!" was the cry for many at the turn of the 19th to the 20th centuries, when the automobile came on the scene.

My father would never buy a car with a radio or an automatic transmission. His standard response to the latter was, "The transmissions break."

He was a firm believer that car radios didn't work outside a specific area. We lived in northern New Jersey. He believed that if you got to Greenwood Lake, which borders New York, the radio would cease to operate. This was empirical evidence he acquired from using a company car with a radio.

What he never understood was that WAAT(AM) - now WWDJ - was a five-kilowatter that couldn't send a signal that distance. It was the only station to which he listened.

Radio purists

But a lot of people like that act out of ignorance. Others use intentional deception to protect their products. The company with the slogan "the most trusted name in electronics" did all it could to suppress the development of FM broadcasting.

And among those who were there, who can forget Hollywood executives in the early 1950s writing off television, saying the average person would never exchange a giant theater screen for a small flickering box in their homes?

That battle created two classes of performers, writers, producers and directors: The elite Hollywood professionals, and the "underlings" in television, mostly based in New York City.

We live in an age of another group of purists who seem to believe that true radio broadcasting should consist of Heising Modulation at the transmitter and five tube superheterodyne receivers. These electronic Luddites fear any change to radio while EMI noise, iPods, Webcasting, satellite radio and those custom mix music CDs take more of the listening audience away each day.

Diversity of program distribution is taking listeners from the traditional broadcaster. Listeners are leaving and they are not likely to return, and this is affecting FM as well as AM.

It's time to leave the warm glow of the 12AV6.

Listening habits have changed over the years. Two-income families have pretty much eliminated the DJ format with family-oriented humor between every song integrating their banter into the commercial clusters. Talk radio has gathered the political and sports demographics and the narrow rotation of some forms of music.

With just a few conglomerates owning most of the stations, the formats are very similar. A decade ago more nighttime radio stations were added to the old clear channel frequencies, adding more noise, limiting their effectiveness at great distances.

The primary service is the area that needs signal free from most noise with a good-fidelity stereo signal, at a minimum. The IBOC system can deliver that. Yes, it does inject noise in the first-adjacent sidebands in that primary zone; but few people have a need to listen to a station a time zone away any more.

Sixty years ago I would not have favored this change. But back then, living in a more rural America, we had broad-banded AM receivers and a need to hear Fred Allen, Eddie Cantor or the latest news from the war. That's no longer the case.

The best way to describe what is happening is that the radio signals will change. Within the limits of keeping most of the analog signal, it is a small price to pay to reduce noise, improve fidelity and add more services.

'Stereo penalty'

This is not the first time radio signals have changed.

When Edwin Armstrong developed wide-band FM he established 100 percent modulation as a frequency deviation of +/- 75 kHz producing the best signal-to-noise ratio. When subcarriers were added, the main channel modulation had to be reduced to accommodate them.

With FM stereo, sum and difference channels of equal loudness were transmitted, severely reducing the main channel deviation. The result was the "stereo penalty," adding noise, often resulting in moving transmitters to better locations and increasing power. Even that didn't always do the job, especially for the Class A stations.

The low receiver sensitivity of that era contributed to a reduced coverage area. The difference then was that there were far fewer FM listeners then than there are AM listeners today. I know of no complaints surrounding the addition of the stereo signal. Most say it saved the band.

There is another way to solve the digital broadcasting dilemma: Follow the path Armstrong did - developing an entirely new form of broadcasting, promoting it himself, fending off those who wanted him to fail. He gathered a significant number of listeners along The Yankee Network.

The battle with RCA was too much, costing his life; but his wife prevailed. There were no conglomerate owners back then, and a little more interest by local broadcasters to experiment.

Few have the willingness to do that today.

Montgomery is laboratory director for video technology and communications at the Thomas Jefferson High School for Science and Technology in Fairfax, Va.

Really. As I recall the Columbia had 5 analog computers that had to
vote on every command and the things were always needing cold reboots
to get synchronized.

I suspect the military drives way more technical innovation than
putting American dicks in space.

What he is saying here is the content comes from the networks, implying
there is no need to listen to a distant station since it will be more
of the same. This just isn't true.

>

Again, this isn't true. IBOC is inferior to a good AM signal. What is
worse, it forces the AM signal to be bandlimited to 5KHz. So you ruin
the analog signal and deliver low bit rate crappy digital audio.

What is true is the digital signal spreads hash on the adjacent analog
channel, but they aren't in the next time zone.

>

More services? Well, is that what you call a computer playing classic
rock? Reduce noise? IBOC creates noise. Improved fidelity?? Well, if
you don't count digital artifacts.

All true, but none of these "improvements" put hash on the adjacent
channel.

In the bay area, KFOG has to own two stations to deliver decent stereo.

Create a new band for digital radio and I won't complain, though it
better be a high bit rate if you expect me to buy one. Further, we

could have AM stereo right now if the market wanted it. The technology was delivered, but it never caught on as FM had both stereo, more bandwidth, and less noise.

< Snip gratuitous BS >

An ignorant opinion coming from anyone and completely inexcusable
opinion coming from an educator.

> Radio purists
> But a lot of people like that act out of ignorance.

< Snip even more blatant and non-relevant BS >

The issue is about:
1. Money invested in receiving equipment.
2. Going to a more complex transmission scheme.
3. Control over who can listen.
4. Using a proprietary scheme over one in the public domain.
5. Only somewhat compatible with existing spectrum usage.
6. The change is advantageous for the broadcasters in reducing costs and
possibly creating additional revenue where the listener just gets
additional costs. A deal for the listener...not.

What a blow hard idiotic opinion.

DE,

All this is good to the extent that there will be a greater market for the HD Radios and thus a higher production volume and a lower per unit production cost.

-IF- Within 5-10 Years the EU and China migrate to HD {IBOC} Radio then it will become an effective world standard.

No, but I think the HD-2 channels will produce revenue. At The Conclave
yesterday, the belief was expressed that those channels would produce $800
million in additional revenue by 2008.

Say what?

How is Bittorrent "Microsoft centric?" It operates under all OSes
that I know about and has nothing to do with Redmond.

And if it's old news (which I doubt), the hackers in the hacking news
groups haven't bothered to mention it when discussing it over there.

Citations to back up your assertions please?

It's best to bomb sand niggers on their own turf. Don't let them cross the border and enter your country. Bill Clinton let some in here and we had 911 happen. You need to take care of Iran and Syria for good this time, because their long range plans have always been to get rid of you. Do whatever it takes. American supports you. :-)

ROFL, Sorry. I'm starting to believe laughing at him just encourages him
to make more typo's. We need to stop laughing and pity him instead.

Maybe if he had to learn CW the mental process would help his spelling.

Getting rid of CW is like choosing the kind of film.

Ham radio is drowning and the anti-code hams want us to think tossing it
bricks will make it float better. Dumbing things down is never an
improvement.

Come on now. Look at all the stuff you had the money to buy at the
Goodwill store because of the tax cuts he give you. Of course you have to
have a job for the tax cuts to be a benefit. You can't just sit around
the house all day in a bra and dress typing on webtv.

Considering that someone with absolutely no knowledge of electronics
can memorize enough to pass the test in about 8 hours, there's no
longer any real test of anything but the ability to memorize.

>FWIW, I don't even have a ham license anymore.

Then, as the courts would say, you have no standing in the matter.

nope he has full standing he is an american that means the FCC is
suposed serve not the ARS but the people of the USA.

the problem with you procoders is that you think the ARS owns the
bandwidth not the poeple of the USA

When did I notice an absence of IBOC? I'd say about two or three weeks
ago, don't exactly remember when, since I'm not a regular WADO 1280
listener anymore (haven't been for many years since the early 1990s).

> Maybe back on this afternoon. No complaints.

I must stress that the interference complaints are not from me. They
were what another engineer from the New York market told me. I was
just passing the word along.

Whoever can set the record straight has my blessings and eternal
gratitude as always (not that it's worth much ;))

The Morse code exam is a test of the ability to memorize.
No knowledge of electronics required.

It realtes to DX as HD uses specturm. It also shows that there is a lot of
sentiment for it in radio, and it is unlikely it will go away. There was
noting like this support for AM stereo...

I'm sure you will win loads of points from the DXers in the area for
reporting this. There appears to have been an interface issue where local
metering said it was on when it was not. we are fixing it. The QRM (ok, so I
am not as funny as Jay Leno) will be back very shortly.
>
>> Maybe back on this afternoon. No complaints.
>

Thanks. Neither our DoE nor the local staff have any indication of there
being any complaints.
>
> Whoever can set the record straight has my blessings and eternal
> gratitude as always (not that it's worth much ;))

depending on what is wrong, it should be back pretty quick unless something
major is DOA. We do not have redundancy in HD gear, as the gear is so
immature nobody is backing it up till the system is as robust as analog gear
is.

All of this is nonsense. If God had meant us to listen to radio or
watch television, he'd have given us built-in antennas.

MY entertainment is watching members of my tribe doing the rain dances
and the fertility dances.

No tubes, transistors, or IBOC necessary!

So there!

Joe

If anyone really wants to use Morse Code, can't they still ? To me it's like requiring a sixteen year old to learn French <s>, or requiring the metric system be used exclusively. If someone said you had to only read with your left eye, or eat only potatoes on Tuesday, would that be a bad thing <s> ? If you really have to use Morse Code, or you really enjoy using morse code, then by all means do so, but why burden someone else with it if they only really want to talk to someone with their voice ? Or perhaps we should mandate that only vacuum tubes be used in amplifiers, or only ether be used for anesthesia in hospitals. I feel like we have too many people dictating to others. Soon we will only have digital tv to watch, another dictate. When it is all said and done, the world is not going to end if amateur radio dies, any more than if morse code disappears, vacuum tubes disappear, or television disappears replaced by mental telepathy.

Not capable of producing a single coherent sentence. Not capable of
learning 26 letter and 10 digits. And thinking gives you a headache.

Only conclusion is that you don't have enough practice, so stop
thinking entirely before you cause permanent damage.

In 1953, as a sophomore in high school, I didn't know any
electronics and was therefore forced to memorize the ARRL
License Manual in order to get my Conditional license.
People like me have been memorizing License Manuals for
more than half a century.

Rules and regulations are just an exercise in memorization also. They require no knowledge of electronics either.

The CW text requirement is like the requirement for a foreign language requirement for some college degrees, it rounds out the amateur skills.

> You're just a garden variety troll...with a very poor understanding of
> both radio and marketing.

Huh? There are over 1000 HD stations on the ari, and commitments for more
than a thousand more.

Considering that only about 20% to 25% of AMs licensed are viable (cover
thier market, are not daytimers, do not have radically limited night
patterns, etc), nearly every one will be HD in about 24 to 36 months.

On FM, most viable top 100 market stations will be HD in a couple of years.
There are already over 100 HD-2 formats running.

I have a pretty good understanding of radio, and the credentials and C. V.
to back that statement. Who are you to say I do not?

It is not "my" technology but I definitely support any effort to extend the
life of free terrestrial radio.

P.S. There was no digital broadcast technology 20 years ago. we were barely
getting CDs to a price point where anyone could afford them.

2775. Winradio g313e and Flex-Radio SDR-1000 Compared

Newsgroup: rec.radio.shortwave
Date: 2006-07-18 05:06:42 UTC

Message-ID: <hoadncYtolwc8SHZnZ2dnUVZ_s6dnZ2d@comcast.com>
Source record: 83962

Readers of rec.radio.shortwave may be interested to check out my lastest posting on my SDR-1000 blog. I had the opportunity last week to do a "hands-on" comparison between a Winradio g313e receiver and my Flex-Radio SDR-1000. My friend and I concentrated on medium wave DX ability of the rigs, both for daytime DX with the locals at full power, and prior to sunrise for trans-Pacific MW splits.

I will also soon be posting an entry unrelated to the SDR, but hopefully still of interest to radio enthusiasts-- the results of a direct "A-B" comparison between a Kiwa-hotrodded Sony ICF-2010 and an Eton E1 portable.

The blog URL is below.

If you are talking 5 ft on a side for your Wellbrook loop, then your
results are similar to mine in that this seems to be all the ALA 100
will take without losing gain on the high end of the HF band.

How do you bring the wires back to the ALA100? I came up with two
possibilities:
http://www.lazygranch.com/images/radio/3loop1.gif
http://www.lazygranch.com/images/radio/3loop2.gif

The advantage of 3loop2 is that you don't have wire that is
perdendicular to the rest of the loop.

Also, what is the spacing between your loop wires?

Getting back to the SDRs, it would have been a more interesting review
if an analog radio were thrown into the mix. Also saving some audio
clips would be useful.

My amateur radio license, obtaining by memorizing the ARRL
License Manual in 1952-1953, was the catalyst that caused
me to seek and obtain a EE degree later in 1959.

The point is that an amateur radio license is a learner's
permit to exercise certain privileges during a lifetime
of learning. It is a permit, not a graduation certificate.

Put your thinking cap on. This is obviously for sale by one of those outfits that cruises about looking for stuff to
sell. Probably know nothing about radio.

There is no reserve on the radio, and it is currently at $909.00.

Could be a good deal for someone who might figure that even if there is something wrong with it, they can still get it
serviced, up and running, for a very good price vs. the cost of a new one.

No, but the whole enterprise might have had a chance of succeeding if
it had appeared 20 years earlier. Oh well.

I've bought a DIFFERENT radio item from that particular seller, and my experience:

1. The radio worked.

2. The seller was VERY slow in shipping and e-mail communications.

3. The radio was not packed fantastically well but it arrived intact.

That said, if you look at the other sales this guy does (networking and test equipment) and accompanying feedback you can see that he's probably getting this stuff at auction, sometimes is able to plug it in and see it light up, otherwise he leaves quality control up to the customer. He's not evil or anything, he just doesn't have the tech knowledge to do proper testing.

This is not the kind of guy who sells a unit that he knows to be not working. He truly doesn't have the ability to do anything beyond the most basic "plug-it-in-see-it-light-up".

Overall in my purchase I feel I got a bargain, but also realize that I got lucky too.

Tim.

Hmmm...the ad doesn't specify whether this receiver has been
'cleansed'. I'd want to inquire about that.

From what I've heard thus far I'm not impressed. Star 98.7 is running
a 250 song '80s playlist, KROCK (''Q-2'') is running heavily censored
Active Rock, maybe 350 songs . Sol Levine has the right idea. Kill
the AM. Right?

I use a digital for my family memories type shooting.

I use FUJI roll film in 120 size for my serious MF work. It is either Fuji VELVIA for transparencies or NPH for formal portraits.

In either case, digital or film, they have nothing to do with ham radio in general or CW in particular.

CW is!

The Computer industry got it right the first time.

They provide a (universal) case,
plug-replaceable power supply,
and plug-in circuit cards for features.
You can lash together a working system from "the junk bin".

Suppose the Radio industry followed suit;

You could buy the case of your choice (portable or desk-size)
A case insert for controls, frequency display.
A wall-wart would probably be a suitable power supply.
A plug in card for the audio quality of your choice,
a plug-in for the rf section of your choice.

Configure the radio with the features you need,
using (standardized) plug-in components.

Seems like manufacturers and consumers would win out.

Sol shut down 540 because he was legally required to to sell 1650, which he got "in exchange" in the X-band procedures. He did not shut it down because he wanted to; he did it because he got something better in exchange.

The current HD-2 channels are just starting, with programming that will "expand" in phases as more receivers come to the market. Right now, most are there to prove to the manufacturers that there will be a market.

The fact is, most listeners do not have more than a few hundred favorite songs in any genre. Several recent surveys have shown that the average number of songs on an iPod is around 300! When you go beyond that number, in most formats or genres, you are playing songs that listeners don't really like, which is hardly a gain.

Calling the limiting of a playlist to songs most people like, as opposed to songs they don't like, is hardly "censorship." It is more like "common sense."

The reason Baskin Robbins does not have 1000 flavors is that most people like the same 8 or 10, and occasionally try one or another in an array of 30 to 40. Same with music.

Exactly in what way is accurately describing the 1260 signal "bad mouthing"
anything? 1260 is a San Fernando Valley signal that gets a minimal coverage
of parts of the LA basin by day, and practically not at all at night. It is
a suburban signal, like many others (900, 1190, 1460, 1480, 1430, 1300,
1580, 1600, 1220, 1390, etc.) and is not SUPPOSED to cover LA entirely.

Hi Miso,

My Wellbrook ALA 100 uses connections that are closer to what you show in your first image (3loop1), but the lead wires are fairly short. I have positioned the windings on one "side" of the vertical support pole, and the protective box with the ALA 100 inside is on the other side, as close as possible to the ends of the windings.

I am using 3 inches spacing between turns, which is what Andy Ikin of Wellbrook recommended when I asked for his opinion on the project.

On the SDR radio comparison, I didn't include any audio clips as the results were so close. I suppose the clips could have demonstrated the audio *quality* difference, but I didn't think of that. Maybe when I next on a DXpedition with John he and I can record something; we may be back at the WA coast next month. Come to think of it, I can probably get an audio clip from him of some DX we both listened to and recorded during the last DXpedition, such as 2YB Wellington on 783 kHz.

I didn't included my modded R-75 analog receiver in the Winradio/Flex-Radio comparison, as I've already covered it in detail in former comparisons in the blog.

73,

Guy

I love it.
This IS what 2 meter repeater operation has been like for years.
But cell phones are cutting down on traffic except for the die hards.
In fact, 2M repeater operation is getting back to being respectable.

The way this was determined was by people trying out songs on focus
groups, but who picks the songs?

I guarantee you I could do a station with a thousand hits and it would
be #1.

IBOC opponents aren't technical illiterates. I'd say most of us are keeping pace with the digital revolution. And I'd also say the digital threat to radio is from the individualized media now possible, rather than from the quality of the audio.

Not only do people have more choices, but they have their own choices. That's a powerful pull. And IBOC is just a band trashing form of the old school mass media. IBOC adds little of merit.

Well, at least Ten-Tec is in business and services everything they
have made.

Unless it's been struck by lightning or something, it might be okay --
but obviously a gamble. I guess it'd depend on how close the auction
gets to $4 grand.

Oh, by the way... I had the use of one for a month. Nice enough radio, but certainly not a nice enough radio to justify the
price tag. No way.

The radio I bought from that particular seller had a street price (when new, in 1982, with options) of $10 grand. Of course I didn't pay that much, my actual price was a very tiny percentage of the new price, but I still regarded it as a large chunk of money.

This radio has had ROM revisions and this one may not have the latest.

It also has stickers on it that look like it may have been in
industrial use (calibration and ID stickers) in which case there is a
lot of hours on it. The radio has some long term use issues, which may
or may not have been mitigated by air conditioning in a rack.

Chances are the special bulb for the meter is out. You might be able to
get a replacement from Ten-Tec but it is not listed as a separate item
in the parts list. I replaced mine with LEDs.

EiBi shows 9925 to be 0200-0230. Also, 9925 to South America via Wertachtal,
Germany (500 kW) and 9925 to North America via both Wertachtal and Nauen,
Germany (500 kW). So quite probably two tranmitters in use at the same time.

That's just it. Those type rigs are way over priced. The same people or gov agencies that bought or buy them are the same ones who pay $50 for ball point pens. I've had a few over the years and they were nice when working but not a big leap better than any high end consumer rig. My dad used to bring them home from work and I fiddled with quite a few different makes. My favorites were always the WJ & Rockwell receivers. For quite few years I had a HF-1000 or WJ-8711 but it took a shit and at the time I couldn't afford to fix it but was able to sell it for enough to buy a R-5000.

If you hadn't busted the link I might be able to respond, but
otherwise I have no idea what you're talking about.

The Taliban, by the way, tried to warn Bush about 9-11, but they were
ignored (apparently).

Thanks. Does Andy have suggestions on how many turns or how long of a loop?

I tried a smaller loop and many turns and the performance was not as good as just a few turns on a large frame.

I'll go look for the R75 comparisons.

...
An all day, live poll by an Iranian TV station, Channel One, in Los Angeles, where call-ins were accepted from inside Iran, usually from cell phones, provided a response of at least 50% of callers stating openly they would welcome USA bombing raids, even if civilians died in the process. As long as it removed the Mullahs.

What follows may read like a bizarre, politically incorrect, war-mongering treatise. But then you, personally, did not fail to face down Hitler politically; probably did not endure his concentration camps; fight his storm troopers; nor were among the millions, no, tens of millions of dead in World War II.
...
http://www.iranpressnews.com/english/source/012448.html

From Lebanon

"On behalf of thousands of Lebanese, we ask you to open the doors of Tel Aviv's Ben Gurion Airport to thousands of volunteers in the Diaspora willing to bear arms and liberate their homeland from [Islamic] fundamentalism.

We ask you for support, facilitation and logistics in order to win this struggle and achieve together the same objectives: Peace and Security for Lebanon and Israel and our future generations to come."

The Lebanese army has less than 10,000 military troops. Hezbollah has over 4,000 trained militia forces and there are approximately 700 Iranian Revolutionary Guards in Southern Lebanon and the Bekaa Valley. So why can't the army do the job? Because the majority of Lebanese Muslims making up the army will split and unite along religious lines with the Islamic forces just like what happened in 1976 at the start of the Lebanese civil war.

It all boils down to a war of Islamic Jihad ideology vs. Judeo Christian Westernism. Muslims who are now the majority of Lebanon's population, support Hezbollah because they are part of the Islamic Ummah-the nation. This is the taboo subject everyone is trying to avoid.

The DSP chips in the radio cost a lot.

It's a really good radio and can sound better then the R8B depending on antenna and conditions. I can't tell which will sound better before I try them both. Generally the SSB is better on the RX340 as it is more flexible in the filter department. The R8B is more sensitive than the RX340. Lots of other differences between them and sometimes I can't figure out why one does better then the other. I'll be keeping both.

I'm sure that's true. What did exist 20 years ago that doesn't exist
today are the market conditions that would make HD a viable alternative
to FM and other competitors.

I said "by function". Not "locate the resistor", but "locate the
balanced modulator circuitry".

You used to have to draw a few schematics on blank paper - no hints.
Now you have to be able to identify a resistor. Big deal - that
should take all of 3 seconds to memorize. Memorizing which side of
the heart sends out the oxygenated blood doesn't make you a cardiac
surgeon.

Big difference between ice cream flavors and the number of songs people like. I find it hard to believe that anyone would limit themselves to a 300 song playlist... that would (and does) drive me totally mad. My personal library of mp3's (not CD's, I have thousands of those) has over 4500 tracks, all but a handful of which were Billboard Hot 100 or Top 100 Country, and more than 9/10 were Top 40. Some of those that were not in the Hot 100 were released before Billboard charts existed, and were in the top 30 of the charts of their day. ~97% of the library is tracks that were popular during my lifetime from about 5 years old on.

I may be a little eccentric, but I can't believe that the average person would like only ~7% of the music they hear over a lifetime.. or I doubt radio would exist. Certainly a 'Top 40' chart would be superfluous..

At David Eduardo's 'price point' of $100 for an IBOC capable radio, I don't see them flying off the shelves to replace peoples $15 table radio or $40 boom box. I also think that as IBOC is pushed harder and harder, and the public starts to figure out where all the noise on the bands is coming from, those complaints that he insists are not coming in, will start coming in in droves.

Source record: 84016

Dear Ms. Renee,

I own or have owned three Sangean-brand receivers, all of which had problems within a short time (after the warranty expired). One radio "died" entirely, another was getting its computer in a twist, and the third, still in use, gives some problems with its mechanicals - buttons, knobs, etc. Therefore I, personally, would not recommend anyone buy a Sangean radio. That said, I do know there are people who are totally satisfied with theirs, but I can only go by my own experience.

The Degen DE-1103 is a good buy at its price, if bought from the eBay dealer in China, but note that warranty service will be "pot-luck." I do know that the Degens are well-made, especially for a Chinese receiver. (Note that I do not own one.)

I DO own five Sony ICF-SW7600GRs as well as two of the previous model, the ICF-SW7600G. The 'GRs are all in current use. These radios, in addition to performing exceptionally well, especially for a small portable radio, are built to an extremely high standard and hold up very well, probably better than any other small portable. They are easy and straightforward to use.

It is my opinion that your husband (and you!) would like the Sony radio very much and would be pleased with it far longer than the others you mention. I highly recommend it to you.

Best,

Joe

I'll bet you'll sing a different song when your phone don't work, no
internet and there's no power, like after a wide spread natural disaster.
You'll be thankful there are hams then.

I push for hams to be effective in those situations. Everyone else wants
hams to be like CB'ers. Not me.

David,

With the limited range of future AM "HD" {IBOC} Broadcasting
this NAB 'Proposal' to allow AM Radio Stations; who no longer
can reach-out to isolated areas of their Media Market; to use
Low Power FM (LP-FM) re-broadcasters to serve the Radio
Listening Public.

FWIW - Spanish Language {Music} FM Radio Stations are
already doing this right now; up here in the Rural Sierra
Foothills along Highway 49.

this makes sense - in the public interest ~ RHF

> be #1.

It has been tried.

1. There are not 1000 hits in most formats (an exception or two exist)
2. when tried, the station with fewer and better songs wins in inverse
proportion to library size.

I had a station come after my classic rocker a few years ago. We had under
500 songs. They did 1,800. We had a 20 share, they had a 1.8.

Years before, I tried doing double the cuts of a leading AC. I lost big.
Listeners gave the variety image to the other station because they played
better music.

You'd be surprised.

Some people buy an LP and only listen to one or two tracks. Some buy
45s and never listen to the flipside.

Some people go into a particular restaurant and ALWAYS order one
certain thing. Not everyone has very broad tastes in music.

Besides, consider the fact that most "normal" people may listen to the
radio for a couple hours a day, instead of having it constantly playing
like us radio geeks; they probably won't notice the repetition.

In the meantime, however, I will stick with 1,000-song Jack-FM, instead
of 500-song Q-104.

SC,

Morris Code -plus- Continuous Wave (CW) Radio Transmission
-and- Semaphore Signals ? Do They Defining Amateur Radio ?
- - - The Times They Are A Changing !

While I can admire and respect an Amateur {HAM} Radio Operator
for Mastering Morris Code (CW).

Morris Code in and of itself does not define the Amateur Radio Service.

Morris Code
http://en.wikipedia.org/wiki/Morse_code

Continuous Wave (CW) Radio Transmission 'process' in
and of itself does not define the Amateur Radio Service.
http://en.wikipedia.org/wiki/Continuous_wave

The Amateur Radio Service is Greater than both Morris Code
and Continuous Wave (CW) Radio Transmission - IMHO ~ RHF

Boy Scout Merit Badge Requirements - "RADIO"
http://www.meritbadge.com/mb/093.htm
At one time when I was a very young boy nd a Boy Scout
I Learned to Send and Receive Morris Code at about 5WPM
-but- Then I also learned to use Flags to Send Hand-Flag
"Semaphore" Signals Too !
http://en.wikipedia.org/wiki/Semaphore_(communication)
Neither the ability to use Morris Code or the Semaphone
Flags to Communicate 'defined' Being A Boy Scout.

just an old boy scout at heart ~ RHF

It would be nice to see a comparison of shortwave comparison as some
receivers are intentionally attenuated in the MW band.

> IBOC opponents aren't technical illiterates

I have never thought they were. Most are, however, satisfied with the present analog technologies and have a different opinion on the reasons for change. The most common issue is to see the opponents focus on content, without considering the disadvantages of a heritage delivery system.

> I'd say most of us are keeping
> pace with the digital revolution. And I'd also say the digital threat to
> radio is from the individualized media now possible, rather than from the
> quality of the audio.

HD brings not just an improvement in perceived quality, but, with HD 2 and even HD 3, many more free options.

Most other alternatives that can be called "new radio" are fee based in some way, whether the fee is for the content or the delivery method.

The biggest threats are not these IMHO. They are gaming and other options for leisure time activities, not alternative radio staitons or substitutes.
>
> Not only do people have more choices, but they have their own choices.

A majority of adults do not want to spend time on such choices, at least yet. Part has to do with the complexity of delivery. There is an opportunity for radio to adapt, and I think this is HD.

> That's a powerful pull. And IBOC is just a band trashing form of the old
> school mass media. IBOC adds little of merit.

The band is only trashed if something anyone is listening to is no longer listenable. The issue for AM, for example, is that the audience is getting older and no younger listeners are coming in. This is based on a combination of quality and content... but the content can not be made appealing to under-45's without a commensurate quality gain.

Radio plays songs that are hits today.... most songs from the past were hits
but are not appealing for many reasons today.

When you actually play songs for real listeners, you find that there is a
very short list in any mass appeal format of songs that are currently
appealing.

The #1 station in San Antonio, which has been #1 for 5 years, played 57
songs for its first 6 months, and plays about 110 songs now.

The #1 music station in LA plays less than 300 songs, and it has been in the
top three or four stations for 16 years.

What listeners do, if they have a variety of tastes, is look for the best of each genre on different stations. So if you like several genres, you hear the 300 to 500 best on three different stations... a total of over 1000 songs. And you will find that mood determines genre choice at any one moment... so you just can't play multiple genres on a single station in most cases. The exceptions are very rare.

I just looked at the stations reported in the LA book. Listening to out of
metro stations or out of primary signal contours (64 dbu for FM and 5 mv/m
for AM) is less than 1% of total.

Good point. The average use of radio is just over 19 hours a week by the
average American. That is a little over 2 hours a day, so the repetition is
not going to be at all noticeable.

Glad you feel you can throw away 100,000 listeners. I'm sure they'll
appreciate you. (and I'm probably vastly underestimating the listener base
in the greater Los Angeles area by putting it at 10,000,000)

I hear the same "hits" on KFOG all the time. It's the songs I can't
stand that I noticed the most. Who the hell wants to hear the Cars do
"best friend's girlfriend" in 2006. Hell, I don't want to hear any song
by the Cars. They are so last century...The same with Queen, Madness,
Yes, and similar bands that really don't stand the test of time.

I guess the point is my 300 songs won't be your 300 songs, but if they
play 3000 songs, at least my list will be covered.

That is a 1% of listening share... and I said "not even." A 0.8 share is
equal to about 13,000 persons.

These are 100,000 listeners who also listen to many local stations home to
the market.

For all we know, the out of market listening is done while out of the
market, such as commuters who work outside the metro or travel there. It
also may be internet listening to non-local stations by local residents who
want to stay in touch with a home town. Distant listening is much easier and
clearer via streaming.

"For all we know." Now there's the rub. Why not just admit that you DON'T know. I personally don't believe in statistics based upon a tiny percentage of a poplulation, where someone tries to tell me that 10,000 people in a metro area of millions can tell what all those millions like to listen to, watch, see, whatever. You and your kind will tell me that there is a margin of error in these statistics of +/- 3 or 4%. I'm not really buying that, either. Have you gone door to door to ask each person in the area in question what they like in order to verify the results supposed from the tiny sample?

I can take my own polls that are just as scientific and just as likely accurate as yours are. I suspect that about 75% of those polled in this NG and in rec.antiques.radio+phono would say that they are not interested in the introduction of any digital format into the existing bands at all. I'm with several of the others, and feel that a totally new band should be used to introduce a digital-only service. If you want to use iBiquity's trashy system there, then fine. Perhaps you would even get some of these people to tune into it (one of them would not be myself.)

In short, if you want me to buy anything you say about how listeners feel about the IBOC system in general, or the QRM to adjacent and second adjacent channels in particular, then go out and interview them all and I'll go along with what they say, if you will do so also if they tell you to stuff it. I'll bet the subject of potential interference to other stations is not even brought up in the questions asked. How about putting that one in there? "If there were a potential to have interference to a weak station you listen to, even occasionally, would you still want "HD radio" available"? As has been noted before, IBOC is a problem masquerading as a solution to a problem that doesn't exist as far as the general populace of the country is concerned.

2930. Re: Winradio g313e and Flex-Radio SDR-1000 Compared

Newsgroup: rec.radio.shortwave
Date: 2006-07-19 04:46:54 UTC

Body handling: HTML body converted to readable text

Hi Brian,

Neither the Winradio or Flex-Radio models have any attenuation in the mediumwave range, nor on any other band that I know of. I do know the Flex-Radio folks clearly state "full sensitivity" throughout it's frequency range, and in some forum postings their representatives have mentioned "no attenuation" on any frequency a few times in the 2+ years I've followed the SDR-1000's development. My experience bears this out.

During the comparison, John and I also did some checks in the tropical bands, and found the radios very, very similar on those frequencies too. In fact, at home I use the SDR-1000 much more for tropical band DXing than I do for medium wave, as the trans-Pacific stations are not heard regularly here. I'll mention, though, that once in a while I find my modded ICOM R-75 more sensitive on a DX signal, but the SDR-1000 often has better copy due to the cleaner sounding reproduction. Then there are rare times that the R-75 is clearly the winner on HF. It never hurts to have more than one receiver and more than one antenna around!

Miso-- my comparisons to the ICOM R-75 are here and there throughout the blog. Two to look up, however, are from March 26th and April 16th, 2006.

Regarding the ALA 100 loop: if I recall, Andy didn't think more than 3 turns would be of any benefit. I don't think he mentioned any max. total wire length. I wasn't planning on using more than 50 feet, as that's around the maximum recommended for a large single-turn loop (non-rotating :^) The nice thing about the ALA 100 model is the flexibility for experimenting with various shapes and dimensions. The new ALA 100s also have a higher dynamic range/IP3 preamplifier than the older Wellbrook models like the ALA 1530.

73,

Guy

Actually the Code that Sam developed is completely unlike the code we use on radio. What is tested for is the "International Morse Code" Sam's code was click based and radio is beep based.

< Snip >

1. Money invested in receiving equipment.
2. Going to a more complex transmission scheme.
3. Control over who can listen.
4. Using a proprietary scheme over one in the public domain.
5. Only somewhat compatible with existing spectrum usage.
6. The change is advantageous for the broadcasters in reducing costs and
possibly creating additional revenue where the listener just gets
additional costs. A deal for the listener...not.

>> market, such as commuters who work outside the metro or travel there.
>
> "For all we know." Now there's the rub. Why not just admit that you DON'T
> know.

Actually, we do know. We can see the listening ZIP codes for work and home of every diarykeeper. We can also make logical conclusions that if an LA resident is listening to WSB at noon, they are listening to a stream. Since none of us have much interest in this, we don't tabulate it when we review diaries since the data is not actionable.

>I personally don't believe in statistics based upon a tiny percentage of a
>poplulation, where someone tries to tell me that 10,000 people in a metro
>area of millions can tell what all those millions like to listen to, watch,
>see, whatever.

Actually, using LA again as an example, there are 7,000 diary keepers over 12 weeks for each survey... or about 600 a week.

Statistics determins the accuracy of any poll, and Arbitron gives a method to calculate the margin of error for any data in the survey. The more granular the data, the bigger the margin.

Statistics is the only science where "error" is not a dirty word. The whole idea of polling is to use as small a sample as possible to get the desired results. Since advertisers are the users of the data, there is no reason to increase the sample if they are willing to spend about $21 billion a year based on the ratings we have.

One test of a survey is to do the same sample size several times, and see if each sample replicates the other(s) within the desired margin of error. In all cases, Arbitron samples are replicable. That means the sample size is accurate for its stated purpose which is putting a value on radio advertising.

> You and your kind will tell me that there is a margin of error in these
> statistics of +/- 3 or 4%.

Actually, the margin of error varies by staiton audience size, age under study, and daypart. A staiton in LA with a 4.8 (current #1 station, KLVE) is really betwen a 4.6 and a 5.0. A station with a 0.4 share is between a 0.2

and a 0.6, or a huge range by percentage. The stations advertisers buy have big numbers, so the accuracy is very good... and many advertisers hedge by doing multi-book averages.

Keep in mind, Arbitron is a sales tool. For programming, we do prporietary research of totally different kinds.

> I'm not really buying that, either. Have you gone door to door to ask each
> person in the area in question what they like in order to verify the
> results supposed from the tiny sample?

I have replicated Arbitron over and over and over. You do not have to do a census, as nobody could afford this. I can do a phone survey instantly that will be highly in agreement with Arbitron if I use the same techniques for balancing the sample to reflect the population by age, sex, geography and ethnicity. I even once did a sample of people in a seminar and came very close to replicating Arbitron. This is not black magic.
>
> I can take my own polls that are just as scientific and just as likely
> accurate as yours are.

I doubt it. First, you have to have a sampling technique that is proportional, weighting formulas to smooth any variations from a perfect sample, lots of people and software to tabulate, etc. You have to incentivize the participants to track listening for a week (or a year with the people meter), and the sample has to be random. Arbitron has a whole crew of Ph. D's working on sampling technique and then the ad industry audits them yearly for about a month.

For proprietary surveys such as radio research companies sometimes do, count on a cost of several thousand dollars a week per station. And this is just for a predictive report on the demo the station most wants, not the whole market. An Arbitron survey of LA costs hundreds of thousands of dollars each quarter.

> I suspect that about 75% of those polled in this NG and in

> used to introduce a digital-only service. If you want to use iBiquity's
> trashy system there, then fine. Perhaps you would even get some of these
> people to tune into it (one of them would not be myself.)

I would expect that DXers would not constitute a random sample of a market. You are off to a bad start. I also know that listeners have a lot of interest in having more free choices and digital quality. They just do not know, yet, that HD offers this.
>
> In short, if you want me to buy anything you say about how listeners feel
> about the IBOC system in general, or the QRM to adjacent and second
> adjacent channels in particular, then go out and interview them all and
> I'll go along with what they say, if you will do so also if they tell you

> to stuff it.

The cost of surverying every US listener would be greater than the buget for the US Census. A billion, maybe? There is no reason to do this when a random probability sample can be extremely accurate with less than 1000 interviews per million population.

> I'll bet the subject of potential interference to other stations is not
> even brought up in the questions asked. How about putting that one in
> there? "If there were a potential to have interference to a weak station
> you listen to, even occasionally, would you still want "HD radio"
> available"?

We already know that there is essentially no measured listening to weak signals.

> As has been noted before, IBOC is a problem masquerading as a solution to
> a problem that doesn't exist as far as the general populace of the country
> is concerned.

AM is getting older. The average listener age has increased by about one year as every year passes. In a few more years, there will be no salable audience on AM as all listeners will be over 55. At that point, the band ceases to be viable, and you will not worry whether the signals are weak or strong, near or far, as there will be nothing left on AM but a few preachers or some station in Russian or Farsi in a big metro.

Every alternative costs more than an HD radio. Radio stays viable as a free
medium, the listener gets more channels and the price of receivers will come
down. And the analog signal will not be going away any time soon.

It will cost more to broadcasters. We would not do it if it did not protect
the future and enhance revenue. It is a business.

Why would another band cost more money for the listener? Why would partitioning the current band into HD and analog cost more money for the listener? Why would other transmission schemes cost more money for the listener?

It wouldn't cost the listeners more but it would cost the broadcasters more money. So your problem is selling IBOC to the listeners where the benefit is small. The advantage to IBOC is for the broadcasters. IBOC might be a way for broadcasters to cut their electric bill when analog is dropped but that's about it. IBOC will cause listeners to toss their current radios for new ones that will not sound any better than analog for local signals either. IBOC is money down the drain for the listener.

The result is a large cost to the listener for a new radio for little if any benefit. The listener will not have the option of listening to "out of market" signals limiting their choices.

2937. Digital Quality is an oxymoron

Newsgroup: rec.radio.shortwave
Date: 2006-07-19 06:23:35 UTC
From: Brenda Ann <brendad@shinbiro.com>
Message-ID: <e9kj10$76b$1@news2.kornet.net>
Source record: 84073

David Eduardo stated in a reply to one of my posts (that I accidentally deleted while trying to respond) that "people want digital quality... they just don't know that HD provides this yet."

I submit more physics to back up that this is an oxymoron. To wit:

There is no way that ANY digital form of reproduction can EVER be more accurate than an analog one for any given bandwidth/frequency response. The best you can do is get a reasonably close APPROXIMATION or FACSIMILE of the analog signal if you have a high enough bitrate AND sampling rate. It would be physically impossible for a digital reproduction system to perfectly reproduce a complex analog signal (or even a sine wave) out of smaller and smaller square waves.

AND

You can't get anything like a high quality reproduction out of a 7 KHz digital bandwidth on an AM IBOC channel. It doesn't matter what logarithm is used, you are going to LOSE frequency response, dynamic range, and waveform accuracy using any sort of digital codec to represent an analog signal. Even 64Kb mp3 is considered garbage for most purposes, and you try to convince me (and others) that a 7 KHz stream is as good as FM quality? The laws of physics call your bluff.

DGN,

The Modern International Morse Code was invented by
Friedrich Clemens Gerke in 1848 and first used for the
Telegraphy between Hamburg and Cuxhaven in Germany.
After some minor changes in 1865 it has been standardised
at the International Telegraphy Congress in Paris (1865),
and later normed by the ITU as International Morse Code.

The reality is worse than the theoretical because you have to add the
distortion and noise of analog to digital conversion and then digital
back to analog.

Analog uses the bandwidth as a contiguous spectrum where the digital
schemes use a series of discrete carriers so it is not as efficient.
Lower efficiency, quantization errors, low bit rate means that there is
no chance digital can sound as good as analog in the same bandwidth.

> that Morse encoded spark
>

Actually that is not correct.
Within the original meaning of CW, the Titanic used a CW transmitter.
It was not a spark transmitter, the rf energy was produced by an alternator
which provided 'continuous' rf power, hence CW. The output was not a damped
wave that a spark transmitter would produce, but an interrupted 'continuous
wave' (from the alternator).

Like your link says, it's MORSE code, as in Samuel F. B. Morse. Who's
Morris?

> Sam's code was click based and radio is beep based.

Sam's original equipment used ink and scrolling paper to
record the dots and dashes because he didn't think an
ordinary human being could distinguish between the sound
of the dots and the sound of the dashes. He was wrong.
Human operators quickly discovered that they could distinguish
the difference between the down clicks and up clicks and
therefore distinguish the dots from the dashes.

It is true that Sam's "American" Morse was different from
"International" Morse in about a dozen characters but both
used dots and dashes. Still, more characters were alike
than were different.

The term "lid" may have originated from newbie Morse operators
laying a lid on top of the relay receiver to make it easier to
distinguish the dots from the dashes.

oridinary humans HMM is it realy proven that ordinary human can do it
by ear Cecil or merely proven that enough to man the telagraphs of the
day could do so?

Please note that I didn't say ordinary human beings could read
telegraph code. All I said was that ordinary human beings could
distinguish between the sound of a dot and the sound of a dash.

I think that's a pretty safe assumption with "ordinary" in the
sense of an average human possessing average hearing abilities.
I would bet that a dog could even be trained to distinguish a
dot from a dash.

I don't think he even believes half of what he says in this group. He
has a vested interest ($$$) in promoting IBOC. That's where his
'conviction' comes from.

In truth, IBOC came from two places...one was the long standing
desire to bring new technology to the AM band...like AM stereo. The
other was an FCC mandate (that's Michael Powell's FCC, by the way) that
all such schemes be digital.

I remember talking with Craig Kingcaid, chief engineer at KEEL at the
time, about the digital future of AM radio, as far back as 1986. He
couldn't wait. No practical systems had been proposed, at the time, but
the talk was rampant that eventually, all broadcasting would be digital.
And this was before Powell's FCC issued the digital mandate.

So, while it's fun to poke at David as the source and the cause of
what's happening, he's only implementing the only option that's been
made available to him. Eureka, while a better system, could not be
implemented here because the required spectra were/are in use by defense
operators, and no other system has been approved by FCC.

This is why I've been saying since these discussions have begun that
the only way to impact the implementation of IBOC is to voice your
opinion with the only entity that can make a decision, and that's FCC.
And that any such complaints MUST be based on active interference to a
LOCAL station.

The Commission is largely bureaucrats. And judging by the
demographics, not large users of AM radio, so they're not really tuned
in, as it were, to the issues faced by real world listeners, like you
and me. They are relying on their technical advisors--most of whom don't
live where IBOC interference impinges on LOCAL listening,and lobbyists
for entities like iBiquity--who have a different agenda altogether, and
broadcasters who are desperate for something to help stem the erosion of
listeners....many of whom are just not that bright anyway, and will
grasp at anything that's sold to them. Hell, I worked at one station
where the GM had an afternoon meeting with someone from Eumig, and the

next week, had us running all programming off CASSETTE as a profit generating venture. (One of my mentors, years ago, told me that most of the people who go into Radio flunked out of Hamburger U. Well over half of the GM's and owners I've worked for in my career, entered Radio after getting pushed out of McDonald's. One, was responsible for one of the few failed McDonald's in the US.)

So, if there's going to be any movement on IBOC, other than runaway expansion, and, at this point, there may be WAAAAYYYYY too much invested to simply toss it now (although redeployment under other operating parameters may be possible...but further delays carry their own baggage now that the bands are full of IBOC rash), word from the public is going to have to flood the desks of the Commissioners at FCC. And it's all got to be from real listeners experiencing local interference to content that's otherwise unavailable.

What's been going on here, by sniping at David, as much fun as that is,(and, in truth, some of the discussions have been quite lucid--He has far more patience than he says he does) is you're complaining to the entities generating the interference. That does virtually ZERO good. First, they don't care, they've got an enormous investment, and quite frankly, if you're not listening to their stations, they don't really give a shit that you're not happy. Your complaints impact them in no way. If you're going to complain to a station, you need to tell the station that's being interfered with. Now, THEY will notice. You're part of THEIR revenue stream. Your discontent impacts them directly. And if YOU are unhappy, then there are OTHERS who are unhappy. That means ratings points lost, revenue share loss, and eventually...well, you get the idea. And the station being interfered with has a direct mechanism for addressing such complaints with FCC. A station you listen to, that you can no longer enjoy because of intereferences can be powerful ally, here.

So, if you want to enlist the aid of other entities in your campaign to sway FCC, then enlist the aid of broadcasters that you regularly listened to, that you can no longer. And they must be LOCAL broadcasters.

Get a flood of comments on the desks of Commissioners from real listeners, and broadcasters encountering real world interference from this crap, and you've got a chance. So, to paraphrase what Dino said every week, 'Get those cards and letters coming in.' There's been a delay in the decision to implement IBOC full time....now's your window. Time is of the essence.

But there is a huge investment at play here...and enormous economic impact...It may already be too late to derail this train. And most of the members here have spent a lot of time sniping at the wrong people instead of making their voices heard where decisions are made. At best, now, there may be a chance to reshape the implementation. But the likelihood is that AM IBOC, no matter how shortsighted, as broadcasters often are, is here to stay. At least until the AM band collapses and is sold to Comcast for telemetry.

I was a bit surprised you did not refer to the (continuously
graphically adjustable) audio filter of the G313e. Did you overlook
this feature?

Surely this allows you to adjust the audio spectrum exactly the way
you want it, so it seems to me that this comparison is not exactly
valid, because it would have entirely depended on the filter settings.

The G313e performs well down to 10 kHz. See
http://www.winradio.com/home/g313e.htm
(click on Technical Specifications botton right, specs below 150 kHz)

From my own experience, this is probably the best receiver for LF
experimentation currently available.

Well, what is "analog"? A phonograph needle skittering over dust in a
rut dug in vinyl? A magetic head reading bits of iron in a piece of
recording tape? The analog process has its own problems in translating
sound to the ear.

And, if the sound is originally recorded digitally, anyhow, you're not
going to improve it by going analog.

Does any studio still use a "tape machine"?

VOA should be re-named: "Amerika Kisses Israeli Ass Radio".

VOA is a Govt broadcasting service so what else are we to expect?

Why is it a suprise that the first thing the Israeli's bombed in
Lebanon was the remote TV and Radio transmission facilities of
Al Jazeera and Al Arabia ?

Amerika kisses jew ass 24/7 cause if they dont the dirty kikes
will crash the FED and the USA Banking System that will
precipitate a 2nd Civil War. (which at this point looks more
and more to be a possible good thing in the end game long run ??)

Then maybe KFOG-FM isn't the right station for you? That's why I've stopped listening to most FM stations, with the exception of my local Jack FM.

But then again, it doesn't matter, since I'm certainly not the type of person that advertisers would want to waste money on catering to. ;)

George, I don't have much experience tuning longwave, so I can't comment on the two receivers used for this band. I do know there are some LW enthusiasts using the SDR-1000, but they're in the minority of Flex-Radio users like I am.

Regarding the audio filter in the g313e, thanks for the reminder. We did try this facility with the Winradio, as well as the audio equalizer in the SDR-1000. I didn't think the Winradio's audio filter added any benefit to helping increase intelligibility of weak signals, over what the excellent DSP filter already provides. Perhaps we weren't using it in a way that helps dig out an ID on weak signals. The SDR-1000's equalizer definitely helps me to boost the critical midrange voice frequencies at times; I have a favorite setting I use about 80% of the time when DXing. For most of the receiver comparisons, though, we turned off both the Winradio audio filter and the Flex-Radio's audio equalizer.

From AllAccess.com

NAB Asks For FM Translators For AM Stations
The NAB is petitioning the FCC to allow AM stations to use FM translators to fill in coverage areas within the AM's 2 mV/m daytime contour or within 25 miles of the station's transmitter. The petition notes AM stations' reception problems from electrical interference and the pending trouble with extending Daylight Savings Time for four additional weeks starting next year, meaning stations which power down at night will experience more weeks of diminished service in drive times.

I think the real oxymoron is the idea that we can "save" AM by making
it virtually indistinguishable from FM. That is not salvation. It is
destruction (with perhaps a small amount of desecration thrown in for
good measure). However, it is destruction that, at least in the short
term, will be profitable for companies like Ibiquity, and as long as
the profit motive is there we'll have shills like Tardo stopping by
from time to time.

Other systems, like WiMax, etc., have fees for the delivery technology, and
the "receivers" would initially be as expensive as current HD ones. My first
cellular phone was over $800....
>
> It wouldn't cost the listeners more but it would cost the broadcasters
> more money.

It woud cost the lsiteners, as what you suggest obsoletes every radio in
America. And for broadcasters, a new band would cost what HD currently
costs. A total reallocation on AM would simply hasten the death of the band.
Imagine, there are about 1500 directional AMs and many would no longer fit
on current land, or require zoning for new towers or moved ones... probable
average cost of a half-million each!. The average US AM bills $300 thousand
a year.

>So your problem is selling IBOC to the listeners where the
> benefit is small.

Digital sound, double the channels on FM is small benefit? Free is a small
benefit?

> The advantage to IBOC is for the broadcasters. IBOC
> might be a way for broadcasters to cut their electric bill when analog
> is dropped but that's about it.

Long time away on that.

>IBOC will cause listeners to toss their
> current radios for new ones that will not sound any better than analog
> for local signals either. IBOC is money down the drain for the listener.

HD, on local signals, sounds much better, especially on AM... and FM doubles the channels at least-
>
> The result is a large cost to the listener for a new radio for little if
> any benefit. The listener will not have the option of listening to "out
> of market" signals limiting their choices.

In LA, with 9,8 million 12+ persons, the average listening to out of market / out of primary signal are stations is about 13,000. Much of this may be from streaming, or while the listener themselves was out of the market. In other words, there is essentially no listening now, so nothing is being disrupted.

None of this matters. What matters is consumer perception, and if it is not
digital, it is not good in today's world.

P.S. The AM has greater compression, but its apparent badwidth sounds pretty
analog FM like. Have you ever listened to an HD AM using the current
firmware (2.2.5) play music? It _does_ sound "like FM."

Being of "La Raza" means being a working class, blue collar Mexican. I am
not that.

I _am_ a member of the National Council of la Raza, which uses a totally
different meaning for the term.

Why would the success of HD be of importance to me if it destroys 14 of our radio stations in the process? In fact, based on the potential of HD, we just bought this year another AM, this one in the San Francisco market.

And the statistics are not mine. I just looked at the Arbitron data, just like anyone else subscribed to it can.

You're just full of numbers, aren't you?

In 1952 radio listening was Prime Time more than Drive Time.

I listen to radio all day long and most of the time at night. TV
makes your brain shrink.

You might think you can make a large enough profit in the short term to
justify it. After all, the destruction won't happen overnight. It will
happen only gradually, as HD proves unable to compete with FM and other
media.

Alternatively, those who set the strategy at Ibiquity might be really,
really stupid (unlikely, but it wouldn't be the first time).

>

Oh, that's right, and I forgot that Arbitron is the one true source of
impartiality in the world. Gimme a break. Arbitron is ultimately a
marketing research firm. Reminds me of the old saying "A good marketer
finds out what people want; an excellent marketer tells people what
they want."

> didn't even READ their posts.

No, no body has answered the points. They have complained and put out
information that is false.

1. There is a marked improvement in AM quality on HD, making it comparable
to analog FM.
2. FM HD offers additional free channels.
3. The listener does not pay for HD.
4. The listener pays for satellite radio.
5. The lsitener pays for delivery for streaming, wifi, WiMax, etc.
6. There is no other band available for digital in the US.
7. Any change in delivery requires new radios, whether satellite, broadband
or whatever.
8. HD is just beginning its consumer marketing, so it is early to expect
reasonably priced radios.
9. All new consumer electronics start at high prices: CD, DVD, TV, Cellular,
etc.
10. There is hardly any listening to out of market signals.
11. AM will not survive without some "tonic" to revive its relevancy among
listeners advertisers want to reach.
12. AM for under-45 listeners is already dead.
13. The "Digital" term is very important to a large mass of consumers.

I don't work for iBiquity. If this is the basis of your premise, then you
have a faulty foundation for your arguments.

There are no Mexican stations in LA or San Antonio... Mexican stations are
in Mexico.

All stations in the ratings count.

KCRW has a 1.2 share in LA, while the sum of the four AC stations is about
13 sharess.

I'm sure if you added commercials to KCRW, it could manage to work its way
down to a 0.98 or so.

Some of these "points" are not points so much as observations that invite no response at all. Of those "points" that call for an answer, all have all been answered, most more than once.

I think those dollar signs in your eyes are affecting your ability to read other people's posts.

> a year.

The listener has to buy a new radio in any event so it would not be more
expensive. The old radio can be used to listen to the old band or format

and the new radio would provide additional choices. The industry is
trying to limit listener choices instead of expanding them.

> > So your problem is selling IBOC to the listeners where the
> > benefit is small.
>
> Digital sound, double the channels on FM is small benefit? Free is a small
> benefit?

I'm addressing AMBCB not FM but the same logic applies. FM use greater
bandwidth a channel and it is possible that there is enough for a
digital scheme to sound OK. However, if that bandwidth is further split
into more than one stream you are back to lower bit rate and poor
quality.

> > The advantage to IBOC is for the broadcasters. IBOC
> > might be a way for broadcasters to cut their electric bill when analog
> > is dropped but that's about it.
>
> Long time away on that.

Maybe, but this is the only reason I can see motivating broadcasters to
implement IBOC.

> the channels at least-

This is impossible according to information theory. With less efficient
use of the same bandwidth digital must sound worse.

The readers of this newsgroup understand the broadcaster/marketing
perspective but except for you we do not share the view of implementing
a scheme that maintains the broadcaster status quo over new choices or a
system that would be an actual improvement in quality and choice for the
listener.

If AM stations want to simulcast on FM, do what anyone else wanting an
FM station is forced to do. Either pony up and buy an existing
transmitter or apply for an allocation

And then turn in your waste-of-bandwith AM licence.

Arbitron provides data for advertisers to use. It is audited by these
advertisers by a group of the finest experts in the US, the members of the
Media research Council.

And, yes, Arbitron is very impartial. They do not care which staitons go up
or down. The jub they have is to measure this dynamic and report it.

So?

Actually, mid-days has as much listening as afternoon drive, so your
assumption is wrong.

And the usage in hours of radio in 1965 when Arbitron started was 21 hours.
In 1980 it was just undre 21 hours (20:45) and it has been in that level
ever since.
> I listen to radio all day long and most of the time at night. TV

The average person listens just over 2.5 hours a day.

Not with the current setup. Although there might be more bandwith
opened up once the analog part of the signal is turned off for good.
But that won't happen for YEARS.

The "killer ap" for AM IBOC is the improved sound and reduction of
static on the digital audio stream.

The killer ap for FM, though, I believe is the additional channels. I
doubt most people wil notice an increase in sound quality in "digital
FM" (if you can still call it that).

You gotta be kidding! The technical reasons why a system sounds good or
not does not matter? Digital is better than analog? No way guy!

> P.S. The AM has greater compression, but its apparent badwidth sounds pretty
> analog FM like. Have you ever listened to an HD AM using the current

What happens is that artifacts (distortions) are introduced similar to
pixilation in photographs. The conversion of analog to digital and back
by actual hardware also introduces additional distortion and noise.

It is not possible that digital can sound better than analog in the same
bandwidth.

Obviously, if a significant number of commujnities put in free WiFi, and
there are portable devices that are cheap, this is someting that will come
in the future. But as to current environments, it costs, directly or
indirectly, to get delivery of radio alternatives. AM and FM are free.

I suspect, eventually, all radio will be delivered with a new technology.
But if it took satellite, which is a good concept, 5 years to get to 10
million subscribers, I am waiting with caution for the "real" system to
emerge.

Radio, unlike streaming and satellite (in most cases) is highly portable.
There are, by varying estimates, 800 million to one billion radios out
there. Replacing one per household will not make a new band viable.

And, as Peter said, ther eis no available specturm anyway.

When split into two, the bandwidth is enough for two better-than-FM
channels.

Peter says he has heard discussion, but I have never heard any discussion of
turning off analog until 100% of usable radios are digital. The power bill,
in a larger market, is so insignificant that it does not matter.

It sounds better. COmpression algorithims essentially fool the ear by
removing "irrelevant" data. AM HD sounds like FM analog.
>

Since the economics of radio are such that more stations reduces service
(proven by 80-90 all over America) there is no advantage in this unless you
want 1000 streams from personal iPods.

I don't see anybody carrying around a HD portable radio.

> And, as Peter said, ther eis no available specturm anyway.

You take it over just like IBOC does to AMBCB.

> > I'm addressing AMBCB not FM but the same logic applies. FM use

Low bit rate audio sounds like crap. FM has enough bandwidth for one
stereo stream not two.

If Peter said that then I think he is wrong about it. Anyone running a
business wants to reduce costs that add directly to the bottom line.

Your ears must be more easily "fooled" than mine. I don't think most
people will be "fooled."

I think you have this subject all wrong. Your assertion that AMBCB must
go digital to improve the resultant sound quality or fail as a
commercial medium is a house of cards.

1. IBOC can not sound better than analog on local signals for technical
reasons so the argument of "ear fooling" is totally unconvincing.

2. Even if IBOC would make an actual improvement on local signals it
will limit "out of market" listening. And yeah, we know you don't care
about that since it is not part of the stations revenue stream but it
does result on a limiting listener choices.

3. It their is a problem with the AMBCB marketing it is programming
related not the technical delivery.

So where are we at? The industry does not address the real issue of
programming and instead screws with the technical delivery to limit
listener choices.

Message-ID: <lntsb25dbeutqjsa7c60fch7ff5s11sk95@4ax.com>
Source record: 84265

There were 39 combat related killings in Iraq in January.
In the fair city of Detroit there were 35 murders in the
month of January.That's just one American city,
about as deadly as the entire war-torn country of Iraq.

When some claim that President Bush shouldn't
have started this war, consider the following:

a. FDR led us into World War II.

b. Germany never attacked us; Japan did.
>From 1941-1945, 450,000 lives were lost ...
an average of 112,500 per year.

c. Truman finished that war and started one in Korea.
North Korea never attacked us
>From 1950-1953, 55,000 lives were lost ...
an average of 18,334 per year.

d. John F. Kennedy started the Vietnam "conflict" in 1962.
Vietnam never attacked us.

e. Johnson turned Vietnam into a quagmire.
>From 1965-1975, 58,000 lives were lost .
an average of 5,800 per year.

f. Clinton went to war in Bosnia without UN or French consent.
Bosnia never attacked us.
He was offered Osama bin Laden's head on a platter three
times by Sudan and did nothing. Osama has attacked us on
multiple occasions.

g. In the years since terrorists attacked us , President Bush
has liberated two countries, crushed the Taliban, crippled
al-Qaida, put nuclear inspectors in Libya, Iran, and North
Korea without firing a shot, and captured a terrorist who
slaughtered 300,000 of his own people.

The Democrats are complaining
about how long the war is taking.
But
It took less time to take Iraq than it took Janet Reno
to take the Branch Davidian compound.
That was a 51-day operation.

We've been looking for evidence for chemical weapons
in Iraq for less time than it took Hillary Clinton to find

the Rose Law Firm billing records.

It took less time for the 3rd Infantry Division and the
Marines to destroy the Medina Republican Guard
than it took Ted Kennedy to call the police after his
Oldsmobile sank at Chappaquiddick.

It took less time to take Iraq than it took
to count the votes in Florida!!!!

Our Commander-In-Chief is doing a GREAT JOB!
The Military morale is high!

The biased media hopes we are too ignorant
to realize the facts

But Wait there's more!

JOHN GLENN (ON THE SENATE FLOOR)
Mon, 26 Jan 2004 11:13

Some people still don't understand why military personnel
do what they do for a living. This exchange between
Senators John Glenn and Senator Howard Metzenbaum
is worth reading. Not only is it a pretty impressive
impromptu speech, but it's also a good example of one
man's explanation of why men and women in the armed
services do what they do for a living

This IS a typical, though sad, example of what
some who have never served think of the military.

Senator Metzenbaum (speaking to Senator Glenn):
"How can you run for Senate
when you've never held a real job?"

Senator Glenn (D-Ohio):
"I served 23 years in the United States Marine Corps.
I served through two wars. I flew 149 missions.
My plane was hit by anti-aircraft fire on 12 different
occasions. I was in the space program. It wasn't my
checkbook, Howard; it was my life on the line. It was
not a nine-to-five job, where I took time off to take the
daily cash receipts to the bank."

"I ask you to go with me ... as I went the other day...
to a veteran's hospital and look those men ..
with their mangled bodies in the eye, and tell THEM
they didn't hold a job!

You go with me to the Space Program at NASA
and go, as I have gone, to the widows and Orphans
of Ed White, Gus Grissom and Roger Chaffee...
and you look those kids in the eye and tell them

that their DADS didn't hold a job.

You go with me on Memorial Day and you stand in
Arlington National Cemetery, where I have more friends
buried than I'd like to remember, and you watch
those waving flags

You stand there, and you think about this nation,
and you tell ME that those people didn't have a job?

What about you?"

For those who don't remember
During WWII, Howard Metzenbaum was an attorney
representing the Communist Party in the USA. Now he's a Senator!

If you can read this, thank a teacher.
If you are reading it in English thank a Veteran.

KE4ODD

Service to my country? Me too and I've got my DD214 and 5 point veteran preference to prove it.

I am neither naive nor sarcastic in this case. Arbitron tabulates what it finds. There is no partialization to stations, the medium or to any interests involved.

Advertisers and their agents use the data to buy around $21 billion in advertising a year. This would not happen if the yardstick were defective.

Actually, it can. To transmit an analog signal has simply different
requirements than digital, so there are ways of putting a better digital
product, using compression, in a narrow bandwidth. All you have to do is
switch between HD and analog on an AM station to tell.

It's not defective. Nor is it impartial. I thought everyone over the
age of twelve understood this.

I have listened with our engineers and we agree that the difference between
1 channel and 2 is not perceptable to the human ear. In fact, split in
three, the audio is as good as a present day analog FM, if not better (no
preemphasis, for example)

Peter siad he _had_ heard discussion. I have not. Electricity to a major
market AM is petty cash. In many cases, the tower lights draw more power
than the transmitter.

I have never heard anyone who thought the current AM HD sounded worse than
analog. the only itme it sounds bad is with cascading codecs ahead of the
transmitter.

I tis already failing, if about 90% of the listening is age 45 and older,
and about 60% is in unsalable demos. It needs a fix, now.
>
> 1. IBOC can not sound better than analog on local signals for technical

All codecs are ear fooling. they remove non-necessary data to compress.

There is essentially no out of primary coverage listening. Primary signal
zones are not affected.
>
> 3. It their is a problem with the AMBCB marketing it is programming
> related not the technical delivery.

Nope. The issue is that under-45's just will not put up with the audio. many
formats have moved from AM to FM, and found huge increases in 25-44
listening. Bonneville is right now movcin g news talk to FM in DC, Phoenix,
Salt Lake... to get younger isteners who will not use WTOP, KTAR, and KSL
(all of which are the best AM signals in each market) and onters, like Clear
Channel, are following suit.
>
> So where are we at? The industry does not address the real issue of
> programming and instead screws with the technical delivery to limit
> listener choices.

In the case of AM, this is a pure technology vs. age issue. Not a
programming one.

NCEs are measured by Arbitron, but the data is marketed to NCE's by a
separate entity. All the NCE numbers come from Arbitron, and all Arbitron
subscribers have them.

No I'm sorry to say it can not. There are technical reasons why it can't
be what you want. I have not heard the IBOC digital signal but I have
heard DRM that was supposed to be better and it was poor. I do not
expect a different result from IBOC. When the HD 2 radios come out I
will have a listen and give my opinion on the sound but based on DRM I
am not expecting that I will like it. Compression can not make up for
lack of bandwidth. Based on bit rate I would not want to listen to multi
stream HD FM either. HD FM is good for one stream based on bit rate and
you can ague that compression can make up for it but it does not and can
not.

I think you're wrong regarding a broadcast FM channel. 200 kHz is
plenty of bandwidth for a very nice sounding digital signal.

Oh, I could pass a test on the technical aspects of communications as
it's practiced today. Could you? (Rhetorical question - I know you
couldn't.) And I don't mean could you memorize enough answers to
pass.

LOL...the question isn't how Arbitron is partial. The question is how ANY organization or institution of its kind COULD be partial. Do you think that Arbitron works in some weird kind of corporate vacuum, cut off from all of the powerful interests that populate the rest of the world?

If you want to try to sell IBOC in this group, fine. Go for it. But you won't generate much interest or enthusiasm by making us all out to be fools.

No, they were actually created by the Prophet Mohammed while undergoing a desert heat induced hallucination.

Much like you must have undergone in the deserts of California.

Fortunately Mohammed is gone. You, we still have to put up with.

Darned typo!

LOL...the question isn't how Arbitron is partial. The question is how ANY organization or institution of its kind COULD be impartial. Do you think that Arbitron works in some weird kind of corporate vacuum, cut off from all of the powerful interests that populate the rest of the world?

If you want to try to sell IBOC in this group, fine. Go for it. But you won't generate much interest or enthusiasm by making us all out to be fools.

That is a totally different system, not backwards compatible. It's
application is principally shortwave.

> I do not
> expect a different result from IBOC. When the HD 2 radios come out I
> will have a listen and give my opinion on the sound but based on DRM I

There are HD-2 radios out there now. I have several. I can listen to either
HD channel on the staitons with a second channel, and analog as well. They
sound very nice, althogh the receivers currently out there are first
generation.

"Bandwidth" is not a pure function of spectrum usage, as there are issues of
compression and algorithms. And the HD bandwidth is about +/- 15 kHz (same
as analog pre-NRSC)

It is enough for two very good ones, and acceptable for 3 FM analog quality
ones. I have heard two in use, and they sound much better than analog FM.

Eton is aware of this problem and has been mailing replacement
adapters. You have to call them to get one. I received mine a few
weeks ago, and there is a marked decrease in interference - a big
improvement.

Since Arbitron does not provide proprietary research, it has to be totally imparcial because they depend on having as subscribers all the viable stations in every market they study.

There has never been a complaint about "being partial" to one set of interests vs. another since Arbitron started. There have been plenty of complaints, questions and suggestions on methodology and such, and years ago Arbitron created an advisor panel named from inustry sectors based on formats and market sizes that adresses these issues as they arrise.

Further, any subscriber can review the raw data and inspect the operations. In fact, they have a complex of little computer rooms where up to 12 different statins or groups can view their market(s) raw data on any particular day and quesiton any inconsistencies. And those inconsistencies will be reviewed and responded to, up to and including reissuing a ratings book.

Oh, that's right. Any business, service or institution that relies upon
subscribers has to be perfectly impartial. Are you kidding me? And why
do you keep talking about stations, as though impartiality between
stations is the only kind of impartiality at issue here. Arbitron is in
business like any other firm, and subject to all of the same forces,
concerns and shortcomings as any firm. I don't know why I'm even
bothering to explain this...

>
> There has never been a complaint about "being partial" to one set of

If you are correct and Arbitron is the one and only truly impartial
entity in existence, please explain how this came about. Does God
Himself systematically intervene in everyday human events to preserve
Arbitron's impartiality?

>
> Further, any subscriber can review the raw data and inspect the operations.

How do I "inspect" the thought processes of its chief executives? How
do I "inspect" the market influences it is subject to, or any of the
rest of the back end events and processes that eventually result in
data collection?

> In fact, they have a complex of little computer rooms where up to 12

That's not what you said (and I quote)

''3. The listener does not pay for HD.''

You pay hidden costs for advertising when you buy ''brand name''
products (whether you listen to the radio or not). That's worse than
taxation without representation.

You are getting far away from the point.

And that point is that Arbitron does one thing: it measures the size and
composition of radio audiences by the best methods known. These are accepted
polling methods where a census would be impractical due to cost and time
constraints.

All Arbitron does is sample the universe, project into that universe and
issue the data. There is no way to be parcial to any interests, nor is there
any reason. As stated, all electronic measurement is audited by a committe
of users, who are vitally concerned with getting as accurate as possible a
view of reality.

I see no way that Arbitron could be partial to anyone. That would mean they distort the data. That is not possible.

Since we are dealing with verifiable input data, frequently audited, who cares what the executives "think." In fact, I doubt they concern themselves with the market ranks of individual stations, but, rather the concern themselves with being accurate and beyond reproach. Confidence is their only real asset.

What record? You have not submitted anything that remotely suggests radio ratings are not of the highest confidence level within the parameters of a random probability sample. You have an opinion, one which is unfettered by facts.

I can do it. We have about 7 of them.

Don't be absurd. No--I repeat--no business is that simple, especially
in competitive markets. And that's not getting far from the point. That
IS the point. If you nevertheless choose to go on denying the obvious,
that's up to you; but don't think that your denials are deceiving
anyone.

Everyone who answers to them. Everyone they answer to. Everyone beyond
Arbitron's boundaries who might affect/be affected by their decisions.
Everyone who has a stake in "the business". Duh.

It is a different system but with the same issues digitizing analog
information and the same arguments were made for it verses analog. DRM
has same issues of digitization, bandwidth and compression.

> > I do not expect a different result from IBOC. When the HD 2 radios

>
> "Bandwidth" is not a pure function of spectrum usage, as there are
> issues of compression and algorithms. And the HD bandwidth is about
> +/- 15 kHz (same as analog pre-NRSC)

You have to get your arms around the concept that when you transmit
information data rate is determined by bandwidth. The digitization of
analog material acts as a low pass filter on that information. Any data
compression algorithm is an additional filter and is usually a low pass
one. The filter(s) behave best when the information stream or program
material is dilute and behaves the worst when the material is rich or
dense. Everyone is familiar with the varying amount of jpeg compression
you get when working with pictures and how the picture degrades with
the amount of compression. A picture with more compression takes less

time to up or down load and more bandwidth speeds the time to transmit. It does not matter whether the medium is radio or ethernet, or the that material is sound or a picture the concept is the same. It is all information.

If you limit the bandwidth you have to make it up with compression but that comes with a cost of resolution or quality and that's the way it is despite your inability to acknowledge it.

The problem here is that you are trying to sell IBOC on the fact that it results in a higher quality signal reception and I'm trying to point out to you that is impossible based on information transmission theory. In addition to the theoretical problem hardware adds distortion and noise to the program material. Not only is it impossible for digital to sound as good as analog in the same bandwidth but my related experience with DRM sound quality issues where people tried to convince me that DRM would sound better was easily refuted by going to the DRM consortium web page and listening to their examples of transmissions. They were poor quality compared to analog.

There are plenty of web sites with music and some times you can even find the same material digitized at different bit rates. Listening to these will give you a good idea of how the digitizing rate colors the material and whether it is acceptable.

Boston Acoustics. Been out for months and months.

Or are you referring to the design spec 2.0 radios, none of which are out yet. However, you can get HD-2 channels on several of the existing models, including the Polk entertainment center, out in the last month.

> without considering the disadvantages of a heritage delivery system.

And the IBOC proponents totally dismiss the primary advantage of the
heritage delivery system, that is long distance propagation.

Oh, I know. There is no longer any economic advantage to long distance
propagation. But, for most of us, the debate goes beyond money.

The other night I was tuning around and caught a WBZ talkshow about the
tunnel collapse. It was interesting to hear Bostonians give thier opinions
in their own voices. And I know my listening gave no economic benefit to
WBZ or the economy in general or even to myself in particular.
Nevertheless, it was worthwhile.

The radio spectrum is one of our natural resources and ought to be managed
as such. Should every old growth tree in the national forests be chopped
down, even if it benefits some people? There are some national parks in
which hardly anybody visits. Should they be strip mined?

What's the economic value of a clear, starry night? None, really. But we
do make modest restrictions on light pollution despite thier economic costs.

Long distance radio propagation on the AM band is a natural resource which
also deserves some protection.

I don't have any problem with fee based radio and I don't know anybody who
is much bothered by the concept. If some stations want to try to make a go
of it as pay channels, that's fine as long as they aren't interfering with
other stations.

I do find the latest "free radio" campaign disingenous. And that strikes my
conspiranoiac nerve.

>
> The biggest threats are not these IMHO. They are gaming and other options

substitutes.

Yes, but the substitues have only been around for a few years and they're
growing fast. I find these things interesting, at least conceptually. If I
were not so set in my ways, I'm sure I'd be really into them.

Let's not forget censorship. Alot of popular stuff won't pass FCC muster.

I have the impression that radio just isn't very important to the people I know who are in their late teens and early twenties. Of course, that's a subjective impression of a small, possibly non representive, sample but I don't think my impression is totally invalid. Today's young people just don't have the radio habit as young people did in the 60s and 70s. And this is radio in general, not just AM radio.

I'll start telling the kids the radio stations are no longer playing Freebird and Stairway to Heaven every hour.

This thread has gone on long enough without directly addressing the issue of how does Arbitron and the people that use the data stay impartial to the statistical data? The problem with statistical data is you can make it fit your preconceptions. In order to look at data in an unbiased way scientists use blind studies as an example so what does Arbitron and the people that use it do to stay impartial to the marketing data?

I want the version 2 radios so when they do come out post about it.

I sure hope these radios have some type of EPROM in them so they can be
upgraded in the future.

I had a feeling. What's the format? Still doing Mexican Nortena pop
as Radio Tricolor?

I remember it from back a trip to 'Frisco back in 1998

Yes, there's the question of how the data is processed once it's in
hand. There's also the question of why that data, in particular, was
collected, by what means it was collected, when it was collected, and
so on and so on. Even if Arbitron does an outstanding job, it is STILL
not immune to bias because nothing is. Even scientists make no claim to
infallibility--no doubt because once in a while we learn of a study
that WAS juryrigged to promote a particular agenda. The most recent

instance was the South Korean 'expert' on cloning who was disgraced and ultimately even indicted.

He'll have to change to MOLEace. I've only harvested two so far this year. I switched from plunger traps to loops this year, they work far better. The only thing uglier than a mole is a wet opossum.

Um, Beerbarrel, not to rain on your parade, but
Glenn and Metzenbaum weren't the senators
from Ohio in 2004. Glenn and Metzenbaum both
retired in the mid-late 90's, and their seats were
filled by George Voinovich and Mike DeWine.
DeWine took Metzenbaum's seat in a contest
with Metzenbaum's anointed successor (and
nephew) Joel Hyatt. Yes, THE Joel Hyatt of
Hyatt Legal Services ("I'm Joel Hyatt, and you
have my word on it.")

The exchange referenced below is an urban
legend, but it's similar to an exchange between
the two in the early 70's (before my time in
being politically aware):

Where do you get this stuff from? You are falling for Radical
propaganda.

''WHAT THE CIAï¿½S BIN LADEN EXPERT SAYS

The Commissionï¿½s analysis may have drawn on the writings of Michael
Scheuer, who served in the CIA for 22 years, and who headed the CIA
Counter-Terrorism Centreï¿½s bin Laden task force (1996-1999). Scheuer,
who retired in Nov. 2004, wrote two recent books as ï¿½Anonymousï¿½:
Through Our Enemiesï¿½ Eyes and Imperial Hubris: Why the West Is Losing
the War on Terror. (He was unmasked in the Boston Phoenix.)

Scheuer contests the view put forward by George W. Bush and Tony
Blair: ï¿½We in the United States and the West make a mistake when we
argue, as has [New York Times columnist] Thomas L. Friedman, that bin
Ladenï¿½s attacks are ï¿½not aimed at reversing any specific U.S. foreign
policy,ï¿½ or, as Steve Simon and Daniel Benjamin did in Survival in
early 2002, that bin Laden has ï¿½no discrete set of negotiatiable
political demandsï¿½.ï¿½ (Through Our Enemiesï¿½ Eyes, p. 256)

Scheuer argues that Osama bin Laden has ï¿½clear, focused, limited and
widely popular foreign policy goalsï¿½, including:

ï¿½the end of U.S. aid to Israel and the ultimate elimination of that
state; the removal of U.S. and Western forces from Iraq, Afghanistan,
and other Muslim lands; the end of U.S. support for the oppression of
Muslims by Russia, China, and India; the end of U.S. protection for
repressive, apostate regimes in Saudi Arabia, Kuwait, Egypt, Jordan,
et cetera; and the conservation of the Muslim worldï¿½s energy resources
and their sale at higher prices.ï¿½

Scheuer observes that, ï¿½Bin Laden is out to drastically alter U.S. and
Western policies toward the Islamic world, not necessarily to destroy
America, much less its freedoms and liberties. He is a practical
warrior, not an apocalyptic terrorist in search of Armageddon.ï¿½
(Imperial Hubris, p. xviii)

Scheuer wrote, while still a serving CIA officer, ï¿½Bin Laden has been precise in telling America the reasons he is waging war on us. None of the reasons have anything to do with our freedom, liberty and democracy, but have everything to do with U.S. policies and actions in the Muslim world.ï¿½ (Imperial Hubris, p. x) Scheuer goes further, arguing that ï¿½the United States, and its policies and actions, are bin Ladenï¿½s only indispensable alliesï¿½. (Imperial Hubris, p. xi)

WHAT CAN WE DO?

The 9/11 Commission also asked the question, ï¿½What can we do to stop these attacks?ï¿½ It suggested that, while bin Ladenï¿½s campaign had begun in reaction to US policies, ï¿½it quickly became far deeperï¿½: ï¿½To the second question of what America could do, al Qaedaï¿½s answer was that America should abandon the Middle East, convert to Islam, and end the immorality and godlessness of its cultureï¿½ If the United States did not comply, it would be at war with the Islamic nationï¿½. (The 9/11 Commission Report, pp. 50-51)

The Commission produced no evidence that al Qaeda had such a maximalist programme. Michael Scheuer vigorously disputes this view, drawing a distinction between ï¿½the things a Muslim would find offensiveï¿½, and things which a Muslim might regard as an attack on Islam or on Muslims. ï¿½Part of bin Ladenï¿½s genius is that he recognized early on the difference between those issues Muslims find offensive about America and the West, and those they find intolerable and life threatening.ï¿½ (Imperial Hubris, p. 10)

Jason Burke, Chief Reporter for the London Observer, points out in his book Al-Qaeda, ï¿½While bin Ladenï¿½s discourse may be based on an interpretation of Islamic history, his power is derived from playing on the current social, economic and political problems of the Muslim world.ï¿½ (Al-Qaeda, Penguin, 2004, p. 25)

In the case of the Soviet invasion of Afghanistan, bin Laden and other non-Afghan Muslims ï¿½went there to fight the Red Army not because the Soviets were atheists and communistsï¿½ but because of their brutal invasion. (Imperial Hubris, p. 10) After the invasion was reversed, the mujahideen did not continue armed action against the atheist and anti-Islamic Soviet Union. When the grievance ended, so did the mujahideen war.

Scheuer, as already pointed out, argues that Osama bin Laden has ï¿½clear, focused, [and] limitedï¿½ foreign policy goals. The goal is not the establishment of an Islamic fundamentalist state in the US, whatever the 9/11 Commission asserts, but deep change in US foreign policy.

WHAT WOULD MAKE AL QAEDA STOP?

After 11 September, bin Laden said, ï¿½Just as they are killing us, we have to kill them so there will be a balance of terrorï¿½ We will do as they do. If they kill our women and innocent people, we will kill their women and innocent people until they stop.ï¿½ (Cited in Through

Our Enemiesï¿½ Eyes, p. 247, emphasis added)

Intervening in the closing days of the 2004 presidential election, bin Laden told the American people, ï¿½Your security does not lie in the hands of Kerry, Bush, or al-Qaeda. Your security is in your own hands. Each and every state that does not tamper with our security will have automatically assured its own security.ï¿½ (BBC translation). This was translated by CNN as, ï¿½Any nation that does not attack us will not be attacked.ï¿½ ï¿½Usï¿½ is meant to refer to the community of Muslim nations and populations, and ï¿½attackï¿½ has a broad meaning, as former CIA official Michael Scheuer explains.

Writing before the invasion of Iraq, Scheuer commented: ï¿½How will [al Qaeda] recognise victory? Easy, by forcing drastic changes in U.S. foreign policyï¿½ when U.S. and British forces evacuate Saudi Arabia and the rest of the Arabian peninsula; when the United States has terminated all aid to Israel; and when the U.S. and UN embargoes on Iraq are lifted.ï¿½ (These achievements, bin Laden believes, ï¿½will lead inevitably to destruction of Israel and what bin Laden has called the regimes of ï¿½hypocritesï¿½ in Saudi Arabia, Egypt, Jordan, and elsewhere.ï¿½) (Through Our Enemiesï¿½ Eyes, p. 256)

To these goals, one might add the ending of the US-UK occupation of Iraq and presence in Afghanistan.

LEGITIMATE GRIEVANCES

Underlying these demands are legitimate grievances against the West: Western support for Israeli oppression of the Palestinians; the invasion of Iraq and Afghanistan; the brutal sanctions imposed on Iraq (now lifted); and US-UK support for dictatorial regimes in the Middle East. These are immoral policies which should be reversed because they are wrong. So is the policy of ignoring-or supporting-oppression in Chechnya and elsewhere.

It so happens that reversing these immoral policies would drain most if not all of the hatred which fuels al Qaeda. This is how we can stop bin Laden. War, retaliation and violence simply adds to his appeal.

PUNISHMENT OR SURVIVAL

The governments of Britain and the United States can pursue the path of punishment and preventive violence, or they can seek to bring this wave of terrorism to an end. Bringing al Qaeda-style terrorism to an end means, above all, reducing the motivation that exists to carry out terrorism.

This does not mean ï¿½negotiating with terroristsï¿½ or ï¿½capitulating to their demandsï¿½, but seeking justice and human rights for all, including the peoples of Palestine and Iraq.

The answer to terrorism is justice, not more terrorism. London and Washington must also stop practising the terrorism of the powerful -

invasion, occupation, and indirect terrorism via oppressive states.''

When the FCC dismissed the final attempts to get the 1 A clears upgraded to
500 to 750 kw each in the late 60's, they began an effort towards extreme
localism that resulted, in the next decade, in the allocation and licencing
of at least on 1 B on every clear channel in the US. At the seme time,
lesser classes were allowed on the clears, including daytimers and lower
powered fulltimers.

The FCC was showing a policy that virtually eliminated the usage of even the
clears for long distance propagation in favor of local, groundwave reception
for AMs. A look at any of the clears in 1960 vs. 1990 or today will show how
this has populated those channels. The other classes, such as regional and
local channels were never guaranteed skywave coverage and were, in fact,
only protected form local skywave interference in the primary coverge area
at night (known as the interference free zone...).

It has been three decades since the FCC has considered night skywave coverage important. It has been that long or longer since stations themselves considered skywave coverage to be much more than a curiosity. Much of this has to do with the change int he radio model in the mid-50s from having the heaviest AM usage at night (before TV was universal) to today, when AM listening at night is vastly less than any other daypart.
>
> Oh, I know. There is no longer any economic advantage to long distance
> propagation. But, for most of us, the debate goes beyond money.

That is only part of the matter. Would any station be interested in consistent, listenable night audiences, there is declining usage of radio at night, the decline in use of AM by younger listeners and the FCC's own policies that come in the way. Add to that the fact that in may areas, storng international Am interference ruins AM anyway.

Canada is phasing out AM rapidly in all but the biggest cities. This is because they believe there that AM is not the way of the future. AMs are left in big cit9ies to serve niche and minority audiences, like the Chinese stations in Vancouver or the standards station in Toronto.

As I said, the FCC policies going back nearly 40 years have brought us to this point, and, coupled with the "sound" of AM, we have a fait acomplit.
>

The FCC has chosen long ago to discard this as less meaningful than more local service that is relible and consistent.
>
> I don't have any problem with fee based radio and I don't know anybody who
> is much bothered by the concept.

Try talking to people who make below the US median household income...
families that live on $15,000 a year, or, for whatever reason, are on
subsistence programs. Tell them to spend $12 a month for each radio. Free
radio has many benefits, or there would not be 94% of the population using
it each week... and any other alternative further segregates the priviledges
of the "haves" and thes leftovers of the "have nots."

> If some stations want to try to make a go
> of it as pay channels, that's fine as long as they aren't interfering with

There is no talk of this. The model is advertising support, not
subscription.
>
> Yes, but the substitues have only been around for a few years and they're

Satellite has spent 5 years getting to about a half-share of listening. And
it is cooling (withness XM's failure to meet projections and the loss of 60%
f its market capitalization).
>
> Let's not forget censorship. Alot of popular stuff won't pass FCC muster.

I think you overestimate the number of people who want to hear DJs cuss. And
that is what satellite can serve.

Arbitron produces quantitative data. There is no interpretation required.

Use: You want to buy a station for its 25-34 female listeners because that is your ad target. You look at the ranking of stations on this demographic. You see how many average listeners the station has. You get a rate quote. You divide the two to see what the cost per thousand listeners is, and you buy the most efficient deliverers of your target.

Since we are looking at a cost delivery analysis, there is very little or anything to "interpret."

While my example is a simple one (in the real world, a cosmetic might target only women in the age group, and only women who were of a specific ethnicity) it is the basic principle. Arbitron allows you to look at geography, age, sex, ethnicity, and even income levels. All of this is quantitative and requires no interpretation. There is no "why do you listen" question... just "when and to what."

Music on AM for Hispanics only works where there is no FM.

Format is news / talk.

For the last two years, it had been "La Cumbia Caliente 11-70."

> Yes, there's the question of how the data is processed once it's in
> hand.

This is simple. The Arbitron diary (sample at
http://www.davidgleason.com/Research_Arbitron.htm) has people list the times
and stations they listen too in a 7 day period. Arbitron enters each entry
into that market's computer database and then the comuter tabs the data.

> There's also the question of why that data, in particular, was
> collected, by what means it was collected, when it was collected, and
> so on and so on.

The data collected is every instance of radio usage by staiton (whether by
calls or name or frequency or other unique identifier)

There is a near equal number of diaries distributed in each week of the 12
week survery period. excess ones are recruited to compensate for those who
will not return them. Followups have shown the usage of radio by
non-returners does not vary form that of returners.

The reason why the data is collected is to see what people listen to and
when and when they use and do not use radio.

> Even if Arbitron does an outstanding job, it is STILL
> not immune to bias because nothing is.

Since the data is quantitative, it is hard to find a significant bias.

> Even scientists make no claim to
> infallibility--no doubt because once in a while we learn of a study
> that WAS juryrigged to promote a particular agenda.

As I said before, radio ratings are a poll and as such, have a totally
calculable margin of error based on sample size. The margins are considered
acceptable by the users of the data, meaning the stations that pay for it
and the agencies and advertisers who get it to make ad buying decisions by
purely quantitative methods.

> The most recent
> instance was the South Korean 'expert' on cloning who was disgraced and
> ultimately even indicted.

Cloning has moral implications. If we go to the quantitative part, the fact
was the research was not done. Arbitron is audited. All clients can do their
own audits. There has never been any "issue" based on failure to do what the

approved methodology demanded.

Thank goodness I live in the desert. I only have to worry about earthquakes coming from underground.

How does MOLEace cook the moles he catches? Broiled? Or Chicken fried mole.

"David" <rickets@knac.com>
>
[ejaculatory communist propaganda castrated]
>

Voices in the Wilderness is a member organization of the United for Peace
and Justice anti-war coalition (a network of communist front groups)

http://www.discoverthenetwork.org/groupProfile.asp?grpid=6166

which is led by Leslie Cagan, a longtime committed socialist who aligns her
politics with those of Fidel Castro's Communist Cuba.

http://www.discoverthenetwork.org/individualProfile.asp?indid=629

VW conducted regular trips to Iraq to deliver medical and other supplies,
all in violation of the U.N. sanctions regime as well as several U.S. laws
and Presidential executive orders. The quantity of aid that Voices brought
to Iraq was more symbolic than substantive; the real emphasis was to have
group members "witness" the detrimental effects of sanctions for themselves,
by visiting Iraqi hospitals, schools, and other areas-always in the presence
of official "minders" of the Iraqi regime. After being schooled by spokesmen
of Saddam's regime about the deadly toll that sanctions were taking on
Iraq's population, VW volunteers returned home to convey these sentiments to
audiences all across the United States.

Almost without exception, the founding members of VW were drawn from what
has been dubbed the "Catholic Ultra-resistance" -- those Catholic radicals
sympathetic to the Catholic Worker movement's doctrine of nonviolent
resistance and the personalities of Dorothy Day, Thomas Merton, and,
especially,
the radical priests Daniel
http://www.followthenetwork.org/uidev/personsDetail.cfm?pid=1567&keyword=
and Philip Berrigan.
http://www.followthenetwork.org/uidev/personsDetail.cfm?pid=1566&keyword=

Former VW member Charles M. Brown, who has since come to view the
organization as irresponsible and duplicitous, later acknowledged: "To be
perfectly frank, we were less concerned with the suffering of the Iraqi
people than we were in maintaining our moral challenge to U.S. foreign
policy. We did not agitate for an end to sanctions for purely humanitarian
reasons; it was more important to us to maintain our moral challenge to
'violent' U.S. foreign policy, regardless of what happened in Iraq. For
example, had we been truly interested in alleviating the suffering in Iraq,
we might have considered pushing for an expanded Oil-for-Food program.
Nothing could have interested us less. Indeed, we even regarded the paltry

amounts of aid that we did bring to Iraq as a logistical hassle. . We were so preoccupied with our own agenda that we didn't notice or care that the regime made use of us. When critics asked us whether the group was being exploited by the Iraqi regime, we obfuscated, and in so doing put Saddam and his minions on the same level as the U.S. government."

Because travel to Iraq was central to VW's activities, the organization was wholly dependent upon the regime's good graces to gain necessary travel permits and visas to enter and travel throughout the country. Thus VW had to remain silent on such significant issues as Iraq's human rights abuses, genocide, and especially its refusal to comply with the disarmament requirements of UNSC resolutions 687 and 1441. Until about 2000, there was a policy within the group explicitly barring its members from publicly criticizing the Iraqi regime.

Quantititative data can turn out to harbor enormous biases if you look
at the processes BEHIND the collection of the data. Science is much
more than a collection of data, my friend.

What does this have to do with anything? This scientist wasn't
disgraced because he claimed to discover the cloning is wrong, right or
anything in between. He was disgraced because of his handling of
perfectly measurable, quantifiable data. How do you think he was caught
in the first place? I wonder how many like him do not get caught.

If we go to the quantitative part, the fact
> was the research was not done. Arbitron is audited. All clients can do their
> own audits. There has never been any "issue" based on failure to do what the
> approved methodology demanded.

So what? What about the biases in the audits? You just keep digging
your hole deeper and deeper.

Like I said, if you want to sell, sell, but I'm not buying. Kindly sell
your snake oil further down the road.

That's a half-truth and you know it. As consumers we DO have to buy a great many things. If the product is advertised on the the radio, then the cost of that advertisement is factored into the bottom line, and therefor the cost of the product to the consumer. Quit trying to blow smoke up our asses. Nothing in this world is ever free. Even so-called NCE stations receive tax dollars either directly or indirectly, so we're all paying for those as well.

Surprisingly few, these days, actually. Most Non-Coms exist by
listener support, corporate grant, and CPB funding.

But very little actual tax money.

That's one reason why Non-Coms frequently have such fine facilties.
They don't have to survive on ratings based advertising revenue streams.

what biases are there in asking a person to record what they listen to? The
fact that the Portable People Meter, in its 5th market test now, shows
essentially the same lsitening levels with a totally passive measurement
(like the black box in an airplane, in fact) shows there are no biases in
recording the data. There can be none at the tabulation level, because it is
pure data keying, is verified, and not subject to anyting but very minor
error.
>>
>> As I said before, radio ratings are a poll and as such, have a totally

> Of course the margin of error is calculable ASSUMING that the
> underlying methodology is SOUND.

A random probability proportional sample is the most standard, clearcut and
bias free sampling technique there is. The methodology is to get a close to
perfect sample,a nd compensate for minor varinces by mathematical weighting,
which has no human intervention.

>>
>> Cloning has moral implications.
>
> What does this have to do with anything?

You picked a bad example of a single individual who was dishonest, dealing with a charged issue. Arbitron is many thousands of people and millions of respondents and an outside auditing committe plus audits by subscribers. Radio listening is a "count 'em" function.

> If we go to the quantitative part, the fact

How can there be a bias? the audits are done by a team, and the purpose is to determine if proper sampling techniques, in agreement with the accredited methodology are being used.
>
> Like I said, if you want to sell, sell, but I'm not buying. Kindly sell
> your snake oil further down the road.

I don't know who you are. So you have me at a disadvantage. I do know who the heads of all the major broadcast groups are, I know who audits Arbitron, I know the Arbitron folks and I know who the agencies who buy radio are. Based on sheer number of interests and people, Arbitron biases or defects would not go unchallenged for more than a month!

While IBOC is a piece of crap, your statements simply are not true.
Nyquisting sampling yields flawless recording/reproduction of a
bandlimited signal. You can check out this wiki:
http://en.wikipedia.org/wiki/Nyquist-Shannon_sampling_theorem
While you can't always trust the net, this wiki is more or less the
standard blurb you get in any engineering text on signal processing.

Now technically, the samples are discrete in time but of infinite
resolution. Real life systems have a finite bitwidth, which in turn
sets the noise floor. Beyond that, real life systems don't have perfect
data converters, so distortion is introduced. The clocks have jitter,
blah blah blah. AM transmitters are not perfect either.

The problem with IBOC is the high level of digital compression. If a new band was created, it is quite possible to have superior digital broadcasting.

You know what I meant. To listen to the radio, you do not have to agree to
buy anything. You can buy or not buy at your option.

> If the product is advertised on the the radio, then the cost of that
> advertisement is factored into the bottom line, and therefor the cost of
> the product to the consumer.

Any marketing costs are. So is shipping, spoiled goods, labor, raw
materials. That is not specific to radio however, and thus irrelevant here.
those who offer goods and services have to use some method of letting
consumers know of their existence. But this cost is not caused by raido,
but, instead, by the need to engage in marketing.

> Quit trying to blow smoke up our asses.

Is there some reason you have to use vulgarities? That ususally means the
person so engaged has lost the argument.

> Nothing in this world is ever free. Even so-called NCE stations receive
> tax dollars either directly or indirectly, so we're all paying for those
> as well.

But these costs are not a consequence of listening to the radio... they are marketing costs that would be the same even if the advertiser never used radio.

SWL's should learn CW too.

You never know when you might stumple across a station in distress sending
an SOS and you might be the only one that hears it and can get help.

But it seems all SWL's want to do is sit around like blobs all day long
and tell themselves their cheap plastic Etons and Grundigs sound good.
They don't want radio skills if it takes a little work to learn them.

I'm guessing that's why Telamon hates CW and ham radio as well. Laziness.

Really?

http://www.ntia.doc.gov/ptfp/

The corporations and individuals get a tax break for contributing.
These funds must be made up elsewhere. Don't get me wrong, I'm a big
supporter of publicly funded media (it's purer) but don't blow smoke
up my ass about who pays for it.

All costs of doing business are expenses and figure into the cost of all
goods and services. As to individuals, the tax codes are structured to
encourage private persons to engage in philanthropy. This, as I have said,
has nothing specific to do with radio.

SWL's normally listen to AM stations.
How would they hear a CW station?

You aren't particularly good at listening to other people and
comprehending what they're saying, are you?

Who is asking the questions? Why those questions? What interest might
the questioners have in the outcome, and so on and so on and so on and
so on ad nauseam. Yawn.

> broadcasting.

I use digital audio all the time. I have a vast library of high bitrate mp3 files. But physics will always out. It is not possible to get a perfect reproduction of a complex waveform when converting analog to digital. Here's why:

Let's say you clock a single bit ADC at 256 KHz. Now assume a 256 Hz sine wave (just for ease of doing the math). This means that each cycle will have just 100 points where the waveform is plotted. These plots are square waves that come out as steps approximating the voltage at given points on the waveform. This would be 50 such points on either side of the zero volt line. With filtering, you can get a reasonable sine wave output at a single frequency by filtering the orignal clock frequency out. But for every additional frequency added, and the more complex the waveform becomes, the less likely you will obtain an accurate (even to the ear) reproduction. For instance, a 10KHz waveform will have only about 26 plotting points per cycle, only 13 per half cycle. You are just about as likely to get an output of 20KHz or 5 KHz from that few samples.. and with a complex waveform such as music, you get all manner of spurious output frequencies (artifacting).

Now, again, with decent filtering, you can at least cut the artifacts at frequencies above the audible range, and it can come out sounding fairly good.. but it will never be, nor can it ever be, a perfect representation of the input waveform, but something that looks more like a staircase on a rolling hill.

Now, you add in compression codecs. Yes, there is a lot of redundant data when you convert an analog signal to digital, but there is a limit to how much you can compress it and still retain even most of the original waveform. The more compression used, the less representative of the original analog signal your output will be. What sounds acceptable at 160Kbit sounds like crap at 16Kbit.

Let me state this again: the Nyquist sampled audio will be perfect.

Sampling theory requires perfect impulses to be fed to a perfect
bandlimiting filter. In real life, square waves are fed to a filter
that not only bandlimits, but has an inverse sinc response. In your
artificial example, the sine wave will be reproduced perfect with the
right filter as it meets the Nyquist bandlimiting criteria.

All bets are off once you start to use compression. It becomes a
totally different argument. My point is there is nothing wrong with
digital audio. What you do with the signal is another story.

Nobody is asking questions. The Arbitron diary is self-administered. The only thing that is verbal is recruiting. At that point, everything is done via the diary, including the questions that identify age, sex, ethnicity, language preference, work and home ZIP, etc.

Yawn is right. You did not know what the methodology is.

Since radio ratings are purely quantitative and there is a huge amount of testing to make sure there is no bias in the diary itself (things like simultaneous samples with different wordings) the effect of bias is insignificant to the results.

3141. Freeplay Lifeline Radios on Sale

Newsgroup: rec.radio.shortwave
Date: 2006-07-20 01:03:41 UTC

C.Crane has the Freeplay Lifeline radio on sale for half price this
week ($49.95, normally $99.95). This set runs exclusively on solar
power or wind-up energy, and never needs batteries or electricity.
Also, for every Lifeline radio you buy, C.Crane will donate one to the
Freeplay Foundation to help third-world disaster victims and African
orphans. Go to http://www.ccrane.com for more info.
I have a Freeplay Plus radio and really like its sound and build
quality.

On the contrary, I was exactly right about what the methodology
presupposes, and that is ALL that matters in this context.

> >>

Really, they NEVER have other interests? That's absolutely astounding.
How was this achieved? Where do these people come from? Why can't the
CIA recruit this effectively?

> >>

And are there tests that test the tests for bias? And who administers
these tests? What stake might they have in the outcome. And so on. And
so on.

It has been under constant development with ongoing blind testing for 46
years. I'd assume a staff of research specialists would knoow enough to
avoid biases induced by language usage, language complexity and such to have
pretty much eliminated bias after all this time. The real proof is taht
totally passive measurement via the people meter yields near identical
results.
>

A random sample which is a microcosm of the universe produces input from
individuals in near perfect proportion to the occurance of such behaviours
from the entire universe. Replication studies prove this, by repeating
simultaneously the same test with different radom groups.

Probably because the CIA is public sector and bound by public secotr
restraints. In the ratings, the advertisers simply look for the best
possible persons.

None of this gets you infallibility. The possibility of bias remains,
as it always does, no matter how thorough and diligent people are about
avoiding it. It's a fact of life, and it remains a fact of life even
for those who prefer to stick their heads in the sand.

That has nothing to do with the underlying methodology. In this context
it's completely irrelevant.

And you know, I'll bet you can just tell....just by looking at
them....that they could NEVER, EVER fall victim to the kinds of biases
that dirty people like you and I are susceptible to. LOL!! Please think
next time before hitting the "post message" button.

Not necessarily radio australia doesnt broadcast properganda it
broadcasts what the ABC broadcasts basically and its got complaints from
the current govt of "anti-governent and left-wing bias" so no it isnt
like that.But VOA makes all its programs as properganda which wouldent
annoy me if they didnt claim to be a reliable news source.Im not the
only one who thinks its sucks.Here is what my friend said about the VOA
service.
Most people just ignore VOA rather than give it the time of day, it
used to have a purpose but that died with the cold war.

That sums it up, i heard that VOA is going to wind up its english
service soon.

Good riddance

Yours truly
Adam

As I keep saying... the data is adequately reliable for its intended
purpose. Making it any more precise costs too much money to be a viable
option.
>>
>> Considering that in this case, there is no interest in anything else but

No, I am talking about a product that is as accruate, unbiased and
professional as is possible tobotain within the money that can be justified
to pay for such research. the fact that Arbitron has never had an
investigation, scandal, indication of impropriety or similar in 46 years

kind of proves this.

And remember, there is always a group of stations that is angry at Arbitron because they went down and don't want to believe it is thier own fault. So the data gets picked apart constantly.

I am sitting on a beachfont patio of the El san Juan Hotel right now, amusing myself as my traveling troupe wraps up the data on a hundred or so listener interviews.

In fact, yes, the possibility of bias remains. And the one thing about science is that it CAN be and often IS, corrupted.

That said, subscribers to Arbitron have the right, and frequently take it, to inspect the raw data, and, if need be, contest it. It's this transparency that acts as insurance against biases that can tilt results. And I've worked at stations that went to recanvass the diaries every survey period. And there have been books that have been contested, and at least once that I know of, reissued throughout the history of the service. Few, though they be. VERY few.

Further, the competitive nature of Radio is such that, if a station is trying to load the diaries through on air descriptions of Arbitron methodology, certain kind of survey period games, or other Arbitricks, you can bet that other stations in the market report this anomalous behaviour with a vengeance, and delist an offending station. And stations get de-listed all the time.

It's true that no system is infallible, but few are as open as Arbitron for inspection and ability to contest. If there are anomalies to be discovered, you can bet it will be a group of stations whose

revenue streams depend on the results discovering them. In the end, it's the transparent nature of survey that permits the data to be trusted. The conclusions...well...now, there by hangs a tale.

But the Arbitron surveys are not for the benefit of the stations, anyway. The surveys are for the benefit of the advertisers and their agents who buy those stations. You want to talk about manipulation of data? No one plays havoc with the numbers like an advertiser trying to depress a rate.

> survey period. And there have been books that have been contested, and at
> least once that I know of, reissued throughout the history of the service.
> Few, though they be. VERY few.

The policy is if an error is detected that materially affects the ratings,
they get reissued. The most common one is where the overall ranking changes
after correcting an error.

Most of these errors are very monor, and do not change a share by even 0.1%.
But, occasionally, one will happen and Arbitron reacts instantly.

I am one of the few to have gotten two separate books reissued and the only
person I know of to have gotten a trend reissued. In all cases, the issues
were handled fast and with great courtesy, and even appreciation.

One would think that each time I visit Arbitorn, which is 3 to 4 times a
year, I would be seen as the devil incarnate. The truth is exactly the
opposite. I get face time with the department heads if I have questions, and
am given every courtesy. THis, to me,. says they are going out of thier way
to do a good job.
>
> Further, the competitive nature of Radio is such that, if a station is

> de-listed all the time.

You bring up an interesting point... ratings distortion and bias as created
by a station. Stations that attempt to influence diarykeepers are sanctioned
with the worst penalty of all if the violation is serious... they are not
listed. Smaller violations are noted with an astersk, and the idea is that
time buyers will quesiton the strength of the numbers. Such violations are
rare, and also handled fast. As you say, competitors notify Arbitron very
fast... such as one station I kow of that wes trying to buy diaries at
remotes. They got the mother of all lawyer letters.
>

> It's true that no system is infallible, but few are as open as Arbitron

> conclusions...well...now, there by hangs a tale.

Since the significant statins in any market depend on the ratings, and
Arbitron is the only game, they tend to respect the rules, which are int he
contract and legally enforcable.
>
> But the Arbitron surveys are not for the benefit of the stations,

> data? No one plays havoc with the numbers like an advertiser trying to
> depress a rate.

Ain't that the truth. when there were more than one surveys, agencies always
bought from the book where you looked the worst. It's their job.

> The best you can do is get a reasonably close APPROXIMATION or FACSIMILE
> of the

What comes out of your speaker is only an approximation or
facsimile of the original regardless of whether the system is
digital or analog.

> analog signal if you have a high enough bitrate AND sampling rate. It
> would be physically impossible for a digital reproduction system to
> perfectly reproduce a complex analog signal (or even a sine wave) out of
> smaller and smaller square waves.

It is physically impossible for an analog system to perfectly reproduce
a complex analog signal.

In many instances it is possible to produce a better facsimile of
the original signal using 'square' waves than with an analog system.
Do you own a CD player?

>
> AND
>
> You can't get anything like a high quality reproduction out of a 7 KHz

What do you mean by 'high quality'? If you mean 20 kHz audio
with a 70 dB SNR through a typical MW channel, generally you are correct.
But AM broadcast is 5 kHz audio with a highly variable
SNR. That is easy to beat digitally.

> digital bandwidth on an AM IBOC channel. It doesn't matter what logarithm
> is used, you are going to LOSE frequency response, dynamic range, and
> waveform accuracy using any sort of digital codec to represent an analog
> signal. Even

With any analog system you are always going to lose
frequency response, dynamic range, and 'waveform accuracy'.
Digital is often superior.

> 64Kb mp3 is considered garbage for most purposes, and you try to convince
> me (and others) that a 7 KHz stream is as good as FM quality? The laws of
> physics call your bluff.

The laws of physics allow a 7 kHz stream to deliver FM quality
audio. The IBOC design and/or typical propagation might not
provide that, but physics is not the limitation.

3172. Sony 2010 vs Eton E1

Newsgroup: rec.radio.shortwave
Date: 2006-07-20 06:48:27 UTC
From: John Plimmer <plimmer@telkomsa.net>
Message-ID: <e9ncrn$hs2$1@ctb-nnrp2.saix.net>
Source record: 84310

I refer to Guy Atkins interesting side by side of these two receivers:
http://www.sdr-1000.blogspot.com/

His review clearly puts the E1 head and shoulders above the 2010.
This surprised me a bit as having owned a 2010 my impressions of it was that it was a lot more sensitive than any of the other many portables I have owned.

But in his addendum, Guy highlights if this might not be a mismatch of the 50 Ohm antenna system used not matching the Sony, but matching the Eton perfectly.

I agree that this is a likely explanation, as a ham pal of mine used to build matching transformers for Sony portables and found they had no standard Ohmage input into their antenna sockets. He used a test method and meter to ascertain the exact match and it varied through different models of Sony and was nowhere near a standard 50 Ohm input.

So in Guy's test it is likely that the 50 Ohm antenna into the 2010 was a mismatch and that would lower its sensitivity, hence the poor results.

I don't agree with this thread. As a listener in the Third World that is hysterically pro Palestinian, it is important to get the official view of the American government, the most powerful country in the World.

It is refreshing to get the official American government point of view from VOA with sound bites from George W Bush.
Even the BBC to my mind is somewhat biased towards the Palestinians.

So the VOA provides balance to my listening where I can learn of the atrocities and provocations the Palestinians heap upon the Israeli's.

Digital audio is compressed in two manners. I'll put lossless
compression in your category of what physics allows, though mathematics
is more like it. Once you get into psychoaccoustics (the other
compression basis), you have left the field of hard science and are now
in the cast in jello world of human perception.

I have never heard a 7kbps stream as good as FM BCB. In fact, there
isn't a telco system with a bit rate that low.

Telamon - True and the simple fact is :
Governmental International Shortwave Broadcasting 'is'
all about Getting-Your-Message-Out 'to' The World [.]
http://www.shortwave.be/gov.html

Actually at times it seem (to me) that the VOA goes
beyond fair-and-balanced -and- actually sounds like it
is apologizing for BEING "The Voice of America" !

I listen to Deutsche Wella (DW) to hear News from Germany
with a German and European 'perspective'.
http://www.dw-world.de/

I listen to "Radio Habana Cuba {RHC} to hear the News from
Castro's Cuba with a Communist and Anti-America 'perspective'.
http://www.radiohc.cu/ingles/portada.htm
- - - Include Radio China Radio International (CRI) and
The Voice of {North} Korea to this 'perspective'.
http://en.chinabroadcast.cn/
http://en.wikipedia.org/wiki/Voice_of_Korea

I listen to "The BBC" to hear News from "The UK" with
an English and America's Closest Allie 'perspective'.
http://www.bbcworld.com/
http://news.bbc.co.uk/

- SWL's normally listen to AM stations.
- How would they hear a CW station?
> --
> 73, Cecil http://www.qsl.net/w5dxp

CM,

Yes - Many Shortwave Radio Listener's (SWL's) do just that.
Listen to the best "AM" International Shortwave Radio
Broadcasters that they can 'hear' at their location.

and morse code is not on their mind ~ RHF
{ just like 'html' is not on my mind as i simply
type these words on rrs }

- When the FCC dismissed the final attempts to get the 1 A clears
- upgraded to 500 to 750 kw each in the late 60's, they began an
- effort towards extreme localism that resulted, in the next decade,
- in the allocation and licencing of at least on 1 B on every clear
- channel in the US. At the seme time, lesser classes were allowed
- on the clears, including daytimers and lower powered fulltimers.

DE,

435 Congress Persons 'each' with a Local AM Radio Station
in their Home District that is Adding to and Building the
Local Economy are Clearly More Important then 25-50
'select' Congress Persons with one Clear Channel AM Radio
Station monopolizing the marketing for an entire region.

Well there is a real news alert. Spread the word.

> In many instances it is possible to produce a better facsimile of
> the original signal using 'square' waves than with an analog system.
> Do you own a CD player?

When I was a few years old my parents got me this plastic toy bench that
came with a toy hammer and various shaped object pegs. The object was to
tap a peg into the hole in the bench of the same shape. In order to be
successful one had to tap those pegs into the hole designed to accept it
until all pegs were in the similar their same shaped hole.

I never tried it but I imagine that if you got a real hammer you could
force any shape peg into any shape hole.

> > AND

SNR is not what was being discussed, it is the ability of an analog
circuit to follow an electrical voltage waveform that represents the
audio information compared to a digital quantified representation of the
same and the effect of the digitizing rate.

> > digital bandwidth on an AM IBOC channel. It doesn't matter what logarithm

It is the meaning given by vasconcelos, the brilliant writer and philosopher
who said that a cosmic race ("raza c&#65533;smica") would emerge, in which there
were no color lines and all were members of one race.. the human race.

```
"Raza" in Spanish means race as it doe sin English, but it aso means: breed
(as in horses, dogs, etc), brotherhood (as in commonality of a group),
people (as in "we the people") and even a crack in a piece of marble. Today,
among Mexican immigrants, "raza" means brotherhood primarily.

In that case the AM carrier is the BFO for the CW signal.
How many SWL's are going to accidentally "detune it right"
for the purpose of hearing an SOS?

Most folks soon discover that La Raza is a very bigoted organization. Do a little research.

Frankly I'm surprised that the would allow a non-Hispanic such as yourself to join.

Did you join La Raza about the same time that you became a fake Hispanic (c.2000) and began using the 'Eduardo' shtick?

You can hear the change in noise as a carrier goes on and off. It's
extremely difficult to copy high speed CW like that if the signal is
strong, but a weak signal or slower CW is just as easy to copy as
noise as it is to copy as a pure tone. T1 doesn't mean uncopyable, it
just means ragged tone.

So now amateurs and SWL's should be Morse code proficient
not only using tones but using the swishing sound made when
a BFO is not present?

I picked up a RMA69 receiver a few years ago. Looks to be in very good overall condition, but will need some power supply work before I dare to plug it in. Anyone have suggestions where to find information on the receiver? I haven't had any luck with online searches. It seems as if this thing was abandoned and forgotten about decades ago.

Any suggestions please email me,
warrens at ns.sympatico.ca
vo1ks at rac.ca

Thanks

Why is it necessary to ad insult and invective to a discussion? Do your
neighbors punch you out often?

There is no perfection in _anything_ in business. But Arbitron is "perfect
enough" for its purpose, and is essentially devoid of all the objecitons you
made based on abysmal ignorance of the survey methodology.

I have said all along that any poll is done to minimize the cost within the
acceptable margins of error. In fact, one of my earliest statements was that
"statistics is the only science where 'error' is not a dirty word." All
polls short of a census have a margin of error that is predictable.

Your statements about bias and such are irrelevant, and simply indicate a
lack of understanding of how radio ratings work.

Huh? We do proprietary research on music and program content. You, consequently, have no idea about or any knowledge of how we do it. The only thing you can see is web -accusable measurement of how effective it is...

alt.radio.broadcasting is a pretty dead group. Most AM & FM radio discussion
is on www.radio-info.com.

However , the HD discussion came up here, and I think it important, and fun
most of the time, to see the impressions of HD from a different
perspective... most of which here seems to be, as natural, how it interferes
with the activities of DXers and not on its benefits to the radio industry.

adam wrote:
> How does the SSB work on the ats-505?.

If you're asking _whether_ it works, it's not sophisticated, but it _does_ work well enough to tune in an SSB signal and understand it. I've used it to listen to radio amateurs, military and other stations just fine -- its bandwidth is too wide for serious communications work.

As to how to use it: To select SSB, you use the FM - FM Stereo/ SSB - AM switch on the right side, and fine tune with the clarify control, also on the right side. Be sure to start out with the clarify thumbwheel in the center position (there's a notch that you can feel when it's centered). The tuning LED turns red to let you know that SSB is selected. You push in on the tuning knob (left side) to change from the normal 5 kHz to 1 kHz tuning steps.

If you troll a newsgroup you're going to get flamed. Nothing surprising
there. If you can't stand the heat, don't walk into the kitchen.

>
> There is no perfection in _anything_ in business. But Arbitron is "perfect
> enough" for its purpose, and is essentially devoid of all the objecitons you
> made based on abysmal ignorance of the survey methodology.

"Perfect enough for its purpose" could be said of many institutions
that are biased. Don't start changing your story again, please. And
don't pretend as though the only kind of bias at issue here concerns
the "survey methodology" because it concerns everything leading up to
the survey, the design of the survey, the structure of Arbitron, the
people at Arbitron, their relationships with other people outside
Arbitron, relationships between Arbitron and other organizations, etc.
Arbitron does not operate in a vacuum. No business does. None. Get your
head out of the sand.

Your statements about bias and such are naive, and simply indicate a
lack of understanding of how subtle and ideological bias can be.

I see no evidence of your doing any work at all. You seem to spend all
your time trolling newsgroups.

You might want to check alt.radio.broadcasting again. I see plenty of
posts there from this week. Maybe things are starting to hop over
there.

My guess is you saw it for what it is: an easy opportunity to generate
some kind (any kind) of controversy. That's what trolls do.

That still does not answer the question. You, perhaps, just enjoy being
rude.

I did not invent HD. I believe it is a solution for free radio. It is not
going away.

Mr. Maus offered some cogent suggestions on what to do if you object to HD,
none of which include flaming those who point out the reality of the
situation.

By the nature of the job, which spans 4 time zones, I have considerable time
in airport lunges, waiting for respondents to arrive, etc. Our usual days
are 18 hours of work.

You asked why I added insult and invective to the discussion. My
answer: Because you're a troll and deserve such treatment.

Clear enough for you?

>
> I did not invent HD. I believe it is a solution for free radio. It is not

You seem to have only the slimmest grasp on reality, given your posts
to this group. As for flaming, if you don't like it, don't be a troll.

Simple.

I might have to try the loops when/if some new
housing development starts up near us. All of
the moles in the woods are going to want to go
somewhere...

> what is a vole?

For practical purposes, the main difference between
a vole and a mole is that a mole won't come above
ground at all (or seems to never come above ground).
A vole will occasionally skitter around above ground.
Aside from that, they look a lot alike to the casual
viewer.

A cat took care of my vole for me when the vole
decided it wanted to wander around by the viburnums
that I'd planted last year. It's days were numbered
anyway, since I'd noticed around that time that a
hawk was taking an interest in our backyard.

Good news to report here today regarding IBOC (promoted by 'tards such as Edweenie) on 780 WBBM Chicago is CURRENTLY OFF!!

I can listen to 790 WSGW Saginaw (MI).

P.S. Stuff your panty hose in it, Edweenie!

What war?

KE4ODD

Service to my country? Me too and I've got my DD214 and 5 point veteran preference to prove it.

no you are worng CW gets through wether you to hear or not (prehaps I
should say sarcasm on)

If you can copy CW, you can copy CW. The tone it's coming in with
doesn't make much difference. I've copied signals so weak that they
were just changes in the quality of the noise and I've copied perfect
S9++T9 signals. They were all mostly R9. The R only changes if the
signal fades completely out or if there's interference that masks the
signal. Try that with PSK.

Isn't the subject line "Re: Digital Quality is an oxymoron"?

SNR doesn't figure in quality? Can you give an example of good
quality with a -90 dB SNR?

Hmm. Then why does anyone ever use digital? Why do they
use digital coding on CDs? Why don't they use an analog format
like used to be done on movie films?
Why do cable TV companies charge more for digital TV?
Why would anybody pay for it if analog is better?

I believe 128 kbps mp3 gives about FM quality. Code
18 bits into one channel symbol using QAM. Then your
symbol rate/bandwidth is under 7 kHz. (Granted you will
need an SNR of about 60 dB or better comming out of the channel
in order to be able to decode it.)

Who was leading who on this? That is did the FCC decide out of the blue to
deemphasize the clear channels or was it other stations who wanted to
operate at night?

And why would they want to operate at night, anyway?

Is the Canadian phase out voluentary?

By the way, I happen to like listening to the brokered /ethnic stations. If
that's all that's someday left on AM, AM will still be quite lively.

>
> But you could also get WBZ on the web, right?

I wouldn't have known what was on if I was a web listener. That night I had some free time and I was checking propagation. KDKA was audible, but uninteresting. WBZ was clear. WHO was in the noise. WBZ was interesting enough so I stopped there.

I suppose I could something like that on the web, but I find net congestion less charming than fading.

> You are not being deprived of
> the message, just one medium.

Exactly. And the medium is fascinating. It's a fascination I've had since I was 10, tuning into cities I was newly learning about. I had no references to stations and frequencies and I puzzled out which cities were coming in by ads, weather and traffic reports and the local news.

I'm sure I developed my passion for radio at that age. A guy I once knew told me about a road trip he took when he was about 20. He was amazed that he could hear WLS pretty well all the way out to St. George, Utah. Yeah, I explained, radio's like that. And sometimes reception will be lousy. But mostly it's magical. He tried to repeat the magic on his next road trip a few years later. Too much interference, too many stations. Needless to say, he'll never develop the same passion for radio. Ahh, he was probably to old at the time, anyway.

I know I'm not the only person with the passion for radio, this group's full of 'em. But I also know we aren't numerous enough to have an economic impact on the broadcast industry. I suppose we're mostly a pain in the ass to you guys, acting like we get a sharp stick in the ear every time we hear the Din of Ibiquity.

To take away radio's long distance propagation is diminishing a national resource. It turns radio into a mere conduit for the broadcast industry. It takes the magic out of radio.

> The radio spectrum is one of our natural resources and ought to be
managed

> local service that is relible and consistent.

I see. It's all the FCC's fault. I suppose that's another one of their
silly decisions like when they were forcing stations to do "editorials".
So, how long has the broadcast industry been fighting them on this?
